

ORIGINAL

OT 6

OT 6

Familiarisation as a Thetan Exterior with the Physical Universe.

Reference: Creation of Human Ability Route One.

Before doing the following solo processes, listen to the tape recorded lectures called "Route One of Intensive Procedure".

Note - If you have a feeling of reduced havingness during any one of these processes, mock up eight anchor points and push them into your body.

NEVER DO THESE PROCESSES OVER OUT-RUDS.

The following processes are run to

- 1) floating needle,
- 2) major cognition,
- 3) regained ability

STEP ONE

1. Be three feet in back of your head. If you have any trouble with this command, use "Try NOT to be three feet back of your head".
2. Whatever you are looking at, copy it a dozen times (copy means to make another one just like it). Now dispose of these copies in some way. eg. You can push them all together and pull them in on yourself to supplant havingness. In any event DO NOT leave yourself with these copies. Dispose of them in some way. Locate a nothingness around you and make a copy of it. Repeat a dozen times. Dispose of these like you did above.
3. Find two back corners of the room and hold onto them for two minutes.
4. Find two locations or positions on Earth and hold onto them for two minutes.
5. Find some places where you are not. (Repeat)
6. Spot three spots in your body and Spot three spots in the room. (Repeat)
7. Be in the following places: The room, the sky, the moon, the sun.
The above steps should be done to a Major Cognition or ability regained. Repeat until this occurs. Write it down.

STEP TWO

The following steps are done in your auditing room lying down with your eyes closed.

8. Mock up your own body until you slip out of it.
9. Locate an animal. Postulate it moving from one spot to another. Observe it doing this.
10. Find a walking man — postulate his walking faster. Repeat this with 20 people.
11. Find a walking person — postulate that he will stop, then continue walking. Do this 20 times.
10. Find a person in a distant land. notice the time of day. Notice the terrain. Notice the general environment. Smell the air. Locate a thought that is his. Locate a thought that is yours. Continue until flat.
11. Notice differences between you and your body.

The above should be done to a major cognition or ability regained. You can repeat the above steps until this occurs. Write it down.

STEP THREE

12. Create in your body a feeling of calmness; create in your body sexual desire and turn it off. Continue that step until you feel you have control over the sexual drives.

Create in your body a feeling of pain.

Create in the body a feeling of serenity.

Do the above until flat.

Create in the body a feeling of hunger and turn it off. Continue this step until you are in control of hunger drives.

Create in your body a flow of admiration particles and turn them off. Repeat until you can do this easily.

The end result of these particular drills is the regained ability to control the body and its sensations. You may have to cycle through the steps more than once.

The Operating Thetan must be able to manufacture and experience to his complete satisfaction, all sensations including pain in mock-up form, and all energies such as admiration and force.

STEP FOUR

14. Postulate anger, boredom, grief, cheerfulness and serenity — in that order. This is continued until you are sure that you can create any emotion.
15. Finally, exteriorized visit a friend who lives in another state. Greet him and flow affinity to him. Ask him to communicate to you by letter.

ATTEST TO OT VI

Series 4 WORD
CLEARING AND

INFORMATION FOR
PRE OTs ON NED
FOR OTs

6A. DEMO: Demo each definition in NOTs
4 attachment #1 with your twin.

6B. PRACTICAL: In a word clearing
session on the meter:

(a) Get word cleared by another ACS
Student on each of the terms on HCOB
26 Sep 78, I, Attachment #1.

(b) Word clear another ACS Student
on HCOB 26 Sep 78, I, Attachment #1.

This is done by having the student
read the definition given, telling
what it means in his own words,
using it in sentences or giving
examples until he understands it
and F/Ns (as in the Dianetics or
Scn CS-1).

7. TAPE: 6108C17 RUDIMENTS-VALENCES
SH Spec-41

8. TAPE: 6110C18 VALENCES-CIRCUITS
SH Spec-68

9. HCOB 17 Sep 78 I NED for OTs
Series 7 VALENCES

9A. DRILL: Drill fully the commands and
procedure of the Valence Technique on
a doll. The student drills the follow-
ing steps on a doll (who is the "Pre-
OT"). The coach, sitting off to the
side of the student, supplies the doll's
answers using words (NULL SUBJECTS)
from prepared assessment lists in the
back of the Book of E-Meter Drills for
answer to the "What" and "Who" ques-
tion until he gets to "me" as an ans-
wer, he verbally gives the reads and
F/Ns, where applicable for the items
and answers. The coach must also say
where the BT or Cluster is located
and when it is blown. The coach is to
keep the drill very simple as given
below.

(a) The student starts the drill with the following command to the doll: “Locate a BT or Cluster” and acknowledges the doll when the doll says he has located a BT/Cluster.

(b) Student then asks “Where is it located in relation to the body” or “Where is it located?” or “Where is it?”. (This is not a rote worded question, but the location of the BT or Cluster or mass must be found and communicated by the doll acting as the Pre-OT.)

(c) The student then tells the doll: “With your attention on that exact spot (as found in (b)) ask it ‘What are you?’ “. Coach supplies an answer. (Note: “With your attention on that exact spot” is not a rote command and wouldn’t necessarily be used all the time. You want the Pre-OT to focus his attention on one BT or Cluster at a time.

(d) The student acknowledges the doll and tells the doll to acknowledge the BT/Cluster’s answer.

(e) After the doll has acknowledged the BT/Cluster’s answer, the student tells the doll to ask it “Who are you?”.

(f) The doll (coach supplies answer) relays the answer “me” to the student.

(g) The student tells the doll to acknowledge the BT/Cluster’s answer. Coach would then signify it’s blown and an F/N.

The student does this drill with admin., writing down the questions, answers, the location of the BT/Cluster, reads, F/Ns and blows. This drill is done until the student is totally confident and can do it rapidly and easily with clear admin.

The following drills are all done with a doll being the Pre-OT, the

coach supplying the answers, and admin kept, as in Drill 9A.

9B. DRILL: Using the Valence Technique, as in Drill 9A, drill handling:

(a) A BT or Cluster who gives some answers other than “me” to the “Who are you?” question.

(b) A BT or Cluster who gives a repeating answer to the “Who are you?” question.

9C. DRILL: Using the Valence Technique, drill handling a mass that doesn’t give any answer:

(a) By running Hello’s and OK’s (Ref. PAB 123, Vol III, page 136-7), followed through with Valence Technique.

(b) By jolting it a bit earlier followed through with Valence Technique if it hasn’t blown.

9D. DRILL: Using Valence Technique, drill handling:

(a) A ridge.

(b) A dead energy mass, being put there by some BT or Cluster.

(c) A “Shell BT” (NOTs Series 1 and the Definitions).

9E. DRILL: Using the Valence Technique, drill all of the above at random until the student auditor feels confident in knowing how and when to do these handlings.

10. HCOB 14 Feb 80 NED for OTs Series
54 CLARIFICATION ON
ACKNOWLEDGING IN THE
VALENCE TECHNIQUE

10A. DRILL: Using the Valence Technique, with a doll and coach providing answers (NULL SUBJECTS AS IN 9A) and reads, drill handling:

(a) When the answer to the “What are you?” question gives an LFBD F/N.

(b) When you’ve got a “me” answer

to the “Who are you?” question with an LFBD F/N (and Pre-OT has not said it’s blown or gone or some such.)

(c) When you got an F/N after the acknowledgement of the “me” answer on “Who are you?” but Pre-OT has not signified any blow or that it’s gone.

(d) When you got an LFBD F.N after acknowledgement of the “me” answer.

(e) A series of blows.

10B. DRILL” Drill all the above at random until the student is proficient with handling correctly.

11. HCOB 31 Jan 80 NED for OTs Series 51 AUDIT BTs CONCEPTUALLY

11A. DEMO: Demo the difference between auditing verbally and conceptually.

11B. DEMO: Demo how you would handle a Pre-OT who says he got a picture and indicates to you that must be the answer to the “What are you?” question.

12. HCOB 16 Sep 78 III NED for OTs Series 31 THE “THETAN HAND” TECHNIQUE

12A. DEMO: Demo using Thetan Hand Technique:

(a) To sever a string or beam or line, etc. which is connecting a mass to the body.

(b) To separate ridges, masses, composite masses, or layers of clusters.

(c) In the “Yo-heave” technique.

13. HCOB 17 sep 78 V NED for OTs Series 6 BLOWING BTs AND CLUSTERS

13A. DEMO: Demo why an awakened BT mocks up mass.

13B. DEMO: Demo a BT stuck down the time track. _____

13C. DRILL: Drill handling a BT holding other BTs there and also how you would find out if this was so. _____

13D. DRILL: Drill handling a "ghost". _____

14. HCOB 15 Sep 78 IV NED for OTs
Rev. 13.2.81 Series 9R
CLUSTER, CUMU-
LATIVE, HAND-
LING AND DATE/
LOCATING _____

14A. DEMO:
(a) Demo how a right date for one can act as a wrong date for another. _____
(b) Demo how a right location for one can act as a wrong location for another. _____

14B. DRILL:
(a) Drill checking for and handling remaining BTs with Valence Technique after the Cluster (or Cum. Cluster) has broken up. _____
(b) Drill checking if the date has acted as a wrong date for others and indicating it as such, after the Cluster's blown. _____
(c) Drill checking if the location has acted as a wrong location for others and indicating it as such, after the Cluster's blown. _____

15. _____

16. _____

17. _____

B. NED FOR OTs RUNDOWN - RUDS, REPAIR OF PAST AUDITING AND SESSION FACTORS

1. HCOB 22 Dec 79 FLYING RUDMENTS
AT OT III AND
ABOVE _____

- 1A. DRILL: Drill the 6 Rudiment Questions (not the handling) on a doll until known perfectly. _____
- 1B. DEMO: Demo identifying whose charge it is on a rudiment question. _____
- 1C. DEMO: Demo when you wouldn't need to identify whose charge it is on Rudiments. _____
- 1D. DEMO: Demo why you handle an out-rud on a BT or Cluster to F/N using earlier similar, if necessary. _____
- 1E. DEMO: What you do with the Bt or cluster if it is still around after you've F/Ned the rudiment. _____
- 1F. DRILL: Full handling of rudiments per HCOB 22 Dec 79 FLYING RUDIMENTS AT OT III AND ABOVE on a doll with a coach supplying data using null subjects and saying what the reads are. _____
2. HCOB 4 Jul 79 HANDLING CORRECTION LISTS ON OTs _____
- 2A. DRILL: Handling a WCCL on a doll with coach supplying data as per above drills and demos. _____
3. HCOB 17 Sep 78 III NED for OTs
Series 14 OUT INT,
WENT IN, WENT ON _____
- 3A. DEMO: Demo handling a BT or Cluster with Out-Int. _____
- 3B. DRILL: Drill handling a BT or Cluster with Out-Int. _____
4. HCOB 30 Sep 78 II NED for OTs

tional Action) _____
9. HCOB 29 Oct 78 I NED for OTs
Series 39 MORE
ON DIANETIC
CHAIN ERRORS _____
- 9A. DRILL: On a doll, with the coach
using fruits & null subjects for
chains, items, dates, etc., drill
handling the following Pgm Steps
of NOTs Series 26R in conjunction
with the referred-to portions of
NOTs 27, and NOTs 43 and NOTs 39.
(a) Pgm Step 3. D/L point when
Pre-OT went Clear (NOTs 11, 12, 27
#4A, 43) _____
(b) Pgm Step 4. Handle misownership
of pictures by Pre-OT (NOTs 11, 12,
27 #4A, 43) _____
(c) Pgm Step 5. Handle BTs who went
Clear (NOTs 11, 12, 27 #4A, 43) _____
(d) Pgm Step 6. Handle BTs who went
Exterior (NOTs 11, 27, 43) _____
(e) Pgm Step 7. Handle BTs audited
past erasure (NOTs 11, 12, 27, 43) _____
(f) Pgm Step 8. Handle BTs who were
overrun, & Copies (NOTs 11, 12, 27
#4E, 43) _____

(g) Pgm Step 9. Repair BTs run on uncharged items (NOTs 11,12,39,43)

(h) Pgm Step 10.L3RG on messed up Dn Chains (NOTs 39)

(i) Pgm Step 11. Repair any goofed D/L on a cluster (NOTs 9,12,27 #4G)

(j) Pgm Step 12. Repair of Past Auditing by Name of Auditor (Optional, only if interested).(NOTs 11, 12, 13, 27 #4F, 43)

9B. DRILL: Handling a stuck picture (NOTs 12).

10. HCOB 20 Sep 78 IV NED for OTs Series 18 SESSION FACTORS

10A. DEMO: Demo over-restimulation.

10B. DEMO: Demo the EP for a session.

11. HCOB 15 Nov 78 NED for OTs Series 40 AUDITOR ROLE

11A. DEMO: Demo what will happen if you let the Pre-OT on NOTs try to answer an unreading question or look for a BT or Cluster that isn't reading.

12.

13.

NOTE: AT THIS POINT ON THE CHECKSHEET THE ACS STUDENT IS TO START AUDITING NED FOR OTs ON ANOTHER STUDENT, AND COMMENCE BEING AUDITED ON NED FOR OTs HIMSELF, ONE SESSION PER DAY. THIS AUDITING CONTINUES THROUGHOUT THE COURSE.

C. NED FOR OTs RUNDOWN - DATA AND TECHNIQUES:

1. HCOB 30 Sep 78 III NED for OTs Series 13 FESING OF FOLDERS AND FULL FLOW TABLES

- 1A. PRACTICAL:
 (a) Make up a (or fill in an exist-
 ing) Full Flow Table on an ACS stu-
 dent's folder per the above HCOB. _____
 (b) Make up a full list of all the
 auditors from an ACS Student's Full
 Flow Table. _____
2. HCOB 11 Dec 78 NED for OTs
 Series 41 HAND-
 LING BTs MESSED
 UP ON OT III _____
- 2A. DEMO: Demo why a BT or cluster
 messed up in running OT III needs
 correction with finding the OT
 III error and running the correct
 OT III action. _____
3. HCOB 11 Dec 78 NED for OTs
 Series 42 NED for
 OTs:REPAIR LIST
 FOR ERRORS IN
 RUNNING OT III _____
- 3A. DEMO: Demo the instructions A-F.
NOTE: Do not drill this list(due to
 the possibility of restimulation). _____
4. HCOB 21 Sep 78 NED for OTs
 Series 15 THE
 "SOLIDITY" OF THE
 BODY _____
- 4A. DEMO: Demo mass mistaken for the
 mass of the body. _____
- 4B. DEMO: Demo how the body magnifies
 perceptions. _____
5. HCOB 17 Sep 78 II NED for OTs
 Series 16 "EXTER-
 IOR VISIO", BT
 PERCEPTION _____
- 5A. DEMO: Demo how the Pre-OT might
 confuse a BT's exterior visio with
 his own. _____
6. HCOB 10 Feb 79 NED for OTs
 Series 45 PARTIAL-
 LY BLOWN BTs _____

- 6A. DRILL: Drill handling a partially blown BT. _____

- 6B. DRILL: Drill handling when you're getting exterior visio from a BT. _____

- 7. HCOB 9 Feb 79 II NED for OTs
Series 44
WRONG ITEMS _____

- 8. HCOB 29 Feb 78 NED for OTs
Series 25
RESISTANCE TO
CHANGE _____

- 8A. DEMO: Demo how the handling of resistance to change works. _____

- 9. HCOB 29 Oct 78 III NED for OTs
Series 35 NOTES
ON PTS _____

- 9A. DRILL: On a doll with a coach using null subjects, drill handling PTS BTs and clusters. _____

- 10. HCOB 27 Sep 78 I NED for OTs
Series 24
NED for OTs
REPAIR LIST _____

- 10A. PRACTICAL:
Work out how you would handle each line of the NOTs Repair List. Do not take this up with another student. Refer to your course materials only. Do not drill this list (due to possibility of restimulation). _____

- 11. HCOB 20 Dec 79 NED for OTs
Series 48
AUDITING SOME-
BODY UNDER CON-
STANT AND CON-
TINUOUS PT
STRESS _____

- 11A. DEMO: Demo why you don't run major actions or anything heavy on a Pre-OT who is under continuous PT stress or is ill. _____

- 11B. DEMO: Demo when you'd end session on such a pc and why. _____
- 11C. DEMO: (a) Demo Routine A. _____
 (b) Demo Routine B. _____
 (c) Demo Routine C. _____
12. HCOB 26 Sep 78 IV NED for OTs
 Series 22
 ANATEN _____
- 12A. DEMO: Demo what's occurring in a NOTs session when you run into anaten and how you would handle. _____
- 12B. DEMO: Demo what produces a somatic _____
13. PRACTICAL:
 (a) Demo handling End of Endless Int on a Pre-OT on NOTs. (Ref: HCOB 24 Sep 78RA, Rev. 21 Feb 79 Int RD Series 4RA and HCOB 25 Sep 78, I, Int RD Series 5.) _____
 (b) DRILL: Handling End of Endless Int on a Pre-OT on NOTs. _____
14. HCOB 15 Sep 78 III NED for OTs

Series 34
THE SEQUENCE
FOR HANDLING
A PHYSICAL
CONDITION _____
37. HCOB 11 Jan 80 QUAL CORREC-
TIVE ACTIONS
ON OTs _____
- 37A. DEMO: Demo the definition of
“subjective”. _____
- 37B. DEMO: Demo the definition of
“objective”. _____
- 37C. DEMO: Demo why subjective ques-
tions are not to be asked of Pre-OTs
in non-auditing situations such as
in cramming. _____
38. HCOB 26 May 80 NED for OTs
Series 53
ERRORS ON
NOTs _____
- 38A. PRACTICAL:
Give 3 examples of incorrect audit-
ing questions that would be hard or
impossible to answer and show why
that is so. _____

SECTION SEVEN

STUDENT THEORY COMPLETION

A. STUDENT ATTEST:

The following attest is to be signed off, item by item, before the student graduates from the Advanced Courses Specialist Course.

If the student has any question or reservation about attesting to any of the points below, he should reread himself on the area.

Only when the student has acquired these skills without question will he or she be able to achieve the excellent results demanded by the NED for OTs Rundown.

I attest that:

- a) I have applied the Study Tech of the Student Hat “fully” while on this Course. _____
- b) I am fully familiar with the meter, have done all of the meter drills on this Course, am certain of my ability to operate and read the meter flawlessly, and know how to handle the TA, sensitivity and needle. _____
- c) I am able to repair a wrong date and a wrong location. _____
- d) I have, without reservation, a full understanding of the OT III materials. _____
- e) I am able to accurately assess the LDN and can successfully carry out each of the LDN handlings on a pc. _____
- f) I understand and can use the Valence Technique. _____
- g) I understand and can use the technique of jolting BT/cluster a bit earlier in time (to handle stuck points) _____
- h) I understand and can run the Hellos and OKs process to get a Null into communication. _____
- j) I understand and am able to handle out-Int competently. _____

- k) I understand and am able to handle R/Ses competently. _____
- l) I understand and know how to do an Assist. _____
- m) I understand over-restimulation and know what causes it. _____
- n) I am able to handle the NED for OTs Repair List competently. _____
- o) I am able to competently handle an L3RG on NED for OTs. _____
- p) I understand and know how to follow the Sequence for Handling Physical Condition. _____
- q) I understand the term “Q and A” and the importance of not Q and A-ing on this level. _____
- r) I know the importance of completing cycles and flattening actions started on this level. _____
- s) I understand and know how to handle “On-ness”. _____
- t) I understand the principle of misconception on NED for OTs. _____
- u) I attest that I am a NED for OTs Auditor. _____

SECTION EIGHT

STUDENT AUDITING COMPLETION

A. STUDENT AUDITING SECTION: PRACTICAL:

- 1. I have successfully audited NED for OTs on another student with excellent results. _____
- 2. I have been audited on NED for OTs by another student with excellent results. _____

STUDENT COURSE COMPLETION

A. STUDENT COMPLETION:

I have completed the requirements of this checksheet and I know and can apply the materials.

STUDENT ATTEST: _____ DATE: _____

I have trained this student to the best of my ability and he/she has completed the requirements of this checksheet and knows and can apply the checksheet data.

SUPERVISOR ATTEST: _____ DATE: _____

This student is auditing NED for OTs well and has produced excellent results.

C/S ATTEST: _____ DATE: _____

B. STUDENT ATTEST AT C & A:

I attest (a) I have enrolled on the course, (b) I have been properly invoiced for the course as a contracted staff member, (c) I have studied and understand all the materials on this checksheet, (d) I have done all the drills on this checksheet, and (e) I can produce the result required in the materials of this course.

STUDENT ATTEST: _____ DATE: _____

C & A : _____ DATE: _____

(Route this form to Course Admin for Filing in Student's folder.)

NED for OTs Series 1

C O N F I D E N T I A L

NED FOR OTs RD

THEORY OF

As has been announced, there is a special handling for OTs who have been run on Dianetics since Clear. It is called "NED for OTs". This RD is a prerequisite for OT VIII. Its EP is CAUSE OVER LIFE. The RD steps are covered in separate issues. This issue covers the theory behind the action and also includes OT III data which has never before been released.

The reason Dianetic auditing messes up Clears and OTs is that when an auditor asks for an earlier similar which doesn't exist, you'll probably go over into a cluster or BT where it does exist. You see the Clear or OT doesn't have pictures of his own so the Dianetic chain is being run on a BT or cluster and it really caves in somebody when asked for an earlier similar that doesn't exist, on that BT or anywhere else. And it'll jump the guy straight into another BT or cluster. And you get chaos.

BTs are easily monitored by the think of the pc, and they can actually respond to anything he thinks. They're totally at effect. Their banks are controlled by exactly what the person thinks at them. Just like an auditor can control the time track of a pc. Same phenomena.

A person can see the pictures of a BT or cluster because there is an intimate tactile connection between the person and the BT. A person can "think" at a BT or cluster, a picture will turn on in the BT or cluster representing that think and the person will see it as a picture and erroneously suppose it is his own if he doesn't know this phenomenon.

SOMATICS

A BT or cluster has three choices - it can run its own life or run yours or run nothing. The things you run into with somatics are not likely to be of the category of your life, they're more likely to be in the category of the BT's life. So it gets to be a dizzy scene.

There's a way you can detect that a person is not really running his own incident. Let's say the listed somatic is "a pain in the ear". Well, great. When he runs the thing he even get a little twitch in the ear. But he will get something "having" a pain in the ear. It would be uncommon for him to actually get a pain in the ear. In other words he doesn't get the somatic where it is supposed to be on the body. That's because the BT isn't in that position. He's liable to get a pain in the kidney, do you see? Or a pain in the eye. This isn't inevitable. Once in a while the guy gets a pain in the forehead. Let's say this somatic was "a pain in the forehead". He actually runs an incident and there's a slight somatic in the forehead but it's kind of weird because it doesn't actually run out on his own forehead. It might disappear but it didn't disappear on his own forehead.

MENTAL TRANSMISSION

When you talk about telepathy, there is a proximity factor. When a thetan is pressed straight up against another thetan very tight, total tactile communication, you get this type of mental transmission. You can achieve it by reaching, when there is no tactile. You have to reach your attention a considerable distance. You can do it. An example of this is where two guys who are in relatively good shape start putting postulates at the same point on a wall that's maybe twenty feet away in front of them when they're sitting side by side. And they start putting postulates at a certain preconceived spot on the wall. Both of them will perceive a bzbzbzbzzzz of sort of little energy explosions. Not small - maybe 3 or 4 feet wide and a couple of feet high. It's when they both did it simultaneously. Two postulates will collide in the same exact place in the mest universe and go bzzzzzt. It will happen; that's at a distance. But apparently there's such a thing as a tactile. After all you realize the amount of mass that is connected with a BT - he's massed up. You put an impulse into that mass and the mass is up against the body - you put an impulse into the body it goes into that mass. The BT can respond. Unwittingly, unknowingly, totally at effect. Makes him hard to handle, by the way. That's how you can make them run an Incident I and an Incident II. They just run it willy nilly. They can't help themselves. And it as-ises in the bank and that normal phenomena takes place and they go bzzzzzt, unless you yourself have put up a ridge with anger or emotion or something of the sort. I know some guys try to do it vocally or something stupid. What's interesting is the number of BTs that have strings into the body. You think they blow and they still have a connection - beams.

VALENCES AND "SHELL BT"

The sizes of incidents are very often wrong, and an out of valence phenomena occurs. The bulk of BTs and clusters are out of valence and often the pictures seen are very small. Now on the other hand a Pre-OT (who thinks he is running his own incident but is actually running a BT or cluster) can seem to be totally in valence at one point of a chain. Just one point. The rest of it, no. And what the Pre-OT should suspect at that time is that he has a BT that surrounds his whole body. This would be a "Shell BT". A Clear can go into the valence of and see the pictures of this BT or cluster. All these things confuse a person trying to run this because he'll take this one point of valence and it sort of "proves" it to him that it must be his incident.

The Shell BT is a composite body entity which is a mock-up that thinks (mistakenly) that it is holding the body together. You can collide with that. I suppose that's really probably what they think is the astral body, a collection of BTs and clusters molded into a semblance of a body structure. As this "astral body" is highly electronic. BTs and clusters can easily get stuck in it even though they themselves are creating it.

DATA ON MIS-RUN DIANETICS

There's another interesting phenomena which occurs on any pc that is mis-run on Dianetics. If an auditor asks for an earlier similar which doesn't exist, the pc will look over into a cluster or BT where it does exist. So therefore you mustn't ever pressure a pc for earlier incidents which don't exist in the same being or beings. A guy can find it easily or it isn't there because it's a different kind of jumped chain. The pc isn't jumping from one of his chains to another one of his, he's jumping from one of his chains to a BT or cluster's chain. (A Clear or above would be jumping from one BT chain to another.) Let's say the guy is running his own chain. And then all of a sudden the auditor goofs and insists there must be an earlier incident. He's got an erasure going and instead of paying any attention to this erasure he demands an earlier incident. He'll jump the pc over into a BT that's probably been stone dead for god knows how long. The auditor jams up the case. And the way he prevents this from happening is to never run past the postulate, just as it says in R3RA.

DUB-IN

As the Pre-OT increases in power and has more thetan power, the BTs and clusters will mock up what the Pre-OT thinks and become totally the subject of the Pre-OT's control. The Pre-OT doesn't realize that he's getting suckered into believing that they are his pictures. It seems to prove itself: The Pre-OT thinks "can of beans" and he is instantly presented with a picture of a can of beans. That is the actual liability mechanism. But you're not running them out of you, you see. So it can look like the fellow is running out his own incident. That's why a Clear or Dianetic Clear can get suckered into believing that his pictures have come back. That's the exact mechanism. He's gone up in horsepower. Any BT or cluster he has anywhere around him will respond exactly and totally subordinated. They go into almost instant control. He thinks a thought in their direction and they can actually mock up a picture which isn't their picture or anything else. You get dub-in. They didn't know anything about it but they mocked up the picture. And that's the explanation of dub-in!

MEMORY

The dub-in phenomena also affects a Clear or above's memory. You say "Well, I was Aloysius George Smith in 1862". And you get a picture of Aloysius George Smith in 1862 gratuitously furnished you by a BT - and it will be "his" version of 1862. Now, it will be correct that you were Aloysius George Smith in 1862 but the truth of the matter is that you (as a Pre-OT) don't have any pictures of it. It's interesting because you won't find you have a consecutive life in pictures. It'll be kind of like a very poor slide show substituted for a movie. You can say you were in Flanders in 1803 or you were at Oxford, and you will notice if you watch closely you may still have some very active BTs that you will get a gradually dawning picture of Oxford from. But they may think that Oxford is the same thing as Arcturus so god knows the accuracy of the pictures that you get. When a person is Clear he does have an accurate memory but because this other phenomenon occurs and somebody furnishes him with a picture of Oxford, then he says "I'd better look at the pictures of Oxford" and instead of remembering it straight he gets all fouled up.

DORMANT BTs AND CLUSTERS

In NED for OTs you are actually handling, in the main, dormant BTs and clusters.

These are not really alive enough to run Incident IIs and Incident Is on. They have different considerations, these dormant BTs and clusters, but they add up to being dead or below being dead. They're in the state that FBI agents and government officials eventually wind up in when they aren't already simply an animated dormant cluster. If people who are busy trying to smash up Scientology realized what they themselves were heading for, they would have a couple of other thinks, as the state of these dormant BTs and clusters is pretty grim. They are not really dead, they just hope they are. And it's a pretty poor view looking forward to the next trillion years in that state. These aren't normally touched in basic OT III auditing but one can become aware of them because they can produce somatics and out body conditions.

Now when you audit Dianetics on Pre-OTs, you possibly wake up very dormant BTs and clusters that actually have never been hit on OT III - never dreamed they existed. These will be uncovered especially when a Pre-OT is run on "never happened", "wasn't there" type chains. These are denier type chains and running them will open up some BT channels that had been completely dormant. There's mention of this back in the early 50's. "You will sometimes get into parts of the bank which had better be left closed." This is actually the phenomena that was discovered at that particular time. I just knew it existed. It was a dormant something, in a totally dormant condition. They can't be awakened with a hand grenade normally. They also won't assess. So you get into these when the auditor has taken up a non-reading item. They are usually not live on a meter. They practically run on, being dormant, to the end of the universe unless somebody disturbs them. They don't usually activate when you just put your attention on them, they're really dead. You have to actually put some life into them to activate them. They're like pebbles on a beach. Anyway, the EP of OT III gives only an appearance that all BTs and clusters are gone. There's an axiom that says absolutes are unobtainable. If you don't ever want to run into any more BTs or clusters, well you'd better go find some universe where they don't exist. But actually, there are fewer of them hitting people and bouncing around than one would think. They light less often than one would suppose. But listen, you're living in a universe which is crawling with this type of stuff. And planet Earth was a dumping ground to end all dumping grounds. Actually, the end of OT III is when those BTs and clusters that are easily put into communication are gone. It's not when all BTs in the whole universe that ever will be, are gone.

NED for OTs handles those BTs and clusters which, while they could still affect the body, are not readily responsive to OT III handling. As NED for OTs is run these cats wake up and get handled. This relieves the Pre-OT of a lot of phenomena which puzzles him and can hold him down. As you go along in running it you will find that the material to which NED for OTs is addressed seldom considers itself live beings. It thinks it is MEST, body parts, significances, conditions - anything but a live being. Because a thetan can't do anything but survive, the states he can get into exceed what we normally think of as living beings. Even though you will occasionally find "live" BTs and clusters in running NED for OTs the bulk of the material you are handling considers itself outside that category. While it responds to all the laws of life it requires a special address to get it into the realm of awareness that it is alive.

You've never had any pcs like that unless you've worked in an institution and have seen some inmate living in a totally lifeless state, unaware of anything. NED for OTs handles this condition on BTs and clusters which existed without being suspected except for the occasional clue of a strange picture or a wild somatic.

WHY YOU CAN'T RUN ENGRAMS AFTER CLEAR

A Dianetic or Scientology Clear has erased his own bank and has no pictures. Any attempt to run a Dn or Scn Clear on Dianetics, NED, XDN or any R3R, causes restimulation of BTs and clusters, and it is their pictures he sees and tries to run as his own, which is a "misownership" of the incident/picture. As he thinks it's his picture he "misidentifies" himself with the BT or cluster whose picture it is. Now if this is compounded by a wrong or misassessed item (uncharged), these BTs and clusters have a wrong item resulting in further restimulation. If a BT incident is overrun, or the auditor asks for an earlier incident than basic, the pc jumps to another BT or cluster, pulling more and more BTs and clusters into restimulation. Their pictures are copied and cross-copied by other BTs and clusters, making a mess.

A Clear can go into the valence of, and see pictures of BTs and clusters; makes the mistake of thinking they're his incidents and pictures, and down he goes. This doesn't necessarily affect the person himself, but it does affect the body - severely. Most of these BTs are dormant, dead, way below unconsciousness. There are lower states of non-existence that these BTs are in. Their mass and density are great, and they are packed in on the body. When activated these impinge on the body as they are physically attached to it, and via the body are connected to the being, resulting in illness, possibly worse - the pc can be severely incapacitated. If he's a Dn or Scn Clear and not up to OT III, he's at risk. All you can do is get him up to OT III so it can be handled. Clears should be told they're at risk until OT III, and shouldn't stay in the Non-Interference Zone. After OT III they can be handled on NED for OTs. And you don't run Power, R6EW or the Clearing Course on a Dianetic Clear. They go straight onto OT I, then OT II, then OT III. (They'll need to learn to solo audit on the Solo Auditor Course first of course.)

So we have the firm rule:

NO ENGRAM RUNNING, NO POWER PROCESSING, NO R6EW, NO
C.C., NO DIANETICS OF ANY KIND, ON A DIANETIC OR
SCIENTOLOGY CLEAR.

C O N F I D E N T I A L

ASSISTS

You never run a secondary, engram, Dianetic Assist or narrative on Clears or OTs. (And this applies to Dianetic Clears.) If an OT III gets an engram (injury) you can run a Contact Assist, Touch Assist, Date/Locate the injury and run Incident IIs and Is, but not a Dianetic Assist. On secondaries you can Date/Locate - get the earliest beginning and it will blow. But no secondary running. That's what you can do for assists. If a guy has a bad secondary, or a bad injury, you handle that with Date/Locate. You'll find who recorded it, but don't run it as an engram or by R3R or R3RA. And remember that a recent secondary or engram is a restimulation of clusters with earlier mutual incidents, and must be handled as such. Then you handle any individual BTs and copies.

WORD CLEARING AND INFORMATION

FOR PRE-OTs ON NED FOR OTs;

After the first step of the RD, the Advanced Courses Specialist clears the words and terms and has the Pre-OT read and demo the following:

1. Attachment #1 DEFINITIONS
2. HCOB 15 Sep 78, I, NED FOR OTs, THEORY OF
3. HCOB 15 Sep 78, II, WHY YOU CAN'T RUN ENGRAMS AFTER CLEAR
4. HCOB 22 Sep 78, II, MISCONCEPTIONS
5. HCOB 17 Sep 78, IV, BLOWING BTs AND CLUSTERS
6. HCOB 17 Sep 78, I, VALENCES
7. Attachment # 2 INFORMATION FOR PRE-OTs ON NED FOR OTs

This action is done in session, with English Dictionary, Tech Dictionary and the issues listed above to hand. It counts as part of the auditing time.

As these issues are highly confidential and the auditor is responsible for their security the auditor keeps them after the session (not the Pre-OT).

DEFINITIONS

- ATTENTION: TECH DICTIONARY
- ATTENTION UNIT: TECH DICTIONARY
- THETAN (0n): TECH DICTIONARY
- BODY THETAN (BT): By BT is meant a thetan who is stuck to another thetan or body but is not in control (HCOB 5.2.70, Iss. II.) BTs stick to pictures, other BTs and clusters. A BT can go into a valence of anything - BTs can be being anything at all.
- CLUSTER; A cluster is a group of body thetans (BTs) crushed or held together by some mutual bad experience. (HCOB 5.2.70, Iss. II.) The mutual incident is a heavy engram which happened to all the thetans in the cluster and is the exact point in time and space where they "became one".
- MUTUAL INCIDENT: A severe engram which happened to a number of thetans, the picture (which they have in common), keeps them stuck together in that incident. It has a precise date down to the second and fractions of a second and a precise location in space.
- CUMULATIVE CLUSTER: A cumulative cluster is made up of other earlier clusters (see HCOB 29.10.69R for illustration). It is a cluster to which other BTs and clusters have been added by later mutual incidents, all stuck together.
- COMPOSITE (MASS): (See English Dictionary.) Used on this RD to describe masses or heavy somatics made up of a number of BTs, clusters, pictures, ridges.

LAYERED CLUSTER:	Several clusters (and/or BTs) in layers, as one layer comes off another layer comes to view.
SHELL BT:	A BT or cluster that surrounds the Pre-OT's body like a shell. A Clear can go into the valence of, and see the pictures of, this BT or cluster and mistake these as his own, as he seems to be in valence in the picture.
DORMANT BT:	A BT or cluster in a totally dormant condition, they're really dead, in states of existence below unconsciousness. They are out of PT (stuck on the track) and are stuck in the past location. They are in a perpetual reviv in that time and that location. They can be activated or awoken by the Pre-OT.
COPY:	Thetans in the body (BTs) may obsessively copy the pictures of other thetans. Therefore you can find it seems that the thetan who just left is still there because there is a picture left. Spot the fact that someone else copied it and it usually goes. (Add. sheet, Sect. III OT.)
CROSS-COPYING:	When a number of BTs and clusters are restimulated or awoken, each can start making copies of each other's pictures and copies of the copies - called cross-copying.
CROSS-RESTIMULATION:	One BT or cluster restimulating another BT or cluster, who then restimulates another BT or cluster.
MISCONCEPTION:	(See English Dictionary) and Axiom 38. The basic misconceptions are of identity, time, place, form and event; e.g. a misconception of place would be a thetan thinking something that happened in one place, happened in another place. A misconception of event would be a thetan thinking something

happened to him, which didn't happen to him or happened to someone else (Flow 2 or 3).

- MISOWNERSHIP:** A basic misconception of one thetan making the mistake of thinking another thetan's picture or incident or mock-up is his own.
- MISIDENTIFICATION:** A basic misconception of one thetan thinking he is another thetan. It's a mistake in identity. Thetan "A" thinks it is thetan "B". Or one thetan thinks he is more than one thetan, etc.
- VALENCE:** TECH DICTIONARY
- BEINGNESS:** TECH DICTIONARY
- IDENTITY:** See English Dictionary and Tech Dictionary under "valence" and "beingness". It is that by which a thetan identifies himself.
- OUT OF VALENCE:** TECH DICTIONARY
- BLOW:** See Tech Dictionary. In this RD it is used in the sense of a BT or cluster departing after being unstuck from other BTs and clusters.
- PARTIAL BLOW:** A BT or cluster not fully blown. Sometimes one will leave from inside the body and stick or hang up on the outer surface of the body. Or one will go as far as the wall or to some distance and hang around.
- BLOWING BY INSPECTION:** You don't have to do anything, you just look and it blows.
- PICTURE:** See Tech Dictionary under "Mental Image Picture".
- MOCK UP:** TECH DICTIONARY
- SOMATIC:** TECH DICTIONARY
- RIDGE:** TECH DICTIONARY

TIME TRACK:

TECH DICTIONARY

REVIV (REVIVIFICATION): The bringing back to life of an engram in which a pc is stuck. The engram or some portion there of is being acted out in present time by the preclear. It is called a revivification because the engram is suddenly more real to the preclear than present time has ever been. He relives that moment briefly. He does not merely recall or remember it. (HCOB 11.5.65) During research on NED for OTs I discovered that Dormant BTs are stuck in a reviv, i.e. they are stuck down the track in an incident which is present time to that BT. I also discovered that these BTs are reviv'd in a location, meaning that they are stuck in a past location. They are chronically stuck in a past time and place, which for them is still going on. It is "PT" and is where they are, as far as they are concerned.

INSECT:

ON OT III "insect" means a thetan who is an insect, without a body. These stick to other BTs and clusters. Sometimes you can run into a whole swarm of them.

BIRD:

Similar to above - a thetan who is a bird, without a body, and sticking to other BTs and clusters.

ANIMAL:

Similar to above - a thetan who is an animal, without a body, sticking to other BTs and clusters.

INFORMATION FOR PRE-OTs

ON NED FOR OTs

AUDITING ATTITUDE;

The best way to audit BTs and clusters is highly impersonal. Not impolite. Not rough, savage, no blame, shame, regret, nothing. Just dead calm. No unfriendliness, no friendliness. A zero attitude. The best way to handle it is just zero everything. If you engage in chatter or conversation with them it just stirs them up more. Getting rid of them angrily, they don't get rid of.

And of course you audit them telepathically, not verbal comm.

AN AUDITED, NOT SOLO ACTION

One of the reasons NED for OTs is an audited action, and not Solo, is because two cans give a greater depth of read than a Solo can. On a Solo can you get to a point where all of the more available charge has been removed and the needle doesn't read and just F/Ns. However on two cans you can get reads on BTs and clusters that didn't read on a Solo can. This is because you are now dealing with BTs and clusters in states below unconsciousness and stuck down the track.

ODDITY

A Pre-OT on NED for OTs may feel invalidated by the fact that he still sees pictures even though he is not making pictures. The reason for this is because all BTs are picturemakers. A being can go below making pictures and when it comes alive it starts making pictures again. This is the condition of most BTs.

Hence, the phenomenon of the Pre-OT still seeing pictures even though he isn't making pictures. The Pre-OT could be mystified unless this mechanism is understood.

"EXTERIOR" PERCEPTION

During this RD, or even while running OT III, a Pre-OT will sometimes get what is apparently "exterior perception". As a BT is blowing, and while the Pre-OT has an attention unit on the BT, there can be a feedback of the BT's perception to the Pre-OT. You may get the BT's visio of the room or environment as the BT is leaving. This BT perception folds up quickly and ceases when the BT has blown. It is usually very brief and is quite different from OT perceptions (actual exterior perception). In fact to begin with objects tend to look rather thin and flimsy to an OT when exterior, as the body acts as a sort of collector and magnifier of perceptions and sensations. Some Pre-OTs tend to invalidate their own exterior perception because of this. But OT perception improves further up the line. It is necessary to handle all BTs and clusters first though.

BENIGN AND HELPFUL BTs

Most BTs and clusters aren't vicious or vengeful, they're mostly benign, though misguided. They are not in fact of use or value to you, they only hold one back. Some are convinced that they are necessary to the body or to the functioning of some part of the body, this is not so. Some think they are helpful or being helpful. Many are quite confused. Most are dormant and below unconsciousness, and as these are awoken or activated you may feel anaten from them.

As you progress through the RD your own abilities will increase.

And the fewer BTs and clusters there are attached to your body the better off and more OT you will become.

MISCONCEPTIONS

Misconceptions of identity, time, place, form and event hang a thetan up. The only reason why a cluster hangs together is such misconception.

A thetan can have a misconception of time, by having a wrong date for an incident. Or he can conceive that a past picture is "now". Or he can have two incidents switched in time, and think the earlier incident is later, and think the later incident is earlier. Such a misconception of time hangs it up and prevents a blow. And you can get a blow by straightening out the time misconception.

A misconception of place occurs when a thetan thinks something happened in location A, when it happened in location B. You can get a misconception of both time and place. E.g. a cluster gets a recent heavy restimulation. They think the incident was the restim, they made a picture of the restim and think that's where it occurred originally - think the cluster was formed at the time and place of the restimulation. So they have both the time and place in error. This misconception of both time and place confuses them and hangs the cluster up.

Misconception of identity. Thetan X thinks he was implanted in "Woof" (place) - but actually he's copying the picture of somebody who was implanted in "Woof". He hangs up on the misconception of identity (thinks he's the other thetan), and misconception of event (thinks he was implanted when he wasn't).

The whole reason why a cluster stays one, is misconception of identity, time, place, form and event - which is why Date/Locate works. The cluster is hanging in a time and space disorientation.

That's what louses a BT up, some sort of misconception of time, space, form and event or beingness. That ties them up and they are hard to untangle and blow.

They can switch all over the place with identity: he thinks he's thetan "A", but he's really thetan "B" mocking up "A", and that will cause a stress - that's probably the anatomy of stress.

From earlier research I found it takes two viewpoints to make a somatic. You don't get a somatic on a primary concept - it has to be a secondary concept. That's why objectives work, it gets the guy back to the primary viewpoint/primary concept, and the somatic blows. Something is formed originally, then taking another viewpoint of it, it gets more solid. You do objectives and the guy comes around to the original viewpoint and the somatic as-ises. This is from earlier research and is expressed in terms of different viewpoints, rather than different beings or different BTs.

You can have a BT thinking he's two beings. There's an implant on the track that did this ("All is one." "One is all.") A BT can think he's a cluster or can think he's several BTs. A cluster can think it's an individual. All you have to do is weed the misconception out of it and it goes -BONGO! With misconceptions of identity, time, place, form and event you get ridges because you can't occupy the correct viewpoint to blow it. And when you do straighten out the misconception it blows. Obviously if it wasn't a misconception it would blow.

This is why wrong dates and wrong locates hang up, and why getting correct date, correct location, blows them.

If you get several misconceptions it gets really tangled up. One we handled had more than one cluster, the earlier cluster thought it was the later cluster, and the later cluster thought it was the earlier cluster. The earlier cluster was from C.C. Implant around I Quad in the universe before this one (which is now in the Dark Horse nebula in Orion) so they thought their universe (location) had disappeared, they were lost in time and place. On top of that was some Power Processing and a wrong item from an out-list. It was pretty tangled up. But they untangle on straightening out the misconceptions, and blow.

"Only the truth will set you free", but you have to know what is the truth of identity, time, place, form and event.

NED for OTs Series 6

C O N F I D E N T I A L

BLOWING BTs AND CLUSTERS

Per the OT III materials, you can run Grades 0-IV on a BT, but it has to be addressed to that BT, and it rolls rather fast - may only take 4 - 5 minutes.

You can Date/Locate clusters and run Inc. II, Inc Is.

You can Date/Locate clusters and blow them off, but the auditor who does this has got to be a shark at D/Ling. It's the moment the cluster was formed that you date, not when the cluster hits the individual. And Date/Locate is not always recommended on NED for OTs.

COPIES

You've always got to handle copies. BTs will copy. Obsessive duplication is a BT characteristic. Maybe all that engrams are is excessive copying.

The 3 - 10 days to destimulate rule; it's not the incident that was restimulated that takes 3 - 10 days to destimulate, it takes 3 - 10 days for all the copies and copying to fade out.

"Stress" is also a heavy button. You get a lot of copying of stress. So you handle the original, then copies - somebody copying what was run.

NEW TECHNIQUES

The fastest and best way of blowing BTs and clusters is by inspection.

Acknowledgement is very effective. A lot can be blown with pure acknowledgement.

Another way of blowing them is simply to sort of jolt them a bit earlier in time, and

then they run on forward and blow. You use a sort of impulse to move them a bit earlier in time. It blows them off a stuck point on the track.

BLOWING BY INSPECTION

There's a trick in this - don't look at the picture - look at and find the shape and mass of the BT. If you see the picture, shift your attention to the shape and mass of the BT. You don't have to see their pictures. They use pictures as a sort of misdirection. So you concentrate on masses, not pictures. The technique is, you see a picture, trace it back to the BT, i.e. "Whose picture?" and find the BT this way and it blows.

A Pre-OT may have a somatic in one body part, being put there by a BT in another body part. Say he has a somatic in his leg and you find the BT putting it there is in the head and when you find the BT doing this, it blows. A BT can also be being a somatic - he is "pain in the arm".

BT PATTERN

BTs do a "crush in, pull back" - it's almost an attitude. It's a sort of tense heavy physical pull back. The basis is fear - they've been hit hard by something - causes their timidity - they pull back into solidity. It's a "hide" phenomena and a "pull back in" pattern. This causes pressure, the pressure is caused by them pulling back in on themselves, sort of like a thetan trying to duck. And when a BT is awakened it immediately mocks up mass. Mass is produced by "out-of-valenceness". He's out of valence into the valence of an object or other things.

MECHANISM

There is a mechanism of somebody being a body, who has valences of past bodies superimposed on the body. BTs and clusters go into valences of pictures and things too. These guys have been parked in time and gone into a total reviv, you can look down the track and wake them up.

They do a lot of "on-ness" - stuck on things, as different from in things. They went on and couldn't get off.

The NED time track (i.e. time track of Dianetic auditing on a Clear or above) is composed of BTs parked on the time track - not in PT - you look down the time track and wake them up. They are stuck on the track and they also have pictures of themselves stuck on the track.

It is actually possible for a BT or cluster to be totally out of PT, by which is meant, it is physically parked in past time. A BT or cluster can also be in PT while thinking it is in the past and mock up a picture of the past and consider that that is PT. A BT or cluster can be parked in the past so thoroughly that its only concept of a future is a future from that past which is already long gone by - this is the phenomenon of future pictures; it is also the cause of worry about the future, terror stomachs & fortune telling (visions and dreams).

Another mechanism that frees some is the realization that some other BT is holding them in - and it's the truth, BTs and clusters stick to other BTs and clusters.

BLACK BTs

Sometimes a BT will put other BTs in front of him as a sort of protection. You get a black area covered by a white area in front of it. A BT in the black area is holding some other BTs in place in front of it as a sort of protection or shield. The way to handle this is to blow the black BT who is holding the others in place, then the others come off easily. Otherwise if you try to blow the front ones first, nothing happens. If you encounter BTs not blowing, suspect and check for a BT or cluster holding the others , and handle it first, then the others blow easily.

You can get partial blows where the BT or cluster comes off the Pre-OT's body but stays in the room, plastered on a wall or outside the room. These can push TA up until blown fully. When they hang up it is because they still have a connecting string to the body or because they conceive some barrier they have hit is impenetrable. The handling is to cut the beam or push them through the barrier or simply repeat the process. What has actually happened is that the mass of BTs contain amongst them one or more BTs, to which they are stuck, which have not been handled.

A BT or cluster can go into the valence of a person - a cluster can go into the valence of a single beingness e.g. a person known to the Pre-OT in PT and there could be a "stuck picture" of this person. It actually isn't a picture as such, it is a complete mocked up identity plus a mock up of the identity's surroundings. This is very puzzling to the Pre-OT as it doesn't blow as a picture. He is really looking at the copied beingness and characteristics of the person who isn't there, but which is some BTs and clusters thinking they are the person and being the person. (This is discussed under the heading of "Ghosts" in the 1st American ACC in Camden.) The Pre-OT feels haunted, seeing his ex-girlfriend in front of him or even hearing his mother talking to him with brand new dialogue. (Nearly everybody has a ghost if he looks.) It blows like any other BT or cluster but the Pre-OT will be puzzled when looking around for who's mocking it up when nobody is, except the ghost itself. The way to handle is to move the cluster down the time track to a moment before it knew the person and it blows.

The ideal method of blowing BTs and clusters is by inspection, you get into difficulty blowing BTs and clusters when the session has gone too long, pc getting tired, or over-restimulation.

Usually the further through the RD you get, the faster and easier they blow. However, you can hit what appears to be a bog point particularly if the Pre-OT is tired or you overrun for several sessions; at such a point just keep on giving sessions and soon you'll get a session of massive blows and after that they will blow faster and easier than ever. At such a bog point you may have to resort to the "Thetan Hand" technique until it's handled, after which you can return to blowing by inspection or "What are you?", "Who are you?".

NED for OTs Series 7

C O N F I D E N T I A L

VALENCES

BTs and clusters go out of valence. They can go into the valence of a person or animal, some BTs go into the valence of molecules, minerals as well as cells. Some go into the valence of objects. There's a trick of getting them to shift valence. You find out what it is out of valence into and indicate it - this is done by simply asking them what they are. Having found out what he or they have gone into the valence of, you acknowledge it and ask them who they are and they generally blow off.

Psychologists have an operation going of:

- (a) convincing people they are a brain (because they think),
- (b) convincing people they're an animal (meaning they have no soul).

This sticks BTs and clusters into the head (brain), and into the body, and invalidates that they are a being. So it pins the BTs and clusters in, into the body. (And if you ran on a psychologist, "you're a brain", "you're an animal", it would cave the psychologist in, because he has so many overts of doing this to others.)

On the time track BTs were lied to and told they were being built into a body - they have nothing to do with the body track at all, except to sit in or on the body. They had

“model forms” and BTs were made to assume “model forms”. It’s another valence trick - they’re in the valence of a body, or part of a body, such as “torso”, “brain”, “arm”, etc. These aren’t vicious in attitude, they are benign but misguided. They feel they are necessary to the body. They are sometimes stuck on the external perimeter of the body, 2 - 3 feet out from the body, surrounding it.

They are in the valence of something. They consider these safe valences or safe beingnesses. What does a BT consider safe to be in? It is one of the systems of “being in”, protected and defended - be in the valence of something.

There’s also a scarcity of forms, and a being becomes a form. They can also be a significance, and try to be in a form.

They can be a picture, or an unsafe picture - to remind one that “nothing is safe, because one might forget”. So a BT can be a picture, or part of a picture, or he can be being a ridge, or being a problem, etc. A BT can be in the valence of anything at all.

There are actually five steps to shifting valence - you find out what valence the BT is being and acknowledge it and ask “who he is?” - he will usually cognite “I’m me”, and blow.

BTs think they are pictures, things, beings, body parts, objects, significances, somatics - they can be anything at all. If that is realized, they will tell the Pre-OT what they are and blow. The basic misconception when handled, flips them into own valence, and they blow - sometimes disintegrating explosively - with a succession of “I’m me”, “I’m me”, “I’m me”....sometimes they go out several hundred feet and explode violently.

If the Pre-OT asks “What are you?” they’ll answer up “I’m (valence)”, and then realize they’re not (valence). There’s another action of acknowledgement - maybe nobody has ever acked these beingnesses - because they’re so bizarre, so far out. You must acknowledge what the BT or cluster tells you they are. You’re flipping them out of obsessive beingness or a misconceived area.

The full steps of shifting their valence:

- (1) Pre-OT asks “What are you?”
- (2) BT or cluster answers “I’m (valence)” .
- (3) Pre-OT acknowledges BT or cluster.
- (4) BT or cluster realizes they’re not (valence), and blows, or
- (5) Pre-OT asks “Who are you?” and BT or cluster realizes and normally says “I’m me” and blows and sometimes it’s a highly multiple blow.
- (6) If they repeat what they just said ask “What were you before you became that?”, they say “me” and blow.

(If you don’t acknowledge BT’s answer after “What are you?”, the second question - “Who are you?” - tends to be invalidative.)

If they don’t answer, you’re talking to an energy mass and not a BT or they’re really

dead; there's one trick - tell them to go earlier, and if it's a ridge, go behind the ridge and you'll get them.

If they don't answer what they are - persist, say "Good" and ask "Well, who are you?" and they won't persist in their chatter, they'll go silent and probably answer "I'm me" and blow.

Most of the time you don't have to do anything though, just look-and they blow.

DIFFERENT RESPONSES

Blowing BTs and clusters by this Valence Technique is almost the basic rundown - it is the hottest technique there is. There are only three situations under which it does not work at once. These are:

- (A) When you don't get an answer.
 - (B) They give you a significance or identity in answer to the Who are you? question.
 - (C) The criminal type.
- (A) When you don't get an answer:

If you don't get an answer, you may be talking to simply an energy mass put out by some other BT or cluster, or they are really dead, then tell it to go a little bit earlier, jolt it a little bit earlier with an intention or impulse and then it will run on through and blow.

But if it's a ridge, being put out by some other BT or cluster, just look behind the ridge and address your actions to the BT or cluster behind the ridge and then you'll get an answer.

- (B) They give you a significance or identity answer:

If you ask "Who are you?" and get an answer which is an identity such as: "George Smith", or "Willy the Red"; you simply acknowledge that answer and ask "Who are you?" again. Sometimes you may have to run back down the track through a whole chain of past identities, but if you persist the BT or cluster will eventually realize and say "I'm me" and blow.

- (C) The Criminal type:

These may give a criminal response: "Yah, yah, I'm your nemesis, I'm going to eat you up, that's what I am" - it can get very confused because your next question is "Who are you?" and they're kind of telling you who they are. They haven't answered the auditing question of what they are, they can't conceive of it - they're "a demon" or something, whatever they think they are. However if you persist, "Good" you say, "Who are you?" You don't persist in asking them "What they are?", ignore the chatter, just say "Good" and ask "Who are you?" and they quite commonly don't go on with that performance - they simply go silent and they say "I'm me" and they blow.

NULLS

BTs and clusters who are so dead and unresponsive that you can't get any response from them at all, no response, can be woken up by having the Pre-OT run "Hellos and OKs" on them. This will put them into communication and they can then be handled with the Valence questions.

Generally they're very fluent and quite easy to handle, though. Probably what makes a preclear as a whole hard to audit at lower levels, is that you're auditing all of these misconceptions simultaneously. But on NED for OTs you will find the majority of BTs and clusters easy to handle and blow. Many of them simply blow on inspection, and the basic usual technique for blowing the rest of them is the Valence Technique.

VALENCE TECHNIQUE

1. "What are you?"
2. (answer)
3. Acknowledge
4. Realizes it isn't (_____), and blows, or
5. "Who are you?" - "I'm me", and blows.
6. If they repeat what they just said ask "What were you before you became that?", they say "me" and blow.

Those steps above are the basic and most workable technique. If the Pre-OT realizes that a BT or cluster can be being anything - anything at all - and accepts the BT's or cluster's answer and acknowledges that answer, this technique will work very smoothly and well.

NED for OTs Series 8

C O N F I D E N T I A L

BASIC PRINCIPLES UPON WHICH THE

NED FOR OTs RUNDOWN IS BASED

What you are really handling is a cross-influence of life, and the idea that "A" can assume the characteristics of "B". So now in trying to audit "A", you're auditing "B", but he's not there. It's the general cross-influence - somebody copies a picture, somebody copies a copy. It's all on the basis of the misconception that "All is one" and they can't tell whose picture is whose, or whose somatic is whose. You're basically trying to untangle this mish-mash. And what's amazing is that there are as many life beings as there are - there are lots of them.

In this RD, you're handling for the main part, Dormant BTs, so it's different that OT III. These are beings that wouldn't even run on OT III. On OT III or OT III Expanded you run those beings that can be run on the track. Because they do have some incidents in common, if you run the wrong one, it doesn't matter too much, you'll run the right one anyhow.

NED for OTs untangles the mish-mash and the cross-influences. You see them all the time on people in a behaviour or life basis. The old time faith healers themselves pick up the somatics from the patient. One time I did an emergency assist - I asked a pc - her feet were killing her and there was nothing wrong with her shoes - I asked "Whose feet are they?" - she said "My sister's" and that was the end of the sore feet!

Because of the number of beings it can get quite complex. It all starts out originally with a thetan obsessively copying the physical universe around him. And when he starts doing that, he sets himself up for copying other beings' universes and then he gets pretty confused. And the basis of it all is "misconception". First and foremost is "misconception of identity". That's actually what the RD is structured on (it's not structured on "he's got

BTs, so blow off the BTs”) it’s structured on the disentanglement of confusions. This RD handles the entanglement of the BTs.

This RD runs best short sessioned, because the restim then has a chance to key out between sessions. And you’ve always got the 3 - 10 days key-out on your side.

You could call it the “Misconception RD” or the “I-am-you RD” or the “All-are-one RD”! This RD proves very conclusively that all beings are separate individuals, because the only thing that gets them into trouble, is a loss of their own identity - misownership of identity. They are definitely individual and separate beings. The Greeks got into a lot of trouble believing they were all part of Zeus. There must be other implants on the track too that give them this idea. But it is now proven by this RD that people are individuals, so are BTs.

The only thing that forms a cluster, is a misapprehension, agreement and shared experience. They are under the misapprehension that they are one being. What hangs it together is similarity of identity. This is the $A = A$ that forms a cluster. Because they have got the same picture, they must be the same person!

Those are the basic philosophical concepts back of the RD, and they have never been tackled head on before!

For example, a misconception - “I am Mamie Glutz”. How many crazy people in an institution think they are Napoleon? - some misconception! Sanity is the ability to recognize differences, similarities and identities - so misconception adds up to insanity.

“Misconception” is the key to any trouble a being gets into. This can be any error of matter, energy, space, time, form, identity or idea, believed by the individual to be fact.

By untangling this, NED for OTs produces some astonishing results.

OT III AND DORMANT BTs

OT III ATTEST

The actual fact of the case is those that have been with the guy for quite a while and those that plunged in on a guy and those that are real tough and real tight and so forth, when you get rid of those, that's it. That's the end of III.

But Planet Earth was a dumping ground to end all dumping grounds. Actually the end of OT III is when those BTs and clusters which can be gotten into communication easily and can be made to run Incident IIs and Incident Is are gone. It's not when all BTs in the whole universe that ever will be are gone.

DORMANT BTs

You can wake up very dormant BTs and clusters that actually you've never hit on OT III - never dreamed they existed.

Many are not visible in PT. These dormant ones are not squarely in the time stream, they're down the track a bit. You shift your attention and pull them into PT, or your attention goes a bit out of PT and there they are. They are not precisely in the time stream. This solves the mystery of how an OT III can see none, get run on some NED and it kicks them in.

It is like a whole being reviv. Dormant BTs and clusters are stuck down the track in an incident. Dormant BTs are out of PT in denyer chains (like "not there", "can't be there"), so they "don't exist", yet they do exist. If you look down the track, there they are, and if you ball them up with engram running or bad auditing, you get real trouble, as they recoil against the body.

PRE-OT'S PERCEPTION

Some Pre-OT's perception is not up to perceiving BTs and clusters and masses. Unless you raised their perception you would miss on this Rundown. The preliminary action of "NED for OTs" is designed to raise the Pre-OT's perception to a point where he can perceive BTs and clusters and other beings' pictures, and this step is vital to this RD.

NED for OTs Series 11

C O N F I D E N T I A L

THE FIRST STEP OF NED FOR OTs

The first step of NED for OTs consists of repairing past mis-auditing. You check "Past auditing" first, and if it's not reading, no pc interest, you skip it. But if later in the Rundown you run into a bog, TA goes high, or any kind of grind or mess up, you recheck past auditing, and handle. Repair of engram running is limited to simply indication. You mustn't get into continuing to run the engram or you'll be running engrams on a Clear, as you aren't running them on a Clear and aren't repairing them on a Clear, you are repairing them on a BT.

THE BUG ON NED FOR OTs

If you get a wrong item on somebody they will now have that item - it persists; e.g. you run "sore toe" on somebody who doesn't have one, they'll end up with a sore toe! If you now try to handle sore toe with auditing it will worsen. Because it was a wrong item in the first place. You have to repair the wrong item. A BT could be run on a non-existent somatic, and to be obliging mocked it up. They can get run on imaginary incidents and on things that are not their track so what was run could have been false.

If the pc was run on an unreading item, BTs will be activated, but they don't have that item either. It's a false assumption there was something there to run - that's their misconception foisted off on them by being given the belief that the item existed or read. When called on to run something, they will furnish copies, misowned and manufactured items. You need to check for BTs run on wrong items, unreading items and sort it out.

Some BTs went exterior and were audited past it. Some BTs had already gone Clear - not just oin the Clearing Course - some went Clear on Objectives. So you don't just have Dianetic auditing on somebody after Clear. You also have Dianetic auditing on BTs after they went Clear! Resulting in invalidation of he State of Clear, the mistake of misowning others' pictures, and then misidentification of identity. NED auditing after Clear applies to BTs as well as Pre-OTs. So there are residual BTs with invalidated erasure, invalidated Clearing. And the originally overrun thetan may have blown and left copies of the overrun.

Grinding an incident on Dianetics or NED will result in some BTs run past erasure, so they have to mock it up again to run. Or they never got to basic and erasure because the auditor never asked for E/Beg or E/Sim, and were left hanging incomplete on the chain. And other BTs will copy all this obsessively.

Out L & N lists and wrong items will do the same thing, and also can be repaired.

Auditor command flubs, lack of acknowledgement, couldn't hear the auditor, session distractions - all these will hand up BTs. Even false dates could be copied - they can be twice removed from reality. In trying to date something now you could wind up dating the wrong date, or dating the date that the wrong date was given. And it might not have been that BT's or cluster's incident that was being dated in the first place - the incident may have been misowned - not their incident.

YOU CAN'T RUN NED FOR OTs ON SOMEBODY WHO HAS BEEN RUN ON WRONG OR UNREADING ITEMS WITHOUT REPAIRING THEM.

Also beware of getting into over-correction, because what you are correcting on one BT, can start uncorrecting on another BT.

So you check "past auditing" for read and "interes" "as the first step. If it reads and Pre-OT is interested you handle it. If not, skip it, but be alert and if Pre-OT hits a bog you recheck past auditing. Remember not to run anything, just indicate it.

This doesn't mean that all previous auditing was bad - far from it! But some auditors due to poor training, bad metering, or nasty habits will be found to have messed up cases. So you repair past auditing by auditors - by auditor's name. (And also see that such auditors are handled too.)

That's the bug on NED for OTs - you can collide with BTs and Clusters messed up in past auditing, and this can recoil heavily and physically upset the Pre-OT. So you keep the Repair List andy and if you run into a bog, use the Repair List and next session C/S to take up past auditing, remembering not to continue to run engrams but only indicate.

REPAIRING PAST AUDITING BY AUDITOR'S NAME

Make a list of names of auditors and test these for read. Include self-auditing and solo auditing too. Those that read, you repair the items run by that auditor, or in self-auditing. And make provision for occluded auditing. You may think you've got it all, only to find an occluded session or sessions spring to view later.

This is why you must teach FESers to FES and make up FFTs, that include the auditor's name.

And that's why the Advanced Courses Specialist Auditor must know what he's doing in training to deliver this Rundown. It's not a piece of cake.

Do it flawlessly and produce the spectacular results the Rundown is capable of.

NED for OTs Series 12

C O N F I D E N T I A L

REPAIRING AND BLOWING BTs AND CLUSTERS

FROM PAST AUDITING OR MISAUDITING

STEPS

1. What was being run?
2. What was the error in running?
3. Indicate.
4. Who was it run on?
(Find BT or cluster by position in the body.)
5. Blow BT or cluster.
6. Copies.

HANDLING PAST DIANETICS, NED, OR R3R

Prior to auditing have the folders and a Full Flow Table (FFT) made up which contains all Dianetic, NED, XDN, or any other R3R items that have been run, in date order, including the name of the auditor who ran these. (This includes any somatic or narrative item that was audited Dianetically.) Dianetic lists as well as L & N lists should also be available. (N.B. Some old timers may have been audited on secondaries and engrams prior to folder records having been kept, and there is always the possibility of false reports and unrecorded items having been run.) This repair action is done by name

of auditor, and those auditors who audited the case on engram running after Clear, or who most grossly misaudited the case, will be found to be charged (reading) and it is their auditing which most likely will need to be repaired. Auditors whose names come up as having grossly misaudited the case in the past should be Crammed or Retreaded or Retrained or subject of an Ethics action in order to safeguard any other pc in future.

Make up a list of names of auditors from the Full Flow Table and include “Self-auditing” and “Solo Auditing”. Allow for the possibility of occluded auditing showing up later as charge is taken off during this repair.

Assess the list of auditor names, including self-auditing and Solo auditing, for read and note size of read. Start with the largest reading, and repair the items run by that auditor as follows:

1. Take the Dianetic item that was run, e.g. “Pain in the Zorch”, and test it for read. (If no read, skip it.).

2. Find the error in running. Such as: “Unreading item”, “Wrong item”, “No such item ever existed”, “Run past erasure”, etc. (Usually the Pre-OT will be able to get this. If not the auditor can find out quickly by meter.).

3. Indicate the BPC found. (ONLY indicate, do not start running anything.)

4. “Is the BT or cluster this was run on still around?” (And note whether this reads, it won’t read if the BT or cluster has already blown.)

Have the Pre-OT find the BT or cluster by position on the body - sometimes the BT or cluster will blow on inspection on this step alone; if it doesn’t,

5. Blow the BT or cluster.

6. Copies. The auditor asks “Copy?” and if reading has any copies spotted and blown. Often the BT or cluster who originally ran the item will have blown, leaving BTs or clusters who copied the auditing or copied the overrun, etc. And don’t nag the Pre-OT for copies or you’ll start some other BT copying now.

As with any Repair auditing this can very quickly repaired, and the auditor must be alert for this and not get into overcorrection. You must also be alert for what you are correcting on one BT or cluster uncorrecting on another BT or cluster; e.g. “Overrun” may be correct for one, but not correct for another. You can check for this and if so, indicate that “Overrun” did not apply to the rest.

Step 2 above - Finding the error - may go earlier similar, the same BT or cluster may have been mis-audited in an even earlier session or sessions, and these too may need to be repaired. But only if earlier auditing BPC exists on the BT or cluster you started with or you’ll jump from one BT or cluster to another.

Handle each reading item run by the assessed (reading) auditor in the sequence these items were run. Then take next best reading auditor by name or reassess the list of auditors. Be very alert for this whole repair action EPing well before all auditors or items have been addressed and when that occurs end it off.

STUCK PICTURE REMEDY

1. The stuck picture.
2. What was the error in running?
3. Indicate.
4. Who was it run on, or whose stuck picture is it?
5. Blow BT or cluster.
6. Copies.

AUDITING ITSELF MAKING A CLUSTER

Seriously bad or rough auditing, Code Breaks, overruns, demanding something that isn't there, asking for an earlier similar that didn't exist, continuing to run an incident that has already erased, grinding incidents, running unreading/uncharged items or wrong items, will mess up BTs and clusters that were not in restimulation or who were dormant. When very bad such a session can itself have been a cluster making incident and is the latest mutual incident for those BTs and clusters stirred up in that session. There will have been considerable cross-copying. Do not attempt to R3R or R3RA such a session. Handle it as described above under Repairing Past Auditing. Repeat those steps until all BTs and clusters have been blown off that session.

PAST MIS-METERING, MIS-DATING OR LOCATING

If the Pre-OT has been mis-metered in the past this may need to be repaired.

Meter evaluation by which is meant the auditor keeps telling the pc that this or that didn't read, etc., can be highly evaluative and invalidative, especially when that auditor was mis-reading the meter. The pc was left hung up in things that did read, but weren't taken up, and when things that didn't read are taken up, it will stir up dormant BTs and clusters, and misownership and misidentification occurs. Add to that cross-copying of BT pictures and you get a mess that can recoil very heavily against the Pre-OT's body, dangerously so.

Meter evaluation can be repaired by getting off when the pc or Pre-OT was told something read when it didn't, and vice versa. And handling "Evaluation?" E/Sim to F/N.

Mis-dating and partial locating is similarly corrected by getting off any wrong locations that were given or locations that were wrong for other BTs or clusters.

Note that on Dating and Locating you can get a build up of mass and pressure, even a protest ridge, due to the date for one BT or cluster being the wrong date for some other BT or cluster. The mass and pressure will blow on indication that it was a wrong date or wrong location for them. A technique as powerful as Dating and Locating which will blow clusters and cumulative clusters when done right, can also mess them up badly when done wrong.

MESSED UP INT RUNDOWNS AND INT REPAIRS

Handle any BT or cluster with out-Int before doing any other action. These are handled per HCOB 17 Sept 78 OUT-INT, WENT IN, WENT ON.

If a Pre-OT has too much or recurring Int trouble, do the “End of Endless Int Repair” process (by Recall only). As it is only recall, it will run on and handle BTs or clusters.

LIST ERRORS ON L & N AND WRONG ITEMS

Mis-done L & N lists, especially over-listed lists and wrong items mess up BTs and cluster. The right item for one BT is wrong item for for another. When overlisted, several BTs and clusters can be pulled in. The handling is as described in the Steps for Repairing Past Auditing.

STATE OF CLEAR

If the Pre-OT has charge on having been audited on engrams after he/she went Clear, you can Date/Locate the point when the Pre-OT went Clear. Then clean up misownership by asking the Pre-OT “Have you misowned any BT’s or cluster’s pictures as your own?”

As well as the Pre-OT having been audited on engrams after Clear, you may also encounter BTs who went Clear and were audited on engrams subsequently. Locate and indicate their BPC of having been audited on engrams after Clear, any misownership, any invalidation of the State of Clear, and copies of this by other BTs and Clusters.

FESING OF FOLDERS

AND FULL FLOW TABLES

An FES should contain the name of the auditor and name of the C/S, per existing issues.

It now becomes imperative that the name of the auditor be clearly noted on the FFT (Full Flow Table) as well as the FES. In making up FFTs on any Dianetic or NED auditing clearly note the auditor's name, as well as the date and item run by that auditor. Existing FFTs do not need to be re-done - just print in the name of the auditor, in different coloured ink (to make it very visible) against the items run by that auditor.

On new FFTs add a column on left side of sheet for auditor's name.

PC's name

FULL FLOW TABLE

Auditor (name)	Date	Item	Run	F1	F2	F3	F4
-------------------	------	------	-----	----	----	----	----

Some cases have had unreading items, wrong items, run on them; sometimes the auditor changed the pc's item or even just decided what to run on a pc. These are grave and can have serious consequences on a case.

In order to fully handle such a situation it is imperative that all the data above is available to a C/S or auditor.

C O N F I D E N T I A L

OUT-INT, "WENT IN", "WENT ON"

If a Pre-OT can put his attention on a BT and blow it off, without even working too hard at it, BTs, with their attention must be sort of blindly in-drawn.

"Went in" and "Went on" are two different characteristics of Int. Some think they can't go in - because they think they can't go through solids - so they "Went on", plastered on (to something).

Another way to blow them is to scan them back to when they went in - and they blow out. Like a plus/minus reaction, "Went in" - blow out.

A BT with Out-Int affects its ability to blow - not the Pre-OT's ability to blow them off - the BT's ability to blow. You scan them down a chain of "Went ins" to the first "Went in" and it will blow.

You could handle a very difficult one by recalling "times they went in" - for very difficult ones. A fast way to blow them would be to get them to scan back through "Went ins" - "When did you go in?" - and they blow.

ON-NESS

There's also "Went on", "Went onto something", and a lot are stuck on something. You scan them back through times when they "Went on". They went onto something and couldn't get off.

Sometimes a BT will blow from inside the body and catch on the outside of the body, or within 2 - 3 feet of the body. You can get too many restimulated on the surface of the

body. You have to blow off these surface ones.

Being stuck on the surface of something would have something to do with the button “Can’t go in” for a BT, and that button produces blows. BTs who “can’t go in” to something, “Went on”, and stuck.

“On-ness” is different from Out-Int. They are stuck on, not in.

“On-ness” is handled in the same way as Out-Int but with “Went on” or “Got on”. The “earlier than” phenomenon applies to “ON”, as one has to first get on something before he gets off. Trying to persuade a stuck “Went on” BT or mass to get off, can run into the same phenomenon as Out-Int and he won’t blow. Handle it the same way as “Went in” but with the difference of “Went on”. One could in theory find a thetan who was “stuck on”, handle that and then find that the same being had Out-Int.

OUT-INT

Sometimes BTs have Out-Int because they can’t get out or couldn’t get out. They are in the valence of something that can’t be out, even fatal to be out, e.g. “the inside of body” or an internal organ. They consider these safe beingnesses, and it’s safe to be in. So you ask “What couldn’t get out?” and they blow.

If you ask them to point which way is in, they can’t. Getting them to point which way was in works, and produces blows. Use the past tense, “Which way was in?” and they will blow.

RECURRING INT TROUBLE

If a Pre-OT on NED for OTs has recurring Int trouble or continues to run into Out-Int, and you can’t solve it easily, do the End of Endless Int Repair Rundown (assessing and handling Int buttons by Recall, not R3RA). This Recall technique will run and solve any Int troubles.

C O N F I D E N T I A L

THE "SOLIDITY" OF THE BODY

BTs think they're pinned to the body, when they're pinned into other BTs, they think they're interiorized into the body, when they're pinned into BTs. How could a being get stuck to a body? There's some kind of central core in the body that the being mistakes for the body. The central core sticks to the body and the thetan sticks to it. Some BTs think they are a body. There are clusters that think they're a body and other BTs stick to the cluster and wind up thinking they're a body. They would have to be stuck by a postulate: "I am a body", or "I am a head", or "I am the brain", etc.

Someone on OT III can think he's complete on OT III because he thinks the solidity he perceives as the body is the body. It is a mistaken apperency of solidity of the body. This apparent solidity of the body is composed of BTs and clusters and may be the same size and shape as the body when first contacted. So someone on OT III perceives this and assumes it's the body and thinks he's done on OT III. This "solidity" he perceives as the body is composed of BTs and clusters. The body becomes transparent to an OT to the degree he clears this up. It is a "body" built of thetans - you have to learn you're not looking at the body, but a false body composed of BTs and clusters. A Pre-OT on "NED for OTs" will become aware of this during the RD (it is not drawn to his attention by the auditor). It's not the solidity of the body but the solidity of BTs and clusters formed as a body.

The body acts as a magnifier of perceptions - it collects and magnifies perceptions - some thetans think they can't perceive well exterior, as the actual body and objects and walls look pretty flimsy and transparent to an OT.

The guy gets fooled - he thinks he's looking at this body and he's not. He's looking at a solid mass of BTs and clusters. The actual body looks transparent to an OT. Unless you get the guy's perception up, he won't be able to perceive this and if he can't perceive them, he won't be able to run them. The preliminary step of "NED for OTs" is to get the Pre-OT's perception up enough so it can be run. This false "body" composed of BTs and clusters is blown off piece by piece on the RD.

COMPOSITE MASSES

A composite mass such as the false "body" composed of BTs and clusters needs to be handled or blown off in pieces. You could make the mistake of trying to blow it all at once instead of piecemeal. You may also encounter "layered clusters", which is layers of clusters on top of each other.

Use the "thetan hand" technique to separate ridges and masses, (you can split ridges apart and separate masses and clusters by passing a "thetan hand" between them). Then blow off the BTs and clusters separately. You can look up and down inside a mass, rather than outside it and it starts to go.

There are so many BTs and clusters that the Pre-OT can wonder if he's pulling in any that weren't there before or wonder if all space is full of them-that isn't so, it only seems that way.

NED for OTs Series 16

CONFIDENTIAL

“EXTERIOR” VISION, BT PERCEPTION

You can get a sort of exterior view as they blow - it's not an actual exterior view, but an apparenacy of an exterior view. It's the BT's visio feeding back to you while the BT is blowing. This visio folds up when the BT has blown and your attention is off it. It's not your own exterior view, it's their exterior view as they're blowing and it fades as they blow and your attention comes off them.

It's to do with viewpoints and attention - if you get one of your viewpoints (attention unit) in one (a BT or cluster), it will carry it and you sort of see through their perception - it's how you see their pictures and why you get some of their visio as they blow.

It has also been noted that when you do get a feedback visio from a “BT” as it blows, that it is actually not a single BT, but two or three and the feedback is coming from another or other BTs who have not cognited that he is himself. In other words it is an uncleared BT or cluster who is carrying this visio anchor point away.

Not all exterior perception comes from BTs though. The Pre-OT can also get an exterior view which is his own actual exterior perception. If the Pre-OT gets a stuck or fixed exterior view, it is easily handled by having the Pre-OT look the other way, i.e. look in the opposite direction, and the fixed direction of view, will unfix. It is easy to differentiate between actual exterior perception of Pre-OT and the phenoomena of the Exterior view of a BT during a blow, by checking on the meter. If it is the view of a BT partially blown, it will read as such. Partially blown BTs should be handled to complete blow at which point the relayed BT visio will cease.

There is a positive way to handle this if it hangs up. This is for the Pre-OT to extend his attention out to the point to which the BT or cluster has blown and ask it again what it is, give it an ack, and then ask who it is. The untouched or uncleared BT or cluster that is being carried away goes “poof” and the exterior visio ceases instantly.

There's also perception by tactile contact, when the BT is attached to the body.

C O N F I D E N T I A L

PREDICTION FACTORS ON LENGTH AND PROGRESS

THROUGH THE RUNDOWN

The first phenomenon you will encounter is the Pre-OT getting apparent exterior perception, picking up the BT's exterior visio as the BT blows.

The second prediction factor is that the amount of restim and pressure remaining at session end becomes less from one session end to another session end.

During the Rundown, the Pre-OT may wonder if he's pulling in BTs and clusters to run, whether all space is filled with BTs, etc. This isn't so, but may seem this way. The Pre-OT will get a realization similar to the Straightwire EP that he/she won't get any worse". This isn't the EP of the Rundown but shows progress is being made.

During the Rundown the Pre-OT will become aware that what has been mistakenly assumed to be the body, is not the actual body, but the solidity of BTs and clusters in shape of the body. The Pre-OT may comment that his actual body or walls or objects look flimsy or transparent and this is actual OT or exterior perception, and become aware that he is perceiving BTs and clusters where the body looks or feels solid. He is perceiving the difference between the false "solidity of the body" and the actual body. As this false "body" is audited out the clusters and masses remaining will swell to greater size, with less mass and solidity.

Further through the Rundown, there are fewer BTs and clusters remaining, and the mass expands and gets softer; it's not under so much pressure. There's less mass, and what is left is less dense. And they blow easier and faster, with decreasing TA action.

Toward the end of the Rundown there are less and less BTs and clusters to trap his attention into the body and his attention goes out onto the physical environment. An OT's

attention can get so exteriorized, that it is very difficult to get his attention onto the body; his attention is on the walls, room, building, area or planet. The meter will read on “wall” or “room”, etc., wherever his attention is. You can get a similar phenomenon of the OT getting perception of a wall or environment, via a blowing BT. Or the BTs can get perception of physical environment via the OT’s body. This phenomenon is different, the OT is in direct communication and perception of the physical environment. (Meter read will establish which it is.)

In earlier research I discovered what we call “leaning on a wall”. The OT “leans” against an object in PT and feels it, and it can put a TA high; e.g. the being is leaning against a milk carton and gets a waxy cardboard feeling. Realization of what is going on handles it. But the phenomenon encountered toward the end of NED for OTs is different. The OT’s attention becomes so exteriorized that he goes into direct comm with the environment and finds it hard to put his attention on the body. About this time BTs and clusters do not read well and the sensitivity has to be turned up high to get reads on BTs, and you have a pretty constantly F/Ning needle. The auditor needs to be sharp on TA and needle handling to keep the needle on the dial and detect small reads on a very loose needle. F/Ning TA becomes more frequent.

Don’t try to push a session past a big win or marked case change; several of these will occur during the Rundown. It’s the EP for that session - not for the Rundown.

It is possible for the Pre-OT later in the Rundown to blow a distant BT stuck to somebody else. If the Pre-OT’s attention is drawn to something outside the session environment, check for a BT or cluster in the area where his attention fixes, and have the Pre-OT blow it off. This action is effective and permanent.

There are two changes going on during the Rundown:

- (a) Pre-OT as a thetan is getting “bigger” and stronger;
- (b) There are less BTs and clusters left.

The Pre-OT will get more and more relaxed, less mass, less tension in the body. At first on the Rundown these masses are very tense and hard, they feel like a tensed muscle, later the mass gets less and lighter and the body more relaxed.

Toward the end of the Rundown the amount of mass left is so slight that after a fairly short session it can become unprofitable to audit as there’s so little left, and what can be found blows so fast and easily.

These last few will blow by inspection and when there are none at all in the Pre-OT or his environment, then you’ve reached the end of the Rundown. The EP of the Rundown is when: the Pre-OT has a transparent body and a clear area around it to some distance (barring perception of other people’s difficulties) and when he realizes he is alive and very much himself.

C O N F I D E N T I A L

SESSION FACTORS

The probable session planning should be short and frequent, based on the general datum that early in the session the Pre-OT quite often can blow BTs and clusters by inspection, while later in the session, restimulation of other BTs and clusters, or possibly tiredness of the Pre-OT, makes it difficult to blow them.

There is a session factor of cross-restimulation. If the session goes on too long you can get some too restimulated to blow easily. This can build up pressure and push the TA up. It relieves on indication of cross-restimulation. BTs go into restim on other BTs' pictures.

As the sessions are generally short, Tech Services and Tech Pages will have to be very well organized and effective, so that no auditor time is lost waiting for next pc, or folder. C/Ses and auditors will have to ensure that Executives in and above Tech Services know and follow C/S Series 56 and BFO 46 VALUE OF SERVICES DELIVERED, HOW TO RAISE and cram them on these issues whenever lines or terminals drop out.

The sessions are generally short and frequent. You must not continue a session past the session EP, usually an F/Ning TA, or a win. You must not go on past the session EP or get into grinding due to over-restimulation. Show this to your D of P if he tries to push you.

There's also a factor of "incomplete blows". You can meter check for this, but don't nag the Pre-OT on it, or you'll stir more up because all the BTs remaining are sort of incomplete blows!

As you run "NED for OTs" there's a certain amount of pressure or somatic remaining at session end. This becomes less from one session end to another.

You can restimulate more in a session than you blow. This can be checked for on the meter and handle those restimulated in the session but not blown.

The session is usually started by 2WCing to F/N, or flying Ruds. But the auditor must realize that charge in restim comes from restimulated BTs and clusters. Shocks or stress in life restimulate BTs and clusters who then copy the restimulation, and this

restimulation is a wrong incident for them as it is only a lock on whatever they are stuck in. You handle any out-Rud BTs or restimulated BTs at the beginning of session. If the TA is high, do not try to 2WC it down, or go off Pgm onto a C/S 53, check for and handle BTs or clusters in restimulation, or if there is evidence of Out-Int, check for and handle any BT or cluster with Out-Int first. Care must be taken at beginning of session not to ask for Earlier Similar that don't exist, nor to restimulate more than is in restim. You're only trying to get any out-Ruds or restim out of the way so you can get onto the Body of the Session.

The Pre-OT probably shouldn't watch movies or TV during this Rundown, as BTs tend to make pictures of the movie and hang up in them, requiring handling at beginning of session. If too much restim occurs due to watching movies or TV, get the Pre-OT to stop watching them during the Rundown.

I had earlier found that Vitamin B1 would turn off dreams or nightmares and that a lack of Vitamin B1 would make a pc more susceptible to having dreams or nightmares. Apparently lack of B1 makes BTs stick to bone structure, more susceptible to restimulation, and harder to blow. A session done on a Pre-OT who had a B1 deficiency ran very slowly with great difficulty blowing BTs and clusters. The session was very "gluey". Taking Vitamin B1 resolved this and BTs and clusters became easy to blow again. Pre-OTs on NED for OTs should take 500 Milligrams of Vitamin B1 (Thiamine Hydrochloride) daily, and if they experience dreams, nightmares, or difficulties blowing BTs and clusters, then the dosage should be increased.

A right date or location for one BT or cluster can act as a "wrong date" or "wrong location" for another BT or cluster, as it isn't correct for their incident, and pressure and mass can build up on this during a session where Date/Locating is done. Meter check for "wrong date?", "wrong location?". Indication of this when it has occurred will relieve the pressure and blow the TA down. BTs can also build up a protest ridge on this.

Generally the TA will move in a pumping action, BDing as BTs and clusters blow. The general session pattern is for the TA range to get higher and higher and then pump on down to lower range, which is the ideal point for ending session. A session continued past this resulted in cross-restimulation and difficulty in blowing BTs.

The session must be well ended, as you are ending the session for others (BTs and clusters) - not just for the Pre-OT. "END OF SESSION" given Tone 40, may have to be repeated to ensure the session is in fact ended. You will also sometimes encounter "last call" BTs and clusters. Just as you are about to end the session, some BT or cluster may pop up to be handled - this will often occur on "Say or ask?" - let the Pre-OT handle any such "last call" BT or cluster. To handle restimulation accumulated in the session, you can tell BTs to "Come to present Time" before ending the session. Then end the session well and thoroughly.

A usual session EP is an F/Ning TA.

NED for OTs Series 19

C O N F I D E N T I A L

TA AND NEEDLE BEHAVIOUR

A reason why "NED for OTs" is an audited action, rather than Solo is because two electrodes (one can in each hand) gives a greater depth of read than a one hand Solo can. A Pre-OT can run out of reads on a Solo can to a point where the needle just F/Ns, but on 2 cans reads will show. This is because you are dealing with dormant BTs and clusters, that are dead - even below unconsciousness and out of PT. They have to be activated, by Pre-OT's attention.

During the Rundown the sensitivity may have to be raised as there is getting to be less and less there to impinge and read on the meter. This does not reflect the Pre-OT's case state, just the amount left to run. F/Ns will become more and more frequent.

During a session, the TA works up into a higher range and pumps back down to lower range again (the usual ending point for a session); e.g. TA at start of session = 2.5. During session TA works up to 3.7, then pumps back down to 2.5 and the session is ended off. Continuing past this point results in over-stimulation of remaining BTs and clusters.

The TA moves with a "pumping" action, BDing on blows. The BD on a blow is not the impulse of the BT or cluster leaving, it's the sudden decrease of resistance as the mass blows. The size of BD is relative to the size of mass of the BT or cluster. When you put attention on them and start waking them up, there's a sudden increase of mass. When they blow, there's a sudden decrease of mass. This is what registers on TA and makes the TA pump up and down.

The TA is an indicator of progress through the rundown - you will start getting a floating TA, at some point, which will become more frequent. Do not continue a session past a sudden large BD to F/Ning TA, just end off the session.

Sometimes the Pre-OT will experience a continuous blow or continuous flow phenomena. This happens after the Pre-OT has blown a BT or cluster who was holding others in, then the rest will blow easily, often in a continuous blow. This shows on the meter as continuous fall or slowly BDing TA. Later it will show as a "BDing F/N" - the needle F/Ns while the TA falls, and this may go into an F/Ning TA and that is the EP for that session.

A later prediction factor which shows progress through the RD, is a change of needle pattern. The LFBD on a blow gets much faster, than before. This is not a bigger BD it is a faster fall and BD. The rises are faster too, so you have a needle moving at about two or three times the speed it was moving previously, and this speeding up of the needle can happen quite suddenly in the session, and is very noticeable.

NED for OTs Series 20

C O N F I D E N T I A L

HOW YOU OPERATE A METER

On NED for OTs you have a situation where the F/Ns are getting wider and wider and often going into an F/Ning TA.

You also have less and less mass or charge left on the case the further through the Rundown you go.

Therefore the auditor must be an expert at handling the TA, Sensitivity knob and keeping the needle on the dial when asking a question or assessing. Initial reads are often small (due to small amount of charge remaining), and the Sensitivity has to be cranked way up to catch these reads. The way you do this is by handling the TA with index and second finger, and the Sensitivity knob with the thumb.

Drill operating the TA and Sensitivity knob with E-Meter Drill #11 "Superlative TA handling", until you have mastered it.

The total amount of TA action per session at this level is low. Usually around 1.0 - 2.0 divisions, rarely as high as 6.0 divisions.

It does not compare with TA action at lower levels at all.

An F/Ning TA is often the signal to end the session so how do you handle an F/Ning TA? You get expert in the two finger and thumb TA technique.

NED for OTs Series 21

C O N F I D E N T I A L

REVIVIFICATION

During NED for OTs research I discovered that beings do not just reviv in time. They also reviv in location. You can have a guy totally reviv'd in time, he's stuck down the track in an incident which is PT for him. Anything which he views, is viewed from this point in time. It is when he is.

A being can also be in a reviv in place or location. That is where he is. Everything he views is viewed from that location, that viewpoint in space. They're "battered all over the universe". A BT can think of himself as up there, looking down at himself. A total wrong viewpoint. He's in a reviv and everything he does is from a stuck viewpoint, so he's operating with a stuck spacial point of view. Say the guy is reviv'd in Flanders, everything he does is from the viewpoint in Flanders - even tries to look at himself (now) from Flanders. He's operating in PT from some place down the track.

THOUGHT DISASSOCIATION

Thought disassociation follows a point of view pattern. In a reviv, they're talking to you from an altered point of view, so you get disassociated thought. Say he's in a reviv of location, in a radar station in space. You ask him "Where are the books?" - he looks at a radar screen and says "They're going away".

I know a case who had an accident. She thought she left the body and went to a between lives implant and returned to the body. But there has been no between lives implant in that place for eons! What happened is, she was reviv'd in a between lives implant. She had the accident and went exterior, she thought she went to this between lives implant because that's the location she was reviv'd in.

This is a matter of old fixed viewpoints in spacial locations. You can often cure a case with the process "Where would you be safe?" He might go through a heavy reviv

on the process and he might “do a bunk” - going back to his last point of view, location-wise. That point of view is still out there. That’s why D/L works. You blow that point on Locate step. It’s when and where they are, as they’re not in PT.

That is where he is “safe”, that’s Thought Disassociation, and that’s small pictures - because he’s in a picture, looking at a picture.

These are the mechanics of the Bright Think Rundown (Disassociation process) which can be run on anybody. Running it is not part of NED for OTs as it is a separate RD.

OBJECTIVE DUB-IN

This is a different phenomenon from Thought Disassociation and spacial reviv.

He looks at that wall, and because it’s not safe to look at the wall, he makes a picture of the wall and brings the picture back to him and looks at the picture of the wall. He’s so far south he can’t confront anything that’s in front of him. You tell him to look at the window, he sort of reaches out to the window with a beam or something, makes a picture of it, and pulls the picture back up to him, looks at it and tells you the window has bars on it. This case requires objectives until it’s safe to look at something and perceive it.

C O N F I D E N T I A L

ANATEN

When a dormant BT wakes up it acquires mass. He's "not there", and then when attention is put on him he acquires mass. He's in some artificial valence (which produces mass). When some recognition is granted him, he goes in valence and blows. There's a ridge when a thetan feels under attack, or maybe unacked - first reaction is to stop, so he mocks up mass.

A BT sitting around or on a nerve channel, who is awakened and suddenly mocks up mass or a ridge, will shut down the nerve and knock the guy anaten - knocks the body anaten - not the pc. In the head especially, when a cluster suddenly mocks up mass, it shuts off nerve channels.

Some people who are deaf or blind might simply have a cluster sitting on a nerve, and it's gone on so many years the nerve atrophies. Catatonics may be suffering from this sort of knockout. This explains why a tactile process works - you run tactile on the bed, etc, after an accident and the guy comes out of it.

Another source of anaten is a being exuding anaten - he can be a piece of anaten - and he also exudes anaten, and beings around him go anaten. It is a feeling - an unconsciousness feeling.

Cluster A going into anaten, then influences cluster B, and then cluster B comes up tone into unconsciousness, and you get anaten. These clusters exist as solidities way below unconsciousness, and on III don't respond at all. Both phenomena above produce anaten.

"SOMETHING THAT ISN'T THERE"

It's also possible to run into a BT thinking he is "negative mass" and cutting off perception or sensation in an area.

Occasionally you may run into some BTs hanging together in a mocked up vacuum.

Some BTs have a “something that isn’t there”. They were withdrawing from something, but there was nothing there. It’s either suppressed out of existence or it happened once and they stuck in the pattern of withdrawing; they can even justify and think there’s something they’re withdrawing from. They put something there to withdraw from - a negative mockup. Or they think another BT is putting something there, that isn’t there.

SOMATICS

Sometimes they blow and a somatic turns on - two beings crunched together and at the point of “crunch”, they get a somatic.

It takes a multiple mass to create a somatic. Whether it’s a number of BTs or clusters, the somatic mechanism is mass versus mass, not cluster versus body, but cluster vs. cluster, or BT vs. BT, or BTs and clusters vs. BTs and clusters, or cluster vs. cluster with a BT squashed in the middle. The cluster vs. cluster somatic is more severe than a somatic in a picture (incident) - unless he were totally revived in the incident. You can also postulate a somatic, but that’s different.

C O N F I D E N T I A L

REMNANT RIDGES

A BT can blow and leave behind a ridge of energy. There are BTs in the energy ridge left behind by another BT.

There's a basic mechanism, some BTs make ridges and masses and other BTs come and cling to that and get stuck and they think they're part of it and they maintain it - after the original BT has blown. You have to look through the ridge and find who's in it - after you've blown the BT who made the ridge. You not only look for the BTs that made the ridge, but also the BTs stuck in it, and keeping it there, and the ridge doesn't fully blow until both mechanisms are handled.

A BT could mock up a pole trap and another BT come along and stick to it. You blow the 1st BT and still have the pole trap, which is being kept there by the BT who stuck in it. So you ask "What are you?", Ack, "Who are you?" and blow BT who was stuck to it. The whole body is a trap because it's BTs getting stuck to BTs.

You blow the thetan mocking it up first and it tends to evaporate, but you then have to handle the others.

They will actually create anything in sight - low havingness - obsessive havingness or holding on to the familiar.

NED FOR OTs - REPAIR LIST

This list is to be assessed Method 3 and handled by the auditor if he runs into a bog in session. Don't continue this list past the point where the BPC has been repaired as it is a repair list.

Any line reading on this list could be wrong with many BTs or clusters. That is why it must be done Method 3, and each reading line must be fully handled before proceeding on down the list. (E.g. on Q1 "BT or cluster with Out-Int?" - there may be one or many, and each would have to be handled.) When the line being handled doesn't read, continue the list.

1. A BT OR CLUSTER WITH
 - (a) OUT-INT? _____
 - (b) A WRONG ITEM? _____
 - (c) AN OUT-LIST? _____
 - (d) A WRONG INDICATION? _____
 - (e) AN OVERRUN? _____
 - (f) WHAT WAS CORRECT FOR ONE WAS INCORRECT FOR THE REST? _____
2. RESTIMULATED MORE THAN WERE BLOWN? _____
3. OVER-RESTIMULATION? _____

4. COPY? _____
5. AUDITED WHILE HUNGRY? _____
6. AUDITED WHILE TIRED? _____
7. AUDITED OVER PT STRESS? _____
8. PTS CONDITON? _____
9. SESSON WAS TOO LONG? _____
10. AUDITING CONTINUED PAST A MAJOR WIN? _____
11. A BT OR CLUSTER HUNG UP IN A PAST SESSION? _____
12. A BT OR CLUSTER MESSED UP IN AUDITING? _____
13. YOU THOUGHT IT WAS YOUR CHARGE? _____
14. DATING BEING DONE WHILE OTHER BTs WERE
IN RESTIM? _____
15. STARTED DATING A BT OR CLUSTER WHILE
ANOTHER WAS INCOMPLETE? _____
16. TRYING TO DATE A COMPOSITE MASS? _____
17. LEFT ONE BT OR CLUSTER INCOMPLETE AND
STARTEDACTIVATING ANOTHER? _____
18. LEFT AN ACTION INCOMPLETE? _____
19. A CUMULATIVE CLUSTER LEFT INCOMPLETE? _____
20. JAMMED SEVERAL BTs AND CLUSTERS TOGETHER? _____
21. JUMPED FROM ONE BT OR CLUSTER TO ANOTHER? _____
22. FAILED TO IDENTIFY A MASS BEFORE HANDLING IT? _____
23. TOLD SOMETHING READ WHEN IT COULDN'T HAVE? _____
24. TOLD SOMETHING DIDN'T READ WHEN IT SHOULD
HAVE READ? _____
25. CROSS-COPYING? _____
26. WAS BPC MISOWNED? _____
27. A BT OR CLUSTER WHO HAS
AN ARC BREAK? _____

- A PTP? _____
- A W/H? _____
- AN OVERT? _____
28. TRYING TO HANDLE SEVERAL BTs OR CLUSTERS AS ONE INDIVIDUAL? _____
29. A SINGLE BT THINKS HE'S A CLUSTER? _____
30. A CLUSTER THAT THINKS HE'S A SINGLE BT? _____
31. A BT AUDITED PAST CLEAR? _____
33. AN INVALIDATION OF STATE OF CLEAR? _____
34. CROSS-RESTIMULATION? _____
35. BTs RESTIMULATED BUT NOT BLOWN? _____
36. A BT OR CLUSTER PREVENTING OTHERS FROM BLOWING? _____
37. ONE PRINCIPAL CLUSTER? _____
38. PULLING IN BTs? _____
39. RESTIMULATION BETWEEN SESSIONS? _____
40. RESTIMULATION IN SESSION? _____
41. RESISTING CHANGE? _____
42. A BT OR CLUSTER ON SUCCUMB? _____
43. PULLING IN BANK TO EXPLAIN A PHYSIOLOGICAL CONDITION? _____
44. SOME OTHER MISCONCEPTION? _____

RESISTANCE TO CHANGE

Some BTs are stuck; they are resisting change. You're asking them to change position by trying to blow them. They go more solid because they resist change. Like a Reactionary. Maybe the only message they receive comm on is an order to change. Therefore one has the option of as-ising their resistance to change, by getting "not to change" off.

Ask:

"When did you decide not to change?"

"What began that?"

This way you get off the decision not to change, and the earlier beginning that preceded it.

NED FOR OTs - CHECKLIST - PRE-OT ADVANCE PGM

(Put on left inside cover of folder and
keep it up to date.)

(Pre-OT's Name)	(Date Started)	(Org)
-----------------	----------------	-------

The auditor checks off each step when done. The number after each step is the relevant NED for OTs HCOB Series number.

PREREQUISITES

Pre-OT is OT III (or above)	_____
Pre-OT is not in the middle of another major action	_____
Pre-OT is not on a TRs Course	_____
Pre-OT has security clearance	_____

SET-UPS

D of P interview to get data on Pre-OT's conditon.	_____
Remedy any Vit B1 or Calcium deficiency (NOTs 18, 31)	_____
Assess C/S 53 Section A, if valid read on Out-Int do End of Endless Int Repair Rundown	_____
If Pre-OT has had a recent bad session, repair it	_____
If ill or injured handle ith an Assist (NOTs 3)	_____
Handle any life enturbulation with Ruds or 2WC to F/N	_____

CAUTION

Do not be surprised if these steps go out of order, and dont' force the Pre-OT to follow this exact order because his case may not be stacked up this way, although in general it will be found to be this order:

ADVANCE PGM

1. Indoctrination Step & clearing words (NOTs 4, 27 #2) _____
2. Perception Step. (Optional) (NOTs 27 #3) _____
3. D/L point when Pre-OT went Clear (NOTs 11, 12, 17 #4A, 43) _____
4. Handle misownership of pictures by Pre-OT (NOTs 11, 12, 27 #4A, 43) _____ *
5. Handle BTs who went Clear (NOTs 11, 12, 27 #4A, 43) _____
6. Handle BTs who went Exterior (NOTs 11, 27, 43) _____
7. Handle BTs audited past erasure (NOTs 11, 12, 27, 43) _____
8. Handle BTs who were overrun, & Copies (NOTs 11, 12, 27, 43) _____ *
9. Repair BTs run on uncharged items (NOTs 11, 12, 39, 43) _____
10. L3RF on messed up Dn chains (NOTs 39) _____ *
11. Repair any goofed D/L on a cluster (NOTs 9, 12, 27 #4G) _____ *
12. Repair of Past Auditing by Name of Auditor (Optional, only if interested). (NOTs 11, 12, 13, 27 #4F,43) _____ *
13. LDN OT III RB (NOTs 41) _____
14. Repair List for Errors in Running OT III (NOTs 41, 42) _____ *
15. Handle PTSness, if applicable (NOTs 35) _____ *
16. Handle R/Ses (if Pre-OT has R/Sed) (NOTs 36) _____ *
17. Handle Mass Mistaken for Mass of Body (NOTs 15, 27 #5) _____ *
18. Handle BTs/clusters Being Body Parts (NOTs 27 #6) _____ *
19. Handle BTs On or Around the Body (NOTs 14, 27 #7) _____ *
20. Generally Spotting and Blowing BTs/clusters (NOTs 27 #8) _____ *
21. Remnant Ridges (& partial blows) (NOTs 23, 27 #9, 45) _____ *
22. Flow Assessment Recall Process (NOTs 27 #10, 28) _____ *
23. Generally Addressing the Body (NOTs 27 #11) _____ *
24. Specifically Addressing Chronic Somatics (NOTs 27 #12, 32) _____ *
25. Mass That Kicks in when Pre-OT Looks into Body (NOTs 27 #13) _____ *
26. Perimeter Masses (NOTs 33) _____ *
27. BTs with Mis-U words Rundown (NOTs 46) _____ *
28. Cleaning the Body of BT/cluster Masses (NOTs 27 #14) _____ *
29. Verify whether Pre-OT has achieved the full EP of NED for OTs as described in NOTs 27, pages 8 & 11. If so Declare. _____
If not, locate the unflat/incomplete Pgm step(s) and handle. (The NOTs Repair List - NOTs 24 - can be used here, or any point on Pgm when there are unresolved BTs or PBC.)
DO NOT DECLARE UNTIL PRE-OT HAS THE FULL EP.

* Shows where on Pgm Rest Points may be taken (ref: NOTS 29).

NED for OTs Series 27

C O N F I D E N T I A L

“NED FOR OTs” - CHECKLIST

The basic biological structure of the body is transparent to a thetan. The Pre-OT's perception hangs up on BTS and clusters. These BTs and clusters have the ability to change and control a thetan's perception whereas Mest won't. BTs and clusters are too close to a thetan's wavelength and can therefore exert control. A primary target for NED for OTs is: “things that are not part of the biological machine (body), but think they are and get in the way.” This is what you want to handle. The Pre-OT's sight hangs up on these BT/cluster masses. The successive steps of the Rundown have to do with the parts of the body he can see, the phenomena encountered and the processes you handle these with. The actual criterion the auditor uses is What is the Pre-OT looking at? What can he see? and Can he blow it?

The ideal scene: “A transparent body which does not interfere with the sight of the thetan and is free from unwanted sensations, pains, or pressures.” The primary error a thetan makes is mistaking these BT/cluster masses for the body or mistaking another's pictures as his own. The procedure has a cyclic pattern of getting rid of the obvious ones, then dead or unresponsive ones, then obvious ones, over and over. You are liable to run into any of these manifestations at any time and need to know the processes which handle.

1. HANDLING WHAT THE PRE-OT'S ATTENTION IS ON

(Establish this by folder or by D of P interview or both. You should also check on what his attention is avoiding.)

- 1A. Repair using LDN OT IIRB, if needed.
- 1B. Repair of any recent bad session.
- 1C. Any needed Assist.

- 1D. Remedy of any vitamin or mineral deficiency (especially Vitamin B1 or Calcium).
- 1E. End of Endless Int Repair, if needed.

(All the above are optional steps, and depend on the current state of the Pre-OT. Mainly determined by the question, What is the Pre-OT's attention on? and, What is his attention avoiding? - care must be used with the later, not to throw the Pre-OT in over his head.)

2. INDOCTRINATION STEP

This consists of clearing definitions of MisUs in OT III materials, clearing definitions of terms used in NED for OTs, reading the basic theory issues of NED for OTs, and indoctrination in the basic technique of the Rundown. It is a mandatory step.

3. PERCEPTION STEP

This is an optional step, done if the Pre-OT's perception is not up to perceiving mental masses, an ability necessary to this Rundown. It could be tested as simply as asking the Pre-OT to close his eyes and tell you if he can see through the head or the body. It is only done in order to get him able to perceive mental masses(BTs and clusters), which is the EP of this step.

4. PAST AUDITING

(This step is done if "Past Auditing" reads and Pre-OT is interested. If not, don't take it up. If not taken up at this point be alert for Pre-OT colliding with BTs and clusters hung up in past auditing at a later point during the Rundown and if there is a bog check for and handle past auditing.)

- 4A. D/L the point when Pre-OT went Clear, and handle mis ownership of pictures by Pre-OT.
- 4B. Handle BTs who went Clear and were audited on engrams, mistaking other's pictures as their own and resulting in invalidation of their State of Clear.
- 4C. BTs who went Exterior and were prevented from blowing or audited past Exterior.
- 4D. BTs audited past erasure resulting in invalidation of erasure.
- 4E. Copies of any of the above, including the situation where the original BT has blown leaving behind a BT who copied the overrun, etc.
- 4F. Repair of Past Auditing by Assessment of Names of Auditors, including Solo auditing and self-auditing.

- 4G. Repair of Wrong Dates, Wrong Locations, including any partially or wrongly dated or located cluster. (Note that a right date or location for one, will be wrong for those remaining.)

(NB: Do not overdo this step as auditing is late on the track, and is not the basic for BTs and clusters. Past Auditing has to be repaired to the degree that it gets in the way of doing anything else on NED for OTs. If you tried to handle all the auditing there had ever been on the case you could go on forever. You may run into some BT who's been misaudited when doing later steps, but Repair of Past Auditing is done to a point where Pre-OT is happy with it, and it isn't getting in the road of NED for OTs. The danger of handling too much past auditing is cross-restimulation.)

Phenomena you are likely to encounter on Past Auditing step:

- * Dormant BTs woken up by Dianetic or NED auditing.
- * A Shell BT.
- * Body itself being a "magnet" for BTs/clusters due to a dietary or mineral or vitamin deficiency.
- * Misownership of pictures and of incidents.
- * BTs in valences.
- * Copying of current or recent stress or shocks, between session restimulation.
- * BTs with Out-Int.
- * BTs who are stuck ON
- * BTs/clusters stuck down the track or out of PT.
- * BTs/clusters jammed together by rough auditing or misdating
- * BTs/clusters with an intention or goal opposed to auditing.
- * Over-correction, i.e. what is being corrected on one is "uncorrecting" on another.

Cognitions or EPs encountered on Past Auditing step:

- * Realization that pictures are BTs' or clusters' and not the Pre-OT's, with a confirmation of Pre-OT's State of Clear, and the clearing up of attendant mysteries.
- * Relief from BPC and somatics.
- * Realization like the S/W EP of "I'm not going to get any worse".

5. MASS MISTAKEN FOR THE MASS OF THE BODY

(The primary error a Pre-OT makes is in thinking that the mass or solidity or sensation he/she experiences is the body.)

The action taken on this step is to have the Pre-OT look at his body and spot masses that are not the body and blow these either by inspection, or by the various techniques.

Phenomena You are Likely to Encounter on this step:

- * Facsimiles of a body or bodies superimposed over the body.
- * An impaction of pictures.
- * A BT with an overt on other BTs or cluster, e.g. having made them into a cluster.
- * Getting misdirected by the picture or mass the BT puts up - the Pre-OT needs to be taught to shift attention from the picture or mass to the BT or cluster.
- * BTs or clusters stuck on the surface, i.e. BTs who WENT ON.
- * BTs who think they are a body or think they are necessary to the running of a body.
- * Central core of BTs/clusters that other BTs and clusters are sticking to.

Cognitions or EPs Encountered on “False” Body step:

- * Realization that the body is transparent or translucent to an OT and that the mass perceived is not the body.
- * Somatic relief and lessening mass.
- * False exterior perception caused by the Pre-OT’s attention being pulled out by BTs as they are departing.
- * Realization that BTs think they are pinned to the body, but are actually pinned to other BTs and clusters.
- * Body getting less tense and mass expanding and getting less rigid.

6. BTs/CLUSTERS BEING BODY PARTS

This step directly addresses BTs or clusters who are being body parts such as “a hand”, “a foot”, etc. The Pre-OT should be asked to look at a part of his body and see if it is solid and then blow the solidity by inspection or by various techniques. Body parts can be called off by the auditor and, those that read, handled.

Phenomena You are Likely to Encounter on this step:

- * BTs and clusters being “a hand”, “a brain”, etc.
- * BTs and clusters who think they can’t leave as they think they are indispensable to the functioning of the body.
- * BTs and clusters being “negative” mass, invisible, being “model forms”, in the valence of body parts (i.e. terminals) and BTs/clusters being body conditions (i.e. unconsciousness, or a “broken leg”).
- * BTs/clusters sitting on a nerve channel and shutting off perception or causing anaten, and BTs/clusters exuding anaten.
- * Composite masses that need to be split up by using the “thetan hand” technique and then blown piece by piece.
- * BTs/clusters being “a no hand” or “a no leg”.
- * BTs/clusters holding other BTs and clusters in.
- * Somatics caused by BTs and clusters locked together i.e. BT vs BT or cluster vs cluster.
- * BTs/clusters being in the valence of anything.
- * BTs/clusters going into the valence of a person in PT.
- * BTs/clusters holding other BTs/clusters in front as a shield.
- * PTS BTs who have had one SP in common - over several lifetimes.
- * BTs/clusters transferred from another person to Pre-OT’s body, e.g. BTs from his grandmother, etc.
- * BTs/clusters being an illness or aberration or an accident (Pneumonia, wound, car wreck, etc. - they are also in the valence of a picture of it).
- * BTs/clusters being significances (tired, anemesis, etc.).
- * BTs/clusters being ideas or identities that are ideas (a Christian Scientist, insanity, “go to town”, etc.).
- * Plural identity (an “us”).
- * One that thinks it’s many, and many who think they’re one.

Cognitions or EPs Encountered on “Body Parts” step:

- * Less pressure and restimulation, becoming more noticeable at session end and from one session end to another.
- * Blows getting easier and faster.

- * Looks like the number is infinite and you'll never get rid of them as they just keep popping up but realizing that it isn't really this way and that progress is being made.
- * A case change of Extroverted Attention, i.e. Pre-OT's attention extroverted and on the environment.

7. BTs/CLUSTERS ON OR AROUND THE BODY

This step is run generally with the Pre-OT finding and blowing BTs and clusters as he encounters them. This includes BTs and clusters that are on the body, inches from the body, feet from the body, yards from the body, or way off - all of these in which the auditor is interested are connected to and are influencing the body. One is not interested in other people's BTs or clusters but only those directly influencing the Pre-OT's body. Because the Pre-OT's "attention distance" has increased by the time you get to this step, this is relatively easy to do. The auditor of course is not interested in using this one Pre-OT to clear the planet but should not object too strenuously if the Pre-OT engages in some side actions that do not directly concern him, but realize that this is not this step or any other step. Care must be taken to ensure that only one mass or area or category is restimulated and fully handled before activating another. The caution from OT III pack about not using too wide an attention span applies here.

Phenomena You are Likely to Encounter on this step:

- * Misidentified BTs and clusters who have copied each others' incidents and implants.
- * BTs/clusters switched in time (misconception).
- * BTs/clusters switched in location (misconception).
- * Remote BTs, i.e. stuck on another person or in another location where Pre-OT's attention is fixed or drawn to.
- * BTs/clusters with "something that isn't there".
- * Multiple masses creating somatics.
- * Invisible, Secret, and Hiding BTs and clusters.
- * Hypnotized BTs and somnolent BTs and clusters.
- * BTs mocking up things they think they are.
- * Old Between Lives areas, remote implant stations of the past.
- * BTs/clusters who, being stuck in the past and look-forward, think they are looking at the future.

Cognitions or EPs Encountered on this step:

- * Body getting lighter, more relaxed and more in control. Much less mass around.
- * Realization that BTs/clusters were causing body shape distortions and that body is “moving back into position”.

8. GENERALLY SPOTTING AND BLOWING BTs AND CLUSTERS

This step consists of having Pre-OT locate and blow any BT or clusters that are visible or perceivable, including handling any BTs or clusters restimulated.

This is based on the old maxim that “If you get enough charge off . . . or if you keep on getting charge off, you will make case gain and an entrance to the case will show up”.

You are likely to encounter any of the phenomena or manifestations of BTs and clusters. There is a general cyclic pattern of encountering BTs/clusters that are hard to blow or that are holding other BTs/clusters, followed by a series of easy blows, then the same pattern repeats over and over.

9. REMNANT RIDGES (PARTIALLY BLOWN RIDGES, CLUSTERS)

There is a mechanism of a BT or cluster making a ridge, then another BT or cluster comes along and sticks to the ridge. You blow the BT or cluster who made the ridge first, then a remnant of the ridge remains containing BTs who stuck in it and are now keeping it there and you have to blow these off too - they generally blow easily. Another example of this is a BT being a pole trap. Another BT comes along and sticks to the pole trap. You first blow the BT being the pole trap and then you have to blow the BT who stuck to it.

The auditor has the Pre-OT look for old ridges, remnants of ridges and masses, and completes handling these to fully blown.

Phenomena You are Likely to Encounter on this Step:

- * BTs/clusters left stuck in the ridge or picture that was mocked up by another BT or cluster.
- * BTs/clusters being objects in another BT's or cluster's pictures. Such a picture is hard to blow unless you recognize that the picture is composed of BTs being the parts of the picture.
- * “Hard core” BTs and clusters that are very hard to blow.
- * BTs/clusters with Out-Int.
- * BTs/clusters with stuck flows.
- * BTs stuck on the inside of a ridge who tried to blow but get caught by the ridge. When you blow the ridge you find a lot of BTs blowing out from under the ridge.

- * BTs and clusters being ridges.
- * Apparent inert masses that behave like ridges and have to be brought to life with a “Hello - OK” technique.
- * Two BTs pushing so hard against each other that each one thinks that it’s blocked by a ridge and to blow the ridge you have to blow the two BTs.

Cognitions or EPs Encountered on this step:

- * Body distortions clearing up.
- * Cognition of “I am well”.

10. FLOW ASSESSMENT RECALL PROCESS

This process handles BTs and clusters with very stuck flows. It is run per the HCOB on it, to its EP.

Phenomena You are Likely to Encounter on this step:

- * BTs/clusters unable to move on the time track because time itself becomes a stuck flow forward to them.
- * BTs/clusters who dive down the time track on a time stuck flow basis.
- * BTs/clusters who suddenly pop into view as they were in Revivs down the time track and weren’t even in sight (which is what gives the Pre-OT the idea that it’s endless).
- * BTs/clusters (masses) who appear to be in PT (whose pressures are in PT) but who are really way down the track and who need only a small jerk, given by the Pre-OT, to unstick them from the track.
- * The erroneous idea of the Pre-OT that he is in the past because he is being influenced by BTs and clusters that actually are in the past.
- * Fear of the future which is really a protest bringing about the appearance of being stuck on the time track and that the time flow can actually stick someone.

11. GENERALLY ADDRESSING THE BODY WITH NED FOR OTs

The auditor now has the Pre-OT look at the body and in particular any somatic area or area of chronic somatics.

Phenomena You are Likely to Encounter on this step:

- * False body parts, i.e. a false leg (BT or cluster being a false leg).
- * BTs/clusters transferred from another person who had such a physical

condition, or BTs or clusters who copied such a condition.

- * BTs/clusters stuck in drugs or painkillers or anaesthetics used or taken in the body area.
- * Very small BTs that come up to tremendous size before blowing, some with concept of “negative” space.
- * Heavy mass, unresponsive or inert BTs/clusters.
- * BTs stuck in body beingnesses, both body parts and body conditions.
- * BTs/clusters who are “making a body”.
- * Identityless BTs/clusters.
- * BTs/clusters that are Dead, that think they’re Mest, that think they are molecules or planets.
- * A cluster causing a dislocated bone or trying to break a bone or spine, plus, the BTs or clusters being the damaged body part and holding onto the damage or copying it.
- * BTs/clusters who are being broken legs, misformed arms, cancer, damaged brains, or other non-optimum body parts or conditions.
- * BTs or clusters operating on a refusal to make pictures - the negative of obsessively mocking up.

Cognitions or EPs Encountered on this step:

- * Extroversion EP for Session and F/Ning TA.
- * Awareness that anything perceived as mass or somatic in the body is not the body, but comes from BTs/clusters.
- * Cognition re mocking up pictures due to loss of memory.
- * Actual Exterior perception of Pre-OT increasing.
- * Case change of reaching into body and finding nothing there (i.e. in an area of body), and it being clean for the first time.
- * A cognition of personal identity - much more intense than previously.

12. SPECIFICALLY ADDRESSING CHRONIC SOMATIC AREAS OF BODY

This is a more specific address to any area of chronic or recurring somatic. Some chronic somatics depart very fast and don’t return. These are almost miracle in nature. Other chronic somatics gradually lessen and can disappear in the course of the whole Rundown. So don’t despair if you don’t get an instant alleviation of the chronic somatic but just keep on with the Rundown and don’t specialize in chronic somatics. Also be very cheered up when you

hit an instant disappearance of one. Both conditions can exist in the same Pre-OT on different chronic somatics.

Phenomena You are Likely to Encounter on this step:

- * An Aura - which is a whole package of BTs and clusters formed into the shape of a body and aura with other BTs and clusters stuck in it.
- * Very heavy anaten holding clusters glued together.
- * BTs and clusters in other parts of the body affecting the somatic area.
- * BTs and clusters in a very suppressed or compressed state that blow up to huge size and mass and surround and go through the whole body.
- ** BTs and clusters behind, or on the other side of, or inside , bones or organs, or on the other side of a ridge - these are very likely to be missed as one wouldn't think to look there.
- * Nulls or unresponsive BTs/clusters that are totally out of communication and need to be put into Comm by running "Hellos and OKs" on them.
- * A BT or cluster believing he is his own picture - or someone else's.
- * BTs or clusters being "negatives" - i.e. a "no _____" like a "no stomach", etc., these come about from intentions to obliterate and probably are the root of sickness.
- * The manifestation of Pre-OT trying to look at or into a body part or area and a mass or ridge kicking in, between the Pre-OT and the area.

Cognitions or EPs Encountered on this step:

- * Cognition "I can do anything any other being can do".
- * Lot of somatic blows, and the first real gain on the somatic area.

13. MASS THAT KICKS IN WHEN PRE-OT TRIES TO LOOK TOWARD OR INTO AN AREA OF THE BODY

Such a mass can be quite severe and can knock the Pre-OT anaten. As it is BT or cluster mass and prevents perception, it must be handled in order for the Pre-OT to be able to see or reach into the body. The auditor gets the Pre-OT to look and then handles the mass that kicks in until it is fully cleared up, then has the Pre-OT look or reach into his body again, and then clears up the next mass that kicks in, and so on, until he can reach into the area of the body.

Then you clean up that area of the body fully, and the Pre-OT will be able to reach further into the body. As each successive area of the body is cleaned up and becomes transparent his reach is further extended toward the ideal scene of a body that is transparent to the OT and does not impede his perception or control.

Phenomena You are Likely to Encounter on this step:

- * Any or all of the previous phenomena.
- * BTs outside of and at a distance from the body putting mass on the body.
- * BTs and clusters that are so inert that they have to be thrown off physically - plus you also have to throw away the “arms” you threw them off with.
(NB: This difficulty in blowing off BTs has also been caused by a deficiency of Vit B1 and/or insufficient rest.)
- * BTs/clusters who apparently had Out-Int but didn't, they had copied other BTs who had had Out- Int.
- * BTs and clusters who supposed they were being pulled in but weren't, they had just concluded that they were.
- * BTs being a damaged body part and because they were being damaged couldn't do anything about it.

Cognitions or EPs Encountered on this step:

- * Ability to look cleanly into areas of the body that couldn't be reached into cleanly before.

14. CLEANING THE BODY OF BT/CLUSTER MASSES

The Pre-OT now works on cleaning up the body of BT/cluster masses, one area at a time, until each is clean and transparent to his perception. Each of the various techniques given in the materials are used as needed to blow these BT/cluster masses. You may in some instances have to have the Pre-OT handle BTs Dianetically running them back through a chain of incidents. This can be complex with 3 or 4 BTs and chains crossed.

It is very dicey to run engrams on BTs as, although they may have one mutual one, each one has an earlier chain for it that is different than that of the others in the cluster, so you limit the action to the mutual incident they have in common. Scn Grades O-IV can be run on a BT but this would not be usual as the BTs we're dealing with in NED for OTs are below that.

When the Pre-OT has a transparent body and a clear area around it to some distance (barring perception of other people's difficulties) and when he realized he is alive and very much himself the EP of NED for OTs has been reached.

C O N F I D E N T I A L

STUCK FLOWS, THE GENUS OF A BT

You'll get a lot of blows early on the Rundown when the Pre-OT realizes it's not his body he's looking at, but ridges composed of BTs and clusters, in the shape of his body. Then you get into more hard core ones, they're on such a stuck flow they can't blow.

Out-Int could be the genus of a BT and Out-Int would have to precede a cluster. If Int were out each BT would start identifying into each other's pictures. When a flow is run too long in one direction it will jam up and stick, then it can snap back the other way, e.g. he gets overrun on "going out of things", the flow jams and he snaps back "in", and stays in. There are actually two stages of Int:

- (a) Overrun "get out of";
- (b) The stage of "go in" before "go out".

Of course this is a misconception too, as how can a thetan be in anyway.

What forces him to do it is the vector flow line. The flow of "going out" gets overrun, sticks, then flips back on itself and he "goes in", (and stays in). It's the overrun flow reversing on him that jams him in. His think on it is like "I'm so tired of going out, so I'll stay in". That's his think, but what sticks him in is the overrun flow of "going out", the flow jams and reverses.

There's also a misconception of someone being told he's out when he's in and being told he's in when he's out. And there's having pictures of being out when in and pictures of being in when out. A misconception that they are where their picture is.

What you have run into is a hard core of BTs with Int so badly out you have a hard

time blowing them. Finding the earliest time they “went in” works mechanically, but it must be based on some postulate or idea that what comes later is made by the earlier. The mechanism of an overrun flow sticking and then snapping back in reverse is based on agreement with some set of physical universe laws which are misconceptions.

HYPNOTISM

Maybe Out-Int and a hypnotic condition align. An overrun flow eventually winds up with unconsciousness, and that would wind up to hypnotism. Hypnotism is the state of being under the duress of another’s command. BTs are so suggestible and mock up things, they’d have to be hypnotized. It’s an artificial state brought about by drugs, shock or being under the misconception that they are hypnotized. How do you wake them up? One way is to count 4, 3, 2, 1 and snap your fingers. A short cut is simply to tell them to “wake up”. Or you can ask him “How do you wake up?” - BT answers, you do it, and BT wakes up and blows. One of the techniques from hypnotism is to ask the person how to wake them up, e.g. “How do you wake up?”, BT says “Snore”, so you make a snoring noise, BT wakes up. This works on people or BTs in a hypnotic state. They can be hypnotized by a shock or explosion and then stay in a somnolent state. Part of the anaten you encounter is their state of unconsciousness.

STUCK FLOWS

Out-Int is prior to a cluster. They identify into each other’s pictures and “become one”. So you have Out-Int as a condition for BTs and clusters.

The first condition would be making pictures in the first place. The Book One reason for pictures is that they are a safe way to live without thinking - you don’t have to think, just act on reaction. It’s putting an ability onto a machine. (Maybe what started the current wave of disassociation is that these people are living in a TV (stuck flow) and computer age - even kids at schools have electronic calculators.) Why they make pictures is basically loss. There are large periods on the track when there was no universe or environment and pictures are havingness. Some verse or environment and pictures are havingness. Some thetans think “No pictures” equates to “no memory”. Mocking up pictures is inability to recall - when they lose memories, they then mock up pictures. Somebody mocking up pictures is identityless, so they’re more likely to becoming BTs or becoming part of a cluster. They become identityless and then go into false identities. Destruction of memory is actually caused by misownership of experience.

On NED for OTs you get lots of blows, then you run into these hard core BTs that are hard to blow. They have stuck flows, and it’s a matter of how to unstick a flow. One way to unstick a flow is to reverse the flow. These BTs are hung up on stuck flows of “out” and “in”. They think they’re up against another thetan and actually it’s their own stuck flows that stick them. Flows can stick both ways, you’d only be able to run a process one direction for a short while before it would stick.

One way of destimulating is to tell them “Come up to present time!” There’s a stuck flow of moving along the time track with time. It becomes a stuck flow of moving forward on the time track and one day they move backwards and stick on the track - the stuck flow reversed. That might be why NED works - it moves them back down the track, reversing the stuck flow of time. Moving back on the track is something they haven’t done and it’s

undoing the stuck flow. More than anything we are dealing with stuck flow phenomena, not pictures or anything else.

Another stuck flow phenomenon is reduced awareness, they go anaten and into a hypnotic trance state - maybe out-Int and hypnotic condition align.

A stuck flow is what you're up against in NED for OTs. And that is the genus of a BT, and that's what a BT is, a stuck flow. So any NED for OTs auditor is going to run into stuck flows. The impact or explosion that forms a cluster is the precipitation - the stuck flow is the predisposition . These BTs already had stuck flows and are predisposed to becoming a cluster, the sudden shock or impact precipitates it and they become a cluster.

There's a special trick of blowing BTs by doing an effort-postulate action - go a little bit earlier and they blow through later. All you have to do is give them a little jerk down the time track and they will spring up the time track, as you have unlocked the stuck time flow. A Pre-OT doing this will find it very handy.

It has now been proven by the Flow Assessment Recall process that Int is stuck flows, and it is the prior stuck-flow.

They can try to outflow against an inflow, but that's what a ridge is. The Flow Assessment Recall process will tear up ridges that couldn't blow, it handles BTs that are so stuck they can't blow. It is run by outflow, inflow and "no flow" on Quad flows. You have to run "no flow" as that's the way a lot of BT's are. And the past is a no flow - the past doesn't flow, and they're stuck in the past.

STEPS OF FLOW ASSESSMENT RECALL PROCESS

1. Clear the word "flow" and clear each of the Quad flows (F1, F2,F3, F0) and ensure that Pre-OT understands the direction of each flow.
2. Clear inflow, outflow and no flow .
3. Clear the flows on the Assessment Sheet.
4. This is targetted with the attention directed at one cluster, with a very narrow attention beam otherwise you will have every BT in the body going batty. It's very narrow attention at one small part of the body. It doesn't take very long if your attention beam is narrow. If the attention beam is too wide he will go mad. For example, "the face", "the chest". This assessment has got to be directed at the same area and don't shift the area until you get a BD and F/N.
5. Assessment.

As you are dealing with BTs, you will get better meter reads if the Pre-OT calls the assessment lines. The auditor notes the reads. Put the name of the body part being addressed on the Assessment Sheet. The word "Recall" is not used in the assessment. Just the flow.

6. Take the largest reading line and have the Pre-OT run "Recall (assessed item), on

BTs telepathically. This will produce reads and an sBD or BD and F/N. It is not run past the first sBD or BD or it will overrun and start jumping into another flow. At first sBD or BD F/N, you cease running the process and indicate the F/N.

7. Reassess the Assessment Sheet and run the next largest reading line by Recall process. Continue to reassess and run the largest reading line. Over and over and over. It will eventually go into an F/Ning assessment.

NOTES ON PROCESS

If you get an sBD or BD during the assessment take that line and run it by “Recall - do not continue through the assessment as you have a B Ding item.

If you get a BD F/N on assessment, don't run that line by “Recall_____” as it will just overrun. There was a blow on that line. Indicate the F/N, then continue assessing for next line to run.

Later in the assessment the Sensitivity will have to be raised way up to pick up reads. And you run any slightest read even if only a Tick or Stop.

If during assessment or during the process the TA suddenly drops (BDs) into an F/Ning TA, you don't continue that session. Don't continue to assess, or ask another auditing question. Just simply indicate the F/Ning TA and end off the session. Take up the assessment tomorrow - it may just F/N, or you may get further reads to run. But do not continue the assessment or process past a sudden BD to F/Ning TA.

The EP is when you can't get any more reads with Sensitivity cranked up and you just get an F/Ning assessment.

REST POINTS

While it is not desirable to end off any major RD or pgm before it is completed, for practical purposes when public are getting audited at an AO or Flag, they may not be able to complete the whole of NED for OTs RD due to economic reasons or time available. In such an instance their auditing can be safely ended on any rest point on the Pgm or Checklist; such as one of the minor EPs of the RD, on any major win for the Pre-OT, or on completion of a Checklist (Pgm) Step.

Such a Pre-OT must be told that the full NED for OTs RD is not complete, and told not to receive other auditing. And a return date set up for when the Pre-OT will return to the Org to complete the RD.

C O N F I D E N T I A L

P R O G R A M D E P A R T U R E S

As with any major grade or RD, there should not be any departures from the Pgm. This is especially true on any powerful RD such as this one. It would be completely forbidden to go off Pgm on NED for OTs and run something else. By something else is meant grades, or part of another RD, or some other type of auditing. This hasn't been done but the consequences would be disastrous. This is mentioned to ensure that no one ever does this. There is the exception of a Touch Assist or a Contact Assist but never a Dianetic Assist for sure.

Q A N D A

You can start handling a somatic and make the mistake of leaving it incomplete. You can also make a mistake on mass One and it goes over into mass Two. This gives a general rule:

NEVER GET MORE THAN ONE MASS OR CATEGORY ACTIVE, AND ALWAYS COMPLETE TO AN EP THE MASS OR CATEGORY STARTED BEFORE GOING ON TO ANOTHER MASS OR CATEGORY.

H A V I N G N E S S

Don't run Havingness during the RD, it beefs BTs up and makes them tougher to blow.

BTs and clusters are packed in tight in a total non-confront. What a guy can't confront, he is either obsessively having, or the opposite - he has a Can't Have on it. BTs are in Can't Have, Waste, or below, they don't respond to HAVE, they mostly respond to BE.

Allergies are based on Can't Have and Waste, and BTs are in a total Can't Have, so NED for OTs properly run will probably cure some allergies.

THE THETAN HAND TECHNIQUE

There's another process of getting rid of BTs and clusters. It is not always that magnificent but it is sometimes functional.

What you do is mock up a "thetan hand" and using the edge of it as a sort of knife, you pass it between the body and black masses and sever them off. These masses are attached to the body by strings or lines or suction cups or beams. You sever the line or string holding them to the body. Sometimes the mocked up hand departs with them, because after all it was mocked up and it would of course vanish.

COMPOSITE MASSES AND LAYERED CLUSTERS

You use this technique - the "thetan hand" - to separate ridges and masses, or to split up opposite masses. Two or more ridges may be jammed together into a mass, sometimes there are layers upon layers of clusters. Pass the "thetan hand" between them, between two ridges, or masses or layer of clusters to sever the connection and split them up into separate pieces, which can then be blown, one piece at a time.

COMPLETELY UNRESPONSIVE MASSES

Sometimes you will encounter a mass that is so inert that it won't even come into communication with "Hello and OK". Such masses may have to be thrown off physically, using a mocked up hand. The Pre-OT simply takes the mass and physically throws it off. And then throws away the mocked up hand too - so there is no connection or line back to the body. This has been referred to as the "yo-heave" technique, and while it isn't particularly of benefit to BTs and clusters, it is a way of getting rid of a completely unresponsive mass when all else fails. Such unresponsive masses are not that common. Most commonly, any difficulties in blowing BTs and clusters come from (a) over-stimulation due to too long a session, (b) overrun session EP (F/N TA), (c) lack of sleep or tiredness of the Pre-OT, or (d) a deficiency of Calcium or Vitamin B1. Those are the most common reasons for difficulty and are easily remedied.

NED for OTs Series 32

C O N F I D E N T I A L

CHRONIC SOMATICS, MISSED BTs

If a chronic somatic doesn't resolve there are missed BTs and clusters causing it. There are several ways in which BTs and clusters can be missed or overlooked. First of all is by the Pre-OT thinking that the mass he perceives is the body when it actually is the mass of BTs and clusters.

Next there is the BT or cluster producing a somatic in another part of the body, or influencing another part of the body. Have the Pre-OT trace back from the picture or somatic to the BT or cluster. The Pre-OT can do this even though the BTs and clusters are generally confused about whose picture is whose. As the Pre-OT looks for where the BT or cluster is the meter will read and the auditor can steer the Pre-OT and help him find the position in the body of that BT or cluster.

Some BTs and clusters are hiding, secretive, being invisible, hidden or withdrawn. Ask the Pre-OT to look for BTs and clusters in each of these categories and blow them. Be sure to complete handling one category before taking up another category or you'll get over-restimulation and a beef up.

Then there is the BT or cluster holding other BTs and clusters in or one BT or cluster holding other BTs or clusters compressed or suppressed. Handle the BT or cluster doing this first, then the others will blow off easily. When a very small mass is activated it will increase in size before blowing - there can be a thousand or two BTs in such a mass and sometimes these explode apart as they blow. Although the mass becomes very heavy when it is activated, it's not a big BT, it's a lot of little BTs, under suppression.

You can run into a cluster causing damage to the body, and after blowing this cluster, you then look for and handle other BTs and clusters who were copying it, or stuck in pictures of the damaged area and held in it or holding onto it.

There are BTs and clusters who are refusing to make pictures, as well as BTs and clusters obsessively making pictures. These need to be looked for and handled.

Some BTs and clusters are being inert masses and don't seem to respond until put into communication and could be missed unless the Pre-OT were asked to look for BTs and clusters being inert masses; BTs and clusters being dead or who think they are dead; being MEST; being molecules.

The Pre-OT may think he/she has an aura. An aura actually is a collection of BTs and

clusters mocking up the aura - and sticking in it - as it is a highly electronic mock up. It is being mocked up by BTs and clusters and has BTs and clusters sticking in it. You may encounter something like a whole person - body and BTs and clusters that were suppressed down to nothing - you contact it as a very small mass and it increases in size to a whole body and aura, complete with BTs and clusters mocking it up and sticking in it. But that's what an aura is - a collection of BTs and clusters and that's all it is.

Very small dense masses. These when activated can increase to huge size and mass knocking the Pre-OT anaten, sometimes for quite a long period of time. As the anaten comes off, the mass will start to disintegrate. The anaten is the "glue" that holds them together and when the anaten runs out, the BTs and clusters will blow off easily.

The Pre-OT can work on cleaning out a body part or area of BTs and clusters and get the area looking clean. Then you have the Pre-OT look inside or behind or on the other side of bones or organs or ridges in the area to find BTs and clusters. Unless you have the Pre-OT look inside or behind or on the other side, these would be missed or overlooked. In one instance a somatic didn't start to resolve until this action was done.

BTs and clusters can be conditions (as different from being a terminal) - conditions that they associate with the body - whatever the body can do, e.g. a being who was being "unconsciousness". So have the Pre-OT look for BTs or clusters being body conditions.

A BT or cluster can believe that he is his own picture - or somebody else's picture for that matter. A picture that is hard to blow is probably composed of BTs and clusters being the objects in the picture, e.g. a picture of a field with a tree and a cow in it. The tree is a being being a tree, there's a being being a cow and a being being a field. Together these beings compose the picture. Or you could have one being being a pole trap and another thetan who came along and stuck to the pole trap. So if a picture is hard to blow, check for BTs and clusters being the objects of which the picture is composed. And when you have blown the original beings also blow off any who stuck to it.

Phrases such as "a man of my kidney", "got no spine", "got to have spine", "no stomach for it", confuse BTs and clusters in those body parts and play a role in pinning them in. You may run into such phrases or cliches when asking the What? Who? questions. Just acknowledge and repeat the What? Who? question.

Probably the root of sickness or psychosomatics is in negative beingnesses. BTs and clusters being the negative of a body part, such as "a no hand" or "a no stomach", "a no body", etc. When you ask the What? Who? questions you'll run into answers such as "no hand", then it will flip to the positive "hand", before blowing. These negatives come about from intentions to obliterate - so they become a "no _____". They tend to act as a negative terminal to a positive terminal and thus keep things pinned down. After you've cleaned up a somatic area of all BTs and clusters in it and being it and hidden "behind", have the Pre-OT look for these negative beingnesses.

Some chronic somatics depart very fast and don't return. These are almost miracle in nature. Other chronic somatics gradually lessen and can disappear in the course of the whole Rundown. So don't despair if you don't get an instant alleviation of the chronic somatic but just keep on with the Rundown and don't specialize in chronic somatics. Also be very cheered up when you hit an instant disappearance of one. Both conditions can exist in the same Pre-OT on different chronic somatics.

NED for OTs Series 33

C O N F I D E N T I A L

PERIMETER MASSES

Later on the NED for OTs Rundown you will run into a phenomenon where the Pre-OT has been limiting his attention to masses on or in the body, and not putting his attention out on the perimeter.

The Pre-OT in shifting his wavelength of attention down to the wavelength of BTs and clusters, will end up getting a wavelength shift down to theirs.

ATTRACTION OF ATTENTION

By putting attention on them, you activate them. But this will wind up with the Pre-OT being pulled down to their wavelength. The trick is to put your attention on the outer perimeter, and find something inside it, not put your attention on the something. You try to put your attention on the perimeter and your attention gets pulled into a somatic area - it's BTs and clusters pulling your attention into them.

They are invisible and are trying to get attention. They have an impossible problem of trying to get attention, but can't get attention. Only their mass, or their creating a somatic would get attention. It's almost as if pictures are a trick to get attention. This factor of trying to get attention is why a thetan goes into mass. This is an explanation for life, and why a thetan picks up a body. The reason why acknowledgement works is because an acknowledgement is attention.

This is attraction of attention. You try to put your attention on Point A - it is pulled back to a BT or cluster. It's a contest of trying to put your attention on the actual body, and their magnetic pull of attention onto themselves.

There is also a factor of "negative attention" - they don't want attention on them and knock you unconscious if you put attention on them.

A way to handle is to move such BTs and cluster back to the first time they wanted attention and they blow.

PUTTING ATTENTION OUT TO PERIMETER

Have the Pre-OT put his attention outward to the perimeter, or “look” toward the outer perimeter and the Pre-OT will find something inside the perimeter and you have the Pre-OT blow it off. You will by doing this encounter black mass and you can start quite a mass commotion. Have the Pre-OT look further than the perimeter of the body and he will find masses out there pushing in on the body. Handle these masses with the “What are you?”, ack, “Who are you?” technique and they blow.

Practically all somatics respond this way - the BT or cluster out there is keeping a bone or the body in a state of distortion.

BTs or clusters can turn on a kind of “fluid” which is painful when it touches the body, it’s not that they are in an incident that has that somatic, they exude this “fluid” and when it hits the body it’s painful.

If you lift your attention beam and put it out, they’ll tend to follow your attention beam, and sometimes come halfway out. If the Pre-OT’s body is up against a solid object, the BTs and clusters can get stuck in the object (suck as a chair).

The idea is to have the Pre-OT look out to the perimeter, or past the perimeter and contact masses out there, that are pushing in on the body. blow these off with the “What are you?”, ack, “Who are you?” technique.

It is really remarkable how well this works!

NED for OTs Series 34

C O N F I D E N T I A L

THE SEQUENCE FOR HANDLING A PHYSICAL CONDITION

There is a definite sequence for handling a physical condition. All steps must be done in this sequence to fully handle the condition:

1. The item
2. The body part
3. Illness (of the body part)
4. Cures for illness
5. Protest of cures for the illness
6. The body part(again)
7. The item(again)
8. The period of illness on it (Cluster-making incident)

Step One - The Item

The item producing the physical condition. This could be “dust” as an irritant. Or “poison”, “bad food”, “paint fumes”, etc.

The item is handled by finding and blowing off BTs and clusters who are:

- (a) being the item
- (b) resisting the item

The item will then cease to read.

Step Two - The Body Part

The body part affected by the item. E.g. for the item “dust” the body part was “lungs”. For “poison” or “bad food” the body part could be “stomach”.

On this step you handle BTs being the body part, i.e. being “lungs”. This includes the negative of BTs being “a no body part” such as “no lungs”. And BTs and clusters stuck in and on the body part, or area of the body, or affecting the body part or area. When all such BTs and clusters are handled, the body part will no longer read.

Step Three - Illness

The next action is to handle illnesses of the body part(i.e. BTs and clusters being “sick lungs” or being a condition of an illness or disease or the body part.) “Illness of body part” will cease to read.

Step Four - Cures for Illness

You will now find BTs and clusters being cures for illnesses of the body part. Handle all such BTs and clusters by blowing them off. “Cures for Illness” will then cease to read.

Step Five - Protest of Cures for the Illness

You will now find BTs and clusters protesting cures for the illness. Blow all these off and “Protest of cures for the Illness” will cease to read.

Step Six - Body Part

You will find that the original body part will now be reading again. You handle all BTs and clusters, on or in or being the body part, until they’re all handled and the body part just F/Ns.

Step Seven - Item

Now the original item (from Step One) will be reading again and so you blow off all BTs and clusters on the item. This includes BTs and clusters with engrams on the item, BTs and clusters who have been run on the item when they didn’t have that item (i.e. wrong item for them), and BTs and clusters who copied it. You may even encounter BTs who went Clear, and thought they had engrams on it when they didn’t.

Step Eight - Illness On It

There are periods of time when the person had the physical condition, sometimes years of illness, (which due to mutual shared experience of the illness), made a cluster. This is the period of the illness or physical condition as a cluster-making incident. These are BTs and clusters who were not actually connected with the item, or illness themselves, but were made into a cluster and added on, due to the period of illness which they experienced.

The above are the full steps and sequence for handling a physical condition or

illness. If not done fully or omitted, the condition will recur. So all steps must be fully done in that sequence.

On each step of this sequence the BTs and clusters are handled with the various techniques given for blowing them - the Valence Technique is the most usual and effective method.

The item for Step One is found by asking the PreOT for what caused or produced the condition. It will most likely be the first item given by the PreOT. Be alert for getting into listing or getting an out-list. If so the most likely error is that it was the first item on the list, and this item was invalidated by going past it, or by over-listing past it, or the item was found and audited previously but not fully handled resulting in the item being suppressed or invalidated.

The steps are repeated here in short form for auditor use:

1. The item
2. The body part
3. Illness (of the body part)
4. Cures for Illness
5. Protest of cures for the illness
6. The body part (again)
7. The item (again)
8. The period of illness on it (Cluster-making incident)

NED for OTs Series 35

C O N F I D E N T I A L

NOTES ON PTS

There are BTs who were PTS to successive persons; they went from one person to another, e.g. BT went from Pre-OT's grandfather, to Pre-PT's mother, to Pre-OT. So the Pre-OT now has BTs who were PTS to mother and grandfather. And the Pre-OT was in contact with these BTs when they were on mother, and earlier in the Pre-OT's life when the BTs were on grandfather. This transfer of BTs to successive family members causes a genetic misidentification - it convinces BTs that they are genetic.

There are also BTs who went PTS to a person that they were PTS to in an earlier life or lives. They run into the same person in this lifetime and go into restim.

When a person gets sick there is usually a PTS terminal to be found at the bottom of it. But the PTSness may be that of a BT or cluster which then hits the pc.

Now if you went on listing this BT or cluster you would find one for sure. But it is not the PTS terminal for all of the BTs in the cluster so when you finish you will have indicated the wrong PTS terminal and will have hung the remainder of the cluster with a wrong item which they will then dramatize. So don't list a BT or cluster by L & N. What you do is ask them who or what they are PTS to at which time you will probably get a blow of some of them. Then you indicate to those that didn't blow that it is a wrong item for the rest of them. You will either get the cluster blown with these two steps or the rest of them will blow by other NED for OTs processes.

When running NED for OTs you will sometimes encounter the phenomenon of Pre-OT's attention fixed on or drawn to a remote point, and the Pre-OT can blow off the BT or cluster in that remote location that is drawing his attention. If the remote point is a person the Pre-OT is PTS to, you could expect an amazing change of the remote person where he or she now tries to restore communication with the Pre-OT or ends the conflict or problem. This is the phenomenon of the SP now making things right with the PTS person being handled, and is the same EP as is encountered on the New Vitality Rundown and on PTS-Problems handling when it is done fully to EP. It's not that you are trying to handle PTSness with NED for OTs, but in such an instance as described above you can expect the same EP to occur.

ROCKSLAMS

An R/S means there's an Ev Purp per HCOB 10 Aug 76 ROCKSLAMS, WHAT THEY MEAN. On a Clear or above, any R/S comes from an R/Sing BT or cluster, who has and is dramatizing an Ev Purp. The handling is to locate the BT or cluster and blow it off. An R/S will probably go right down to the basic of a cumulative cluster. You would locate the offending cluster and Date/Locate down to the basic and blow the clusters and BTs off. Clusters can be pretty vicious and you get an R/Ser at the bottom of the cluster. I've even encountered a cluster that made a profession out of killing patients in hospitals - the doctors would wonder why a patient was fine and then all of a sudden take a turn for the worse and die.

Full "NED for OTs" is essential for the terminated handling of R/Ses on a Clear or above.

Very few BTs and clusters are vicious or vengeful, most are benign, but an R/S will go down to the basic incident of a cluster dramatizing or being an Ev Purp. These will usually be wildly out of valence and have horrendous overts and crimes down the track.

To handle R/Ses, you take the statement originally reported to be R/Sing and find the position in the body of the BT or cluster connected with that R/S statement. You'll turn it back on again if you locate the position where that thing was - the R/S will come on. It's a combination of position (in the body) and the statement. Having found the BT or cluster or cumulative cluster who R/Sed, you handle it right on down to fully blown. And handle andy copies. Do this for each R/S statement.

A major case change will occur on blowing off R/Sing BTs and clusters who have been ruining the Pre-OT's life and the lives of those around him.

NED for OTs Series 37

C O N F I D E N T I A L

COLLECTIVE IDENTITIES

By Collective Identity is meant an identity as a plural or generality; e.g. "I'm the army" or "I'm us". There is no personal identity.

Christian Science asserts that "All is mind, infinite mind" - that's a collective identity and will make a BT or cluster being a Christian Scientist very hard to blow.

This is the reason a cluster doesn't blow, a cluster has the wrong item "us", without personal identity. So the technique of "What are you?," "Who are you?" runs into trouble when you get a totally general zealot identity of "I'm the army", or "I'm Christian Scientist", "I'm us", and you don't get a blow. If you keep asking "Who?" you just get a repeat answer "us", and these collective identities won't give a blow.

There's an implant on the track on the subject of "We are all one", "All is one". Someone stuck in this actually goes from the generality of "All is one" and then individuates from that! That's actually the basic definition of individuation (as different from individuality).

A thetan who is "dead" acts like a cluster - there's nobody running the show - and his manifestations are those of a cluster. This is the Socialist, everyone belongs to "The State", individualism is negated, it's all "The People".

TV, Drugs and Socialism are the factors that are bringing about the current deterioration of society, and with these three you can predict a super break up. You get NCG cases, or subtle NCG cases (these make only minor gain), they are a collective mass. The speed of effect of auditing would go up after an Ethics Repair List and Criminality Rundown because on the Criminality Rundown you'll get a "de-mutualization". If you have a TV and Drug culture and enter in a Welfare State you'll get this. In Communism a person is severely punished if he shows any individuality.

There are crime waves after waves which are due to a super association with Death. Then guys have seen so much Death, they consider themselves dead. It isn't that they're taught to kill, it's that by association with Death, they have become "dead" and irresponsible.

Therefore as a rule, while engaging in any collective, social or organizational activity, you have to foster individuality.

The collective identity as an answer from a BT or cluster will not produce a blow, because it is a wrong item.

WRONG ITEMS

You can always get a read on "Wrong item?" because all items are wrong - any name or identity (except "me") is a wrong item.

When you've just corrected a list and you want to make sure you've got the right item, you ask if it's the correct item and it will be. If you then ask if it's and incorrect item, it will read! Because all items (except "me") will read as wrong items. This explains how the What? Who? technique works. You ask "What?" and the answer they give you is the wrong item, you ask "Who?" and they give you the right item ("me") and blow. They go Clear on getting the right item!

REPEATING ANSWER

When you encounter a repeating answer from a BT or cluster on "What?", "Who?" they won't blow, as they keep giving a wrong item. One way to handle would be using the "Yo-heave" technique of resorting to throwing them off physically. That is a "when all else fails".

There is a mechanism which works whereby you can handle the repeating answer. Instead of asking "Who?" again, you ask "What were you before you became that?" - they say "me" - and blow.

BASIC FEAR

There are two fundamental things that all beings have in common.

One is that they are sure they will become worse, go down scale. That is the one thing thetans are really certain of.

The other is there are two things they are afraid they will become (and are certain they will become), cells and molecules.

You will encounter the above in handling BTs and clusters on NED for OTs.

C O N F I D E N T I A L

MORE ON DIANETIC CHAIN ERRORS

BTs and clusters who have been run on Dianetic chains, may have to be taken apart by assessing and handling an L3RF. But you only indicate the line that reads, and must not engage in running engrams. Sometimes there will be three or four different chains all tangled up and you have to sort these out. You can also get a kind of linear chain or “time track” composed of a wrong item that was run and jumped from one BT to another and formed them into a sort of false “linear track”.

Handle the L3RF Method 3, as you will find there are often more than one BT or cluster who have what the L3RF line states, wrong with them.

Another reason for BTs run Dianetically failing to blow, is when they were run on what appeared to be a motivator chain, it was really an overt chain, and when this is straightened out and handled as an overt chain, they blow.

Because you after all are handling several BTs when you handle a cluster, Dianetics may have operated differently on the different BTs in the cluster. Therefore it may be necessary to run the L3RF several times on the same auditing session as they will have different reasons why they got hung up.

You could also do a C/S 53RL on a BT.

NED for OTs Series 40

C O N F I D E N T I A L

AUDITOR ROLE

The auditor is there to help the PreOT blow BTs and clusters. On OT III repairs the PreOT when audited is usually a relay point from the auditor to the BT. On NED for OTs the PreOT is becoming more and more OT and actually does most of the auditing of BTs and clusters. The auditor should only act in the session to keep the PreOT working on blowing BTs and clusters. And should not act in the session when the PreOT is working. Done right this is the easiest auditing there is. Only if the PreOT runs into a difficult BT or cluster does the auditor act and then only as needed to get it sorted out.

The auditor needs to keep a sharp eye on the meter and must be proficient at handling a very loose needle at high Sensitivity, as he will need to do this to get reads, especially later in the Rundown.

During the Rundown F/Ns become more frequent to a point where the needle is F/Ning most of the time, reads and BDs to F/N when the PreOT blows a BT or cluster. As these are often several blows in succession the auditor shouldn't interrupt the PreOT with questions or F/N indications. (It would be impossible to indicate all the F/Ns anyway, especially later in the Rundown.) What's more important is indicating where the charge is, sometimes steering the PreOT by meter read to where the BT is located in the body or sorting out whether it's a single BT, a cluster, a cumulative cluster, etc.

The auditor should inform the PreOT of what is reading and use the meter reads to help PreOT identify and find masses. Never let the PreOT try to answer an unreading question or to look for a BT or cluster that isn't reading. Tell him when the TA is F/Ning or he may overrun. The F/N is unimportant and should not be indicated unless you're running ruds.

C O N F I D E N T I A L

HANDLING BTs MESSED UP ON OT III

On OT III the PreOT is Clear but running engrams, and where he made a mistake on one of these, he'd get messed up. In some instances the rule of "no engram running on a clear" is violated on OT III.

If BTs and clusters who were messed up on running OT III are not repaired, the PreOT on NED for OTs can run into despair, mystery and get into an on and on and on grind on it. This has to be repaired at the beginning of NED for OTs and may have to be returned to later in the Pgm.

Unblown BTs or clusters, or BTs and clusters messed up on OT III, are sometimes at a distance of 6 - 8 - 10 feet out from the body. This is a perimeter you wouldn't normally think to handle. They blew out to this perimeter and stuck there.

Up until now PreOTs on Solo OT III didn't have the data on "earlier Incident I", and "earlier universe" and you will find misses on this which will be picked up by doing an LDN OT IIIRB.

There will also be engram errors made in Solo OT III, which are repaired by assessing an L3RF on the BT or cluster and indicating the reading line.

EXAMPLES OF ERRORS

A BT who had no incident (Inc II or Inc I) and tried to run someone else's;

A BT who tried to run someone else's and didn't run his own;

A BT who thinks he is an Inc I;

A BT who thinks he is an Inc II;

A BT who thinks he is a picture; (some BTs will mock up or become whatever is suggested - hence you get a recurrency of picture due to copying).

A BT who didn't have any engram and tried to run someone else's;

A BT who went Clear and tried to run other people's incidents;

A BT with an earlier Inc I (or Inc Is);

A BT with an earlier universe(s);

The incident was erased and was run more, mocked up by those who didn't have it, and were told to go earlier, resulting in misownership;

A later similar incident mistaken for the same incident;

A wrong indication such as thinking or indicating it's a cluster when it's really a BT - causing it to go black;

BTs or clusters who tried to blow but hung up against other BTs or clusters or ridges or bones.

A cumulative cluster for which the original (basic) incident was never found.

HANDLING

The above are to be handled in Step 4 of the Rundown (HCOB 1 Nov 78, Issue II, NED for OTs Series 27) as additional steps, given below, or at any later point in the Rundown when encountered. A special list has been made up of the above which may be used. The danger of using the list is that you may get several in restim. So if you get a read on the list handle it, and handle the right one.

Addition to Step 4:

Step 4h) LDN OT III RB

Step 4i) "A BT or cluster messed up in running OT III?"

If this reads, locate the BT or cluster and assess the NED for OTs "Repair List for Errors in Running OT III", and find what the error was. And blow the BT or cluster, if he doesn't blow on indication, by completing the OT III action. Also NED for OTs techniques may be used if this does not seem to resolve it.

After handling many of these you will get a sudden series of blows as the barrier holding them has been removed.

C O N F I D E N T I A L

REPAIR LIST FOR ERRORS IN OT III

This list is used to repair and blow BTs or clusters messed up in running OT III. The danger of using this list is that you may get several in restim. So if you get a read on the list handle it, and handle the right one.

I N S T R U C T I O N S

- A. "A BT or cluster messed up in running OT III?" (If this reads do B below. If no read, check "Suppressed?" and "Invalidated?")
- B. Pre-OT finds the BT or cluster by position in, on or around (outside) the body. (Same BT or cluster that read in A above and same meter read.)
- C. Assess down this list with Pre-OT's attention on that BT or cluster, until you get a read, and indicate the reading line.
- D. If no blow on indication, complete the OT III action, to blow of the BT or cluster.
- E. If no blow on D above, or you can't complete the OT III action on that same BT or cluster, continue to assess down this Repair List to next reading line, as there could have been more than one error. Handle per Steps C and D. (NB: You should check "Suppressed?" and "Invalidated?" on "Earlier Inc I" and "Earlier Universe?" if no read on either.)
- F. When BT or cluster blown, return to Step A and handle per Steps B - E. Repeat this sequence A - E until Step A no longer reads and just F/Ns on the question.

CAUTIONS

After handling a BT or cluster do not recheck or repeat the Repair list line, as doing so would invalidate the fact that you have handled it, and would restimulate others, cause others to mock up (copy) what was just handled. Only question A is rechecked.

Be sure to handle fully to blow the same BT or cluster you started with, and do not restimulate others, or jump from one BT or cluster to another.

You could use other NED for OTs techniques, (such as “What? Who?” or “Jolting the BT a bit earlier”), if the above Steps A - E do not resolve it. You will find that most blow either on indication of the error or on completing the OT III action. “Earlier Inc I” (sometimes several earlier) or “Earlier Universe” most commonly are the reason and produce blows.

REPAIR LIST FOR ERRORS IN RUNNING OT III

1. AN EARLIER INC I? _____
2. AN EARLIER UNIVERSE? _____
3. A BT WHO HAD NO INCIDENT II AND TRIED TO RUN SOMEONE ELSE’S? _____
4. A BT WHO HAD NO INCIDENT I AND TRIED TO RUN SOMEONE ELSE’S? _____
5. A BT WHO TRIED TO RUN SOMEONE ELSE’S AND DIDN’T RUN HIS OWN? _____
6. A BT WHO THINKS HE IS AN INC I? _____
7. A BT WHO THINKS HE IS AN INC II? _____
8. A BT WHO THINKS HE IS A PICTURE? _____
9. A BT WHO DIDN’T HAVE ANY ENGRAM AND TRIED TO RUN SOMEONE ELSE’S? _____
10. A BT WHO WENT CLEAR AND TRIED TO RUN OTHER PEOPLE’S INCIDENTS? _____
11. THE INCIDENTS WAS ERASED AND WAS RUN MORE AND MOCKED UP BY THOSE WHO DIDN’T HAVE IT? _____
12. THE INCIDENT WAS ERASED AND TOLD TO GO EARLIER WHEN THERE WAS NONE? _____
13. MISOWNERSHIP OF INCIDENT? _____
14. A LATER SIMILAR INCIDENT MISTAKEN FOR THE SAME INCIDENT? _____

15. SOMETHING LATER MISTAKEN FOR SOMETHING EARLIER _____
16. DIDN'T GO BACK FAR ENOUGH AND JUST MOCKED IT UP TO RUN? _____
17. DIDN'T GET THE RIGHT INCIDENT? _____
18. STUCK IN AN IMAGINED INCIDENT OR PICTURE? _____
19. DELUSION? _____
20. SAW SOMEBODY ELSE'S INCIDENT OR PICTURE AND DIDN'T RUN HIS OWN? _____
21. NEVER RAN HIS OWN INC II? _____
22. NEVER RAN HIS OWN INC I? _____
23. NEVER HAD AN INC II? _____
24. NEVER HAD AN INC I? _____
25. INTERRUPTED WHILE RUNNING INC II? _____
26. INTERRUPTED WHILE RUNNING INC I? _____
27. DIDN'T ERASE THE INCIDENT AND STILL TRYING TO RUN IT? _____
28. AN UNRUN INC II THAT WAS IN RESTIM? _____
29. AN UNRUN INC I THAT WAS IN RESTIM? _____
30. DIDN'T HAVE AN INC I, AND INC II DIDN'T ERASE BECAUSE INC II HAS AN EARLIER SIMILAR INCIDENT _____
31. JUST WATCHED OTHERS RUN INC I AND INC II AND DIDN'T RUN OWN? _____
32. WENT CLEAR AND TRIED TO RUN OTHERS' INCIDENTS? _____
33. JUMPED BTs? _____
34. INCIDENT II WAS LEFT UNFLAT? _____
35. INCIDENT I WAS LEFT UNFLAT? _____
36. INCIDENT II WASN'T RUN? _____
37. INCIDENT I WASN'T RUN? _____

38. A WRONG INDICATION OF THINKING OR INDICATING IT'S A CLUSTER WHEN IT'S REALLY A BT? _____
39. A WRONG INDICATION OF THINKING OR INDICATING IT'S A BT WHEN IT'S REALLY A CLUSTER? _____
40. SOME OTHER WRONG INDICATION? _____
41. TOLD SOMETHING DIDN'T READ? _____
42. A BT OR CLUSTER WHO TRIED TO BLOW BUT HIT A BONE AND STUCK? _____
43. A BT OR CLUSTER WHO TRIED TO BLOW BUT HIT A RIDGE AND STUCK? _____
44. A BT OR CLUSTER WHO TRIED TO BLOW BUT HIT AN UNHANDLED BT OR CLUSTER? _____
45. NO PLACE TO GO? _____
46. CAN'T GO? _____
47. MUST GO? _____
48. A CUMULATIVE CLUSTER FOR WHICH THE ORIGINAL (BASIC) INCIDENT WAS NEVER FOUND? _____
49. AN EARLIER INC I SUPPRESSED? _____
50. AN EARLIER INCIDENT I INVALIDATED _____
51. EARLIER UNIVERSE SUPPRESSED? _____
52. EARLIER UNIVERSE INVALIDATED? _____
53. RAN INTO AN IMPLANT THAT SAID THERE WAS MORE EARLIER UNIVERSES THAN THERE WERE? _____
54. A BT OR CLUSTER WITH A WRONG ITEM OR OUT-LIST? (L4BRA) _____
55. A BT OR CLUSTER WITH SOMETHING ELSE WRONG? (C/S 53 on that BT or cluster.) _____

NED for OTs Series 27
Ref: NED for OTs Series 41,42

Step 4 of the NED for OTs Rundown (Series 27) is subdivided into 9 actions (4A, 4B, 4C, 4D, 4E, 4F, 4G, 4H, 4I). The instruction to check interest only applies to Step 4F, (Repair of Past Auditing). All the other steps, (4A - 4E, 4F - 4I) are done without checking interest.

The usual rules of not running anything that doesn't read, and checking for false read or protest if the pc is not interested or protesty, apply to all steps.

ADDITIONAL ACTION

After running or handling any category, one should check whether this acted as a wrong item (or wrong indication) to other BTs to whom it did not apply, but only if there seems to be trouble.

Example 1: Auditor completes handling "BTs who went Clear and were audited on engrams". Auditor can then check "Did 'went Clear and then audited on engrams', act as a wrong item for other BTs to whom it did not apply?" and if reading indicates this was a wrong item to the others.

Example 2: Auditor completes handling "BTs audited past erasure". Then auditor can check "Did 'audited past erasure' act as a wrong item to other BTs?" And if reading, indicate.

If discomfort or lack of GIs seems to indicate trouble has occurred be sure to check if it has acted as a wrong item, however you can also use the Repair List (NED for OTs Series 24).

This phenomenon of other BTs taking on a wrong item by copying what is run on other BTs tends to happen on any category or button being run. It happens to a far greater degree if an Overrun occurs, i.e. one goes on trying to handle the same category or button after it has been handled, and starts in on a new area of the body or new category using the same category or button that has just been handled.

Sometimes when using a category or button, a series of automatic blows will occur, you will get a floating TA, and this is the EP for that action and the EP for the session. Hence the rule of short sessioning on NED for OTs and ending off on a floating TA.

WRONG ITEMS

(Refer HCOB 19 Nov 79)

The reason why a wrong item (L & N error) produces such a violent reaction is because it can key-in practically every BT in the body.

They're all sitting on a wrong item already - what they are being - and if you find a wrong item on an L & N list, it can give them all another wrong item on top of the wrong item each is being.

The L & N error is a wrong item for a very large number of BTs, hence the very heavy and violent reaction.

PARTIALLY BLOWN BTs

(Ref: NED for OTs Series 16)

In HCOB 17 Sep 78, Issue II, NED for OTs Series 16, the phenomenon of partially blown BTs causing "Exterior visio" is described and the handling is given.

In addition to sometimes causing an apparency of exterior perception, partially blown BTs can cause a physical reaction of discomfort. Not having fully blown they react back against the body with energy or mass.

The reason why they only partially blow is because they are still mixed up in a mass with untouched, unaudited BTs that stick them. By having the Pre-OT reach out in front of the partially blown BTs with a question "Who are you?", the uncleared BT or BTs get handled. This may have to be repeated as the group of BTs may blow further out and hang up again. Simply keep putting the question "Who are you?" out in front of the BTs each time they hang up until they blow apart and clear fully and completely.

It is interesting that the mass sometimes flies apart like sparks way out there. It is at that moment the Pre-OT experiences a feeling of relaxation.

C O N F I D E N T I A L

BTs WITH MISUNDERSTOOD WORDS

I have discovered that BTs can have misunderstood words too!

The body's ear might hear one thing and the BT might hear something else entirely, direct. This results in Mis-U sounds and oral words. The BTs don't know what the person is saying, nor do they know what is being said to the person, due to these Mis-U's. And the person gets caught in the middle of this flow channel, experiencing the reaction to the BT's Mis-U. The usual reaction of the BTs is just to withdraw.

BTs can get Mis-U's from reading matter, foreign languages, and I have found BTs that don't speak English. Where it really goes wild is in auditing, where the BT has a Mis-U on the auditing command or question. They would then answer the auditing question wrong to themselves, causing a case hang up right there.

There is also a basic consideration that the Dead would not understand anything anyway.

This phenomenon of BT's Mis-U's explains why some try to communicate with pictures.

Since this can cause a case to hang fire in auditing you need to know about this and to check for a Mis-U in the auditing command or question, remembering that it could be a BT's Mis-U and not necessarily the Pre-OT's Mis-U. So auditors and C/Ses are alerted to this as a possible reason for a case to hang fire. The remedy is to repair the situation, by checking for Mis-U's in the commands or auditing questions, and handling BTs hung up in these.

As a rundown you would take these up by categories and fully handle them as follows. But this as a rundown comes later on in NED for OTs.

1. Clear with the Pre-OT the idea of communicating with BTs by concept, not with words. The Pre-OT may have to learn this trick of communicating conceptually. Clear the words "concept", "idea", "thought", "spoken words", "written words", "picture". Then clear the idea of communicating conceptually. You may have to do a little drill with the person by getting him/her to think a simple thought, such as "It's a nice day", without verbalizing it or thinking in words or pictures. You could have the person think the thought conceptually, then think it with words, then conceptually, then with words.

Or even think the thought while saying different words or gobble-dy-gook. Don't overdo this, it is just to get the Pre-OT to a point where he can communicate to a BT conceptually.

2. Assess through these categories until you get a read:

“A BT with a Mis-U.....

in auditing commands?

in auditing questions?

in spoken words?

in reading matter?

in entertainment?

in study?

in English?

in foreign languages?

symbol?

sound?

3. Have the Pre-OT locate where the BT is in relationship to the body.
4. Blow the BT by usual NED for OTs techniques (What? Who?), remembering that the Pre-OT must ask these questions (and receive the answers to them) conceptually, so as to avoid Mis-U words in this communication.
5. Check for any other BT within this category and handle as above, until there are no more BTs with Mis-U's in this category.
6. Continue down the assessment in #2 above until you get a read and handle as above, and so on.
7. When you have completed the categories given above, make a final check for any other BT with a Mis-U, and handle before leaving this Rundown.

This discovery shows the importance of clearing words used in auditing questions and commands, and the importance of clearing Mis-U words in general. And of course the fact that these Mis-U's may be a BT's Mis-U's rather than the person's own Mis-U's, will dispel any mystery about why one can run into Mis-U word phenomena when one knows the word himself. But don't let this make you any less alert for words the Pre-OT may have misunderstood in auditing questions or commands, and be sure to clear these.

These BTs with Mis-U's are easily handled by use of the trick of communicating with them conceptually, rather than with words.

VALENCE TECHNIQUE ADDITION

References:

HCOB 17 SEP 78 I	NOTs Series 7, VALENCES
HCOB 19 NOV 78	L & N LISTS - THE ITEM "ME"
HCOB 9 FEB 79 II	NOTs Series 44, WRONG ITEMS
HCOB 1 AUG 68	THE LAWS OF LISTING AND NULLING
HCOB 17 MAR 74	TWC, USING WRONG QUESTIONS
HCOB 11 APR 77	LIST ERRORS, CORRECTION OF

LISTING FOR THE ITEM

(Warning: All HCOBs and material on Listing Errors
apply to this procedure.)

Step One of the NOTs Valence Technique, "What are you?", is a listing question. It is asked to find the valence the BT or cluster is stuck in (obsessively being), thereby shifting the BT or cluster out of that valence.

Sometimes a BT or cluster will answer at first with a wrong item or items. Then there won't be any valence shift, nor will there be any blow. Finding the correct item (the valence the BT or cluster is obsessively being), will shift the BT or cluster out of that valence, and remaining steps of acknowledging the item, and asking "Who are you?" will produce the cognition: "I'm me", and it will blow.

The correct item in answer to the question: "What are you?" will read. If there is no read on the first item, one has to list from the BT or cluster to get a reading item. It is often a 6 or 10 item list (but could be shorter, including the first item on the list). The following examples are given to show what such a list could look like. The items in these examples and the size of reads shown, are not for reference but are purely by way of illustration.

Example 1:

“ What are you?”

A leaf
A tree
A tree trunk
A branch
A twig
A broken limb LF - F/N (The item)

Example 2:

“ What are you?”

A sword
An arena
A crowd
A wild animal
A lion
Dust
Blood
A dying man
A gladiator F - F/N (The item)

Example 3:

“ What are you?”

A brain LFBD - F/N (The item)

Example 4:

“ What are you?”

There is no answer from the BT
or cluster.

The technique used here is to run
“Hello and Okay” (See HCOB 17 SEP 78
Issue I NOTs Series 7, page 4) on the
BT or cluster.

When it is answering up, then proceed
as above in other examples. (Note:
BTs or clusters occasionally blow on
“Hello and Okay”.)

AFTER GETTING THE ITEM, ALWAYS ACKNOWLEDGE IT.

Sometimes it is necessary to acknowledge the item in order to get an F/N, sometimes the acknowledgement broadens the F/N, but the acknowledgement step must not be omitted.

RELAY OF COMMANDS AND ANSWERS

The auditor has to indoctrinate the PreOT to relay the auditing question to the BT or cluster, and to relay the answer from the BT or cluster to the auditor. (Otherwise the auditor wouldn't know what item the BT gave in answer to “What are you?”, nor would the auditor know whether it was a reading item.) The auditor is responsible for the communication in the session and for control of the session.

VALENCE LISTING TECHNIQUE STEPS

1. “ Where is the BT (or cluster)? “

The auditor has the PreOT locate where the BT or cluster is by position in relation to the body. The auditor notes the area named by the PreOT and whether it reads. Do not let the PreOT go looking for additional new areas until the reading area is fully handled.

2. “ What are you? “

The auditor has the PreOT ask the BT or cluster the question, and relay the answer(s) to the auditor. The auditor writes these down and notes any read. If the first item does not read the auditor has the PreOT continue to ask the question and relay the items to the auditor, until there is a reading item, and must not go past it.

3. Acknowledgement

The PreOT acknowledges it.

4. “ Who are you? “

The PreOT asks the BT “Who are you?”, it cognites “I’m me” and blows.

(But if there is no blow, or if there are BTs, at once suspect that a wrong item was found, and correct it to the right item. Complete the steps to a blow.)

WARNING

There is a danger here of finding a wrong item, underlisting or overlisting. Wrong items and list errors recoil heavily on a case. BTs and clusters in their lowered awareness are very susceptible to suggestion, and tend to copy obsessively. Thus it is very essential that one does not leave any BT or cluster with a wrong item or out-list.

Auditors and C/Ses are alerted to watch for any sudden decline of the case when this listing action has been done, and to at once suspect and handle any out-list/wrong item.

Despite the danger of listing errors, it will be necessary to use this technique of listing for the item, at some point on any case being audited on NED for OTs, since BTs and clusters often begin by giving wrong items in answer to the question: “What are you?”. However, a good auditor can be trained to L & N successfully and get the right item. The indicators of a wrong item (see Laws of L & N) are very obvious, both to the auditor and C/S, and bring about a dramatic case resurgence when spotted and corrected.

HANDLING A WRONG ITEM

Immediately when the PreOTs GIs go out or BIs appear in the session the auditor must check for “A wrong item?”, “An out-list?”, and handle. Find where the BT or cluster with the wrong item or out-list is by position in relation to the body, and find and correct the wrong item/out-list on that BT or cluster. After locating and indicating the wrong item or list BPC, always follow through and find the right item, and continue the steps of the Valence Technique until the BT or cluster blows. There may be more than one BT or cluster with a wrong item or out-list, so it is essential to locate the BT or cluster by position in relation to the body.

After handling the BT or cluster to a blow, check your original question (“Wrong item?”, “List error?”) again to ensure there are no more BTs or clusters with a wrong item. Don’t go on trying to repair wrong items when the question “Wrong item?” ceases to read or F/Ns, or you will start messing up BTs and clusters who did not have that wrong with them.

If difficulty is encountered in repairing a list error, it could be sitting on an earlier out-list or wrong item on that BT or cluster.

An L4BRA can be used to repair a wrong item or out-list on a BT or cluster, but if so the list must be used Method 3, and care used to find the BT or cluster by position, and to handle each BT or cluster encountered to blow.

POSSIBLE ERRORS

Errors that could possibly be made and could be anticipated on this technique are:

- (a) The auditor missing the read on the first item and causing overlisting,
- (b) Listing past the first reading item (overlisting),
- (c) Leaving a BT or cluster with a wrong item,
- (d) Leaving a BT or cluster not blown or only partially blown,
- (e) Going past an F/N on listing (bypassing the item),
- (f) Leaving the list incomplete,
- (g) Jumping from one BT or cluster to another without completing the first one started,
- (h) Overworking the question "Wrong item?" and trying to repair other BTs who didn't have that wrong with them.

(Remember that all items are wrong to some degree, as the only really right item is "Me".)

These possible errors could even be assessed if need be.

OK TO AUDIT OR C/S

It is called to attention that the March 66 HCO PLs on High Crime Policy apply to this issue and its references, which must be High Crimed by any auditor or C/S before using them.

FLUB, CRAM, RETREAD SYSTEM

The materials of L & N are covered on Class IV, so there is no excuse for an auditor to flub L & N, nor to be ignorant of the Laws of L & N.

The Flub, Cram, Retread System means that on the first auditor flub he goes to Cramming on the materials flubbed, one more flub on these materials and he goes to Retread. It is a system put in at Flag to ensure that there were no failures on FCCIs with new internes auditing in the HGC. It is a proven workable system. It is imperative, mandatory, that the Flub, Cram, Retread System be used on this listing technique on NED for OTs, and no C/S, Cramming Officer, nor Tech/Qual executive may get reasonable about this, nor allow any persuasion or pressure to undermine or counter this system.

Despite the liability to the pc if flubbed, actions such as L & N, L & N Repair, and Dating/ Locating, are actually easy to do correctly, produce spectacular results when done right, and are sometimes necessary auditing techniques. So don't get reasonable about demanding that these actions be done correctly. Their success depends on the auditor's TRs, metering, no misunderstands and thorough grasp of the materials.

IT IS THEREFORE MADE A COMM EV OFFENCE NOT TO USE THE FLUB, CRAM, RETREAD SYSTEM ON THIS NOTs LISTING TECHNIQUE, AND IT IS ALSO COMM EV-ABLE TO DECRY OR COUNTER THIS SYSTEM.

Should an auditor flub again after Retread he or she goes to full Retrain from the bottom up per C/S Series 84.

Most auditors are keen to audit well, and learn their materials and produce miracles as a matter of course. If they do not, then their MUs, False Data must be cleaned up, and the materials thoroughly restudied so that they will get the expected excellent results from standard application of the Tech.

Another factor on flubby auditors is that sometimes an auditor (or C/S) will dramatize the same out-tech on pcs that exists on his/her own case. Therefore the attention of the C/S or Senior C/S is called to this point, and the case of a flubbing Tech/Qual person should be checked for out-tech and if there is any get it corrected in addition to the Cramming or Retread action. (Lest this paragraph be misconstrued it does not change policy in any way, and "case on post" is not an extenuating circumstance in any Justice action, nor may it be used as an excuse for any failure to know and apply the Tech; besides, to plead "case" as an excuse would be beneath contempt for any professional auditor, C/S, supervisor, etc.)

Then in addition to cleaning up any out-tech found on that person's case, handle the auditor and C/S who flubbed and didn't handle it, too.

If despite the above handlings the same person persists in repeating the same errors, then you are up against a case situation described in HCOB 8 MAR 62 THE BAD "AUDITOR", and HCOB 15 MAR 62 SUPPRESSORS, and such a person must be removed from Tech/Qual lines for the sake of others. This label should not be assigned lightly, and the supervisors of such a student and their seniors must be named as Interested Parties to the Comm Ev which would look into WIAC PL outnesses, graduating an overt product, failure to use Study Tech and Student Corrective Actions.

SUMMARY

Very often, especially early on the NOTs program, BTs and clusters will blow on inspection, or on finding where the BT or cluster is, or before the steps of the Valence Technique have been done. One must not seek to carry on auditing a BT after it has blown, as this would result in other BTs and clusters copying and misidentifying themselves with the blown BT.

Many BTs blow very easily. Sometimes after handling one BT or cluster, you will get a series of easy rapid blows, or even a repetitive or automatic blow. These points are covered in earlier NED for OTs issues, and are not changed by anything in this issue.

This refinement in the Valence Technique will enable you to handle and blow BTs and clusters with more accuracy and rapidity. And there are some BTs that wouldn't have blown otherwise, that this listing step will handle.

ACKNOWLEDGING THE "ME" ANSWER

(Ref: NOTs Series 7, VALENCES
NOTs Series 47, VALENCE TECHNIQUE
ADDITION)

The HCOB gives an additional step to the NOTs Valence Technique, and a further clarification of each of the steps of this technique.

The new step consists of "acknowledging the "me" answer". Doing so can guarantee a blow.

A lot of the time there is nothing there to acknowledge because it has already blown. Most of the time this isn't needed, but when used it does prevent a hang-up when the BT hasn't gone. So its actual value is the fact that it can guarantee a blow.

(By the way, you can call one back and acknowledge it, but don't get into that. This is mentioned simply because it is possible to call them back.)

THE FULL STEPS OF THE VALENCE TECHNIQUE

0. Identifying what you are going to handle.

Although this is strictly speaking not part of the Valence Technique, one has to start

off by finding a BT or cluster that you are going to blow with the NOTs Valence Technique. This zero step then consists of whatever action one is on, such as Rudiments, a NOTs Program Step, Repair List or whatever, that uncovers a reading charge that one identifies as a BT or cluster. Having found a reading charge one has to identify what that charge is coming from, i.e. a BT or a cluster (and less commonly, “a BT that thinks it’s a cluster”, or “a cluster that thinks it’s a BT”).

This step varies depending on what Program step or category you are working on. E.g. on Program Step #17, “Mass Mistaken For the Mass of the Body”, you ask the Pre-OT to “Look over the body and tell me if there is any mass.” or “...any massy body part or area?”, or “...any area of the body that is solid?”. When you get a reading area of mass, you then need to identify what this is, i.e. “Is it a BT?”, “Is it a cluster?”.

On Step #18, “BTs Being Body Parts”, you have the Pre-OT look over the various parts of the body until you get a reading body part. Or, you call off various parts, i.e. “Head?”, “Face?”, “Neck?”, “Inside?”, “Outside?”, etc. until you get a read. In this instance you have the position or area of the body where the BT or cluster is, but still need to identify it by asking: a BT?, a Cluster? (But note that in this instance as in the paragraph above, you have also found where the BT or Cluster is in relation to the body).

But if you are flying ruds, or handling a prepared list, to start with all you have is a reading question. You then find whose charge it is, (per HCOB 20 Dec 79 AUDITING SOMEBODY UNDER CONSTANT AND CONTINUOUS PT STRESS and HCOB 22 Dec 79 FLYING RUDS AT OT III AND ABOVE) by asking: “Is it yours?”, “a BT’s?”, “a cluster’s?” or , “Is it also _____’s?”. This action identifies what you have found and are now going to handle.

This is really a preliminary step to the Valence Technique in which you are (a) finding something to run, and (b) identifying what you have found. You are establishing whether it is “a BT”, “a cluster”, maybe “several BTs”, or even “more than one cluster”, (in the case of a plural, the Pre-OT would need to be told to limit his attention to one of these, so you can handle one at a time.)

Having found a charge and identified what it is, you now can move into the Valence Technique to blow that BT or cluster (unless it has already blown by this point, which is quite often so, many blow by inspection, especially if the Pre-OT is running cleanly and rapidly).

1. “Where is the BT (or cluster)?”

The auditor has the Pre-OT locate where the BT or cluster is by position in relation to the body. The auditor notes the area named by the Pre-OT and whether it reads. When the Pre-OT names the correct place it will read. Do not let the Pre-OT go on looking for additional new areas until the reading area is fully handled.

(As noted above under Step 0, you may have already located where the BT is, in which case you wouldn’t then ask the Pre-OT to find where it is.)

The location of a BT or cluster is not always in the body, they can also be on the body, outside the body, even at some distance from the body.

Steps 0 and 1 are not rote. These steps are done to then enable the Pre-OT to limit

his attention span to the specific BT or cluster while asking the auditing question. Otherwise you could jump from BT to BT, restimulating other areas than that being worked on.

2. “What are you?”

(Note that any and all listing done follows the HCOB 1 Aug 68 THE LAWS OF LISTING AND NULLING. These have not changed just because they are being used in a different process. An auditor who does not know these should not attempt this step, and should master this HCOB before attempting this step.)

The auditor has the Pre-OT ask the BT or cluster the question, and relay the answer to the auditor, who writes the answer down and notes whether it read. Only if the first item does not read, do you list further items. Very often the first answer reads and that is the item.

If the first item did not read, you’ve now got to ask him for another answer, and you have got to make sure that it comes from that exact spot or area. You have got to make sure that he isn’t shifting his attention all over his “left side”, or you’d get the whole bank in that area alive. You could say: “Now, from that same spot, is there another answer? another? another?”. And this is done only to the first reading item. You might have to verify it: “Is that (answer) from the same spot?”.

This is why you establish where the BT or cluster is located in Step 1, as you can then ensure that the Pre-OT limits his attention to, and directs the auditing question to, that exact spot. E.g. “Put your attention on the top of your left ear and ask “What are you?”

The auditor indicates the first reading item. (Don’t forget that the PreOT can’t see the meter, and the auditor must say what read, and must not let the Pre-OT overlist.) You indicate the item by saying “Pc wording of the first reading item”) is the item”. Don’t get sloppy and say “That’s the item”, as how does he know what you mean by “that”? If “catfish” was the item say, “Catfish is the item”.

Normally, but not always, you will get an F/N on finding and indicating the item, but if you do not get an F/N here, you will on the next step.

(Warning: On this step remember that you may have already received the answer in Step 0 or Step 1. BTs and clusters may not be aware of the fact that they are living beings and may not release any charge at all on “BT” or “cluster”. But when you ask where they are, you may have gotten an answer to what they are being, simply by asking for body locations. This is not common, but not uncommon either: you asked if the BT was on his foot and you got a big read. In this What step you might have trouble getting a reading item and might miss the fact that you already had the reading item for his What step in “foot”. The BT was being a foot and you discovered it by accident without recognizing it, so if you have any trouble with the What step, one of the first things to check is whether or not a “What” already read on asking for the “Where” on Step 0 or Step 1. If you suspect this, put the named body part that read on the list and check it out as part of the list. You won’t have to do this often, but you better know about it.)

3. Acknowledgement

The auditor has the Pre-OT acknowledge the item. This is very important (see

NOTs Series 7).

Even if you got an F/N on the previous step, you still acknowledge and you will broaden the F/N. And if you didn't get an F/N previously, you will on acknowledging the item. And you'll quite often get a blow on this step.

4. "Who are you?"

Now we have to remember that it is the same spot again and we ask, "Who are you?", and we don't feed them the answer. They sometimes comm lag (don't get impatient with the comm lag), sometimes it's a few seconds comm lag, and then you get the answer. You may have to repeat the question. The "Me" answer will normally LFBD, and if that LFBD isn't very marked, you make sure you do the next step of acknowledging the "Me" answer. In any event you could still acknowledge, but if the LFBD was pronounced the probability is that he's gone.

Now there is a special condition you can run into on the "Who are you?" question if the BT answers with a significance or identity answer. This is covered in NOTs Series 7. But if this continues, suspect that you may have gotten a wrong item on the "What are you?" question, or that the Pre-OT has used too broad an attention span or let his attention wander to other areas and he is getting answers from other BTs or Clusters.

5. Acknowledgement

The auditor has the PreOT acknowledge the BT's "Me" answer. This action can guarantee a blow.

Now if this acknowledgement produces another read then we know it guaranteed a blow. Sometimes you get another LFBD on the acknowledgement step, and sometimes you get a broadening of the F/N.

And that completes the steps of the NOTs Valence Technique.

CAUTIONS

Sometimes, quite often in fact, this short-circuits. You ask: "What are you?" and the guy says "Me" and blows. And sometimes you are patiently trying to go through all these steps and you get a series of blows. A blow or a series of blows can occur at any time during NOTs. You don't then continue the steps of this Technique, as that BT or cluster has gone! Sometimes a series of blows or an automatic blow will go into a Persistent F/N or a Floating Tone Arm and in either instance you would end off the session.

Also you can get repetitive blows if a case is running pretty clean, and you can get blows without BDs. There isn't much left on the charge and it isn't registering on the meter to amount to anything.

There is also the case of a "partial blow" and the description and handling for this is given in NOTs Series 45, HCOB 10 Feb 79 PARTIALLY BLOWN BTS.

On "Hello and OK" you sometimes get a blow. The BT or cluster doesn't answer up and you run "Hellos and OKs" repetitively to get it into comm. Rarely, it will suddenly

blow, and it would then be senseless to go on trying to run “Hello and OK” or anything else, as that one has gone.

Some auditors have been known to ask a pc if it blew, during the Valence Technique steps. Even nag the PreOT, “Did it blow?”, “Has it gone?”, “Still around?”. This could be due to the auditor’s unfamiliarity with his meter, and not recognizing a blow when he sees it occur on the meter. Or, possibly some may have confused another technique, Date/Locate, with this technique. You of course always Date to blow, and Locate to blow, and the auditor could get the idea that he should carry over Date/Locate technique into the Valence Technique.

It is very poor practice to ask the PreOT if it blew during NOTs Valence Technique. You could cause the BT or cluster to submerge or be suppressed, or you could invalidate a blow that did occur.

This doesn’t mean that you can’t ever ask if it blew. You could ask if it is “still around?” and a read would confirm that it is. But this type of question is asking for a missingness. It’s no longer there. There’s a large number of pcs that never see the blow, and it isn’t something to see, because it’s a missingness. This type of question can be difficult for the PreOT to answer, as there is now nothing there for him to perceive as it has gone. If the meter BD’d and F/Ned on the “Me” step, it would be idiocy to then ask if it blew, of course it did! But if your meter didn’t tell you it blew, you could be in a quandary and have to solve that problem. But you wouldn’t interrupt the Valence Technique to ask if it blew, and you wouldn’t get into nagging the PreOT. You just follow on through your steps, and particularly if you had the PreOT ask the “Me” answer, then you got your blow alright. So this concern about whether the BT blew is misplaced.

These points are stated so that the auditor will understand what he is doing, why he is doing it, and what manifestation he can expect to occur, because these manifestations will occur. This technique is a very positive series of steps, and they go in that sequence. If these steps are done as given, you will get the result, and if departed from or if there is an error, you can definitely expect to get that manifestation too, i.e. too broad an attention span and you will get restim.

It is necessary that the auditor and C/S understand these points as this is not a technique that can be done rotely or robotically.

OT III TECHNIQUES

Sometimes you will need to use OT III techniques, especially when you run into a cluster. And it is effective, just like it always was. You sometimes get into a situation where you have an inert mass. You run some “Hellos and OKs” and it actually becomes less inert, but it is still a cluster. That condition can exist but it usually isn’t untied with “Hello & OK”. It’s a cluster and it reads on cluster. Then it’s your assessment for mutual incident, “Accident?, Illness?, Impact?, Injury?, etc.”, you do the assessment of what is this thing. You get your mutual incident. Sometimes the cluster will explode apart or break up on the assessment alone. You found what was holding it together. Then you wouldn’t try to Date/Locate it. You’d have the PreOT pick off individuals and run them on the Valence Technique. But if there was no disintegration of the cluster on finding the mutual incident, you’d carry right on and Date/Locate, Inc II and Inc Is (or NOTs Valence Technique).

Now there's a variation on mutual incidents. You can get a mutual incident that is current, contemporary, like he went PTS or something. Had a big ARC break or something. But it isn't as strenuous as a cluster-making incident. It's a sort of a lock. It isn't a mutual incident like an impact, injury, illness, accident, shock, etc. But a guy can run into a recent heavy upset or general charge of some kind, heavy stress, and you get the reaction described in HCOB 20 Dec 79 NOTs Series 48, under "Routine A". There you had a general total restim - it is actually a mutual incident as it happened to all of them - it's near PT though and they all copy it, and when you hit it you get a sudden BD and a relief. But you are not going to blow any BTs to amount to anything as it isn't a cluster-making incident. So you have to be able to differentiate between these two types of mutual incidents, the recent this life lock, and the heavy impact, injury, explosion type of mutual incident that forms a cluster. The cluster will resolve with the OT III, mutual incident, Date/Locate, Inc II and Inc Is routine. And that's why you start off on the NOTs course with a re-study and clear up any MUs on the OT III materials. I wouldn't do much date/locating on NOTs, and usually the cluster will break up into individuals on finding the mutual incident pinning them together. Very often you can blow a cluster with the NOTs Valence Technique, but you still have the assessment for what is holding the cluster together, and it is very useful.

The one that gives the most trouble is the cluster impacted with a cluster, impacted with a cluster - a Cumulative Cluster. You also have the handling for that in HCOB 25 Oct 69R CLUSTER FORMATION, CUMULATIVE. But some of these clusters can be pretty horrifying in character. I don't think this would give any trouble in NOTs though, and I think by the time he's gotten through OT III, handled all the individuals and available BTs and clusters he's got, that he may have blown these by then.

Regarding the insane, the probability is that a cluster is really dominated by one thetan who has "contaged" the rest of the cluster with some wild ideas - evil intentions. That's when you run into the R/Ser on NOTs. And you may get the intention come off, if so note it in the worksheets. I wouldn't do more with it than that. You're taking the cluster down to basic mutual incident and blowing it, so then it is gone anyway. But you may have to get off the evil intention if it doesn't just come flying off. The cluster could be held together by a mutual idea or evil intention received during an implant or heavy engram. In one instance an R/Sing cluster was listed for its evil intention, which successfully blew the cluster apart, and this could be done, but usually won't have to be resorted to. More commonly when handling a cluster, an R/Sing cluster, you can run into the phenomenon of evil intentions coming off voluntarily, and you will see a list starting up in the worksheets. This is called to your attention, so that you will recognize it if it occurs and take the list to its BD F/N item. That can happen, and an auditor should be able to recognize when a pc is listing and handle it as a list. XDN actually applies. The bulk of Rock Slammers are probably clusters, and probably it's one main BT in the cluster affecting the rest by wishing off his evil intention on them.

COPIES

Handling copies can be necessary, especially when you've taken apart a cluster. Or when you don't get a clean blow and suspect that some other BT is copying what you just ran or handled. But checking for copies can be easily over-worked, and as BTs are very suggestible, you could by nagging the PreOT on the subject of copies, start some BT or BTs copying. You certainly don't ask for copies after every BT you blow, or as a routine step in the Valence Technique. Some auditors have tended to do this, probably by

carrying Date/Locating technique over into the Valence Technique. In any case you only handle copies when indicated, and not as a rote every time question.

SOMATICS

The original research on somatics was done in the late '50's in Washington, and I found how a somatic comes about. It's based on the fact that one being by himself couldn't have a somatic. You have to have two beings to have a somatic. A cluster can have a somatic. You wouldn't ask a question for a BT with a somatic, that would be a wrong question and is based on a false datum, and is an out-tech question. You could have two or more BTs smashed together somehow producing a somatic, but you would have to take up each of these BTs individually to blow them.

But usually about the only time you will run into a somatic in NOTs is when there has been an error. A wrong item, or something of that sort. It may be that a somatic in NOTs is always an indicator of an error. It seems to be so. And the wise auditor on NOTs should be alerted to the probability of an error of some kind if the Pre-OT does turn on a somatic. You can easily and quickly check for an error in what you have just been running in the session, or use a NOTs Repair List to locate and handle the BPC.

UNDERSTANDING

It is very essential that NOTs auditors and C/Ses understand the NOTs materials, and don't try to insist on a rote set of questions or steps, as NOTs doesn't run well as a rote or robotic rundown. There are very exact steps and manifestations and sequences and you will get these everytime. Anytime there have been flubbed cases on NOTs these have traced to MU's on the part of the auditor and/or C/S. The NOTs course checksheet was specifically designed to prevent this with Supervisor meter checks for MU words frequently throughout the checksheet. But there was an instance of a student who "skipped" the MU word check by the Supervisor, which is a sure route to catastrophe. Any trouble on NOTs has traced back to failure to clear words misunderstood in either the OT III materials or in the NOTs materials. This gives the solution to any auditor or C/S troubles with NOTs. Clear the MU words, and re-study the materials so that you do understand and can apply them. It will certainly make your life as an auditor or C/S much easier, and will enable you to get the rave results that NOTs is known for routinely.

SOCIOLOGICAL IMPACT

Have you considered the sociological impact that you are having by auditing NOTs? You are turning free beings loose in torrents. This is bound to have an effect on society, especially when these start picking up bodies and turn up to join the team at their local org! You are not just auditing one pc at this level, you are churning out cleared beings in volume, and we will start seeing the results sooner or later on society in general. Maybe you have thought about this too, it's nice to recognize the good effects you are creating!

NOTs OT DRUG RUNDOWN

(Ref: HCOB 29 Jan 80 THE OT DRUG RUNDOWN
WHICH MUST BE STUDIED PRIOR TO STUDYING
THIS HCOB.)

This issue adds to the OT III HCOB referenced above, and gives additional data and handlings which are limited to NOTs auditors and C/Ses, and which are for use on cases being audited on NOTs. (The OT III handlings of drugs can also be used on NOTs cases.)

As you know from NOTs data, BTs can be being anything. They can be being a particular drug, or being a drug picture or incident, or even an "acid trip" for example.

The way you would handle a NOTs case on drugs is similar in that you would first of all get the person through the Purification Rundown. A case already started on NOTs can be put onto the Purification RD without having been completed on NOTs, in fact, you may not be able to complete some cases without it. You do not have to take the case to a Rest Point. Just ensure that the case is not left incomplete (or messed up) on a specific action or category before starting the Purification RD. Then do not attempt to combine NOTs auditing with the Purification RD until it is completed.

Do not attempt to run Objective processes on a case during NOTs.

The caution of not asking for Drugs or Drug incidents generally also applies to NOTs auditing as such a question would result in a total restim.

What you can do is to add "Drugs" and "a BT being a drug", "a BT affected by drugs", "a BT being a drug trip", "a BT being a drug picture", into a prepared assessment or list.

You can check for a read on drugs on a specific BT or cluster, and then handle that

BT or cluster to a blow.

All of the data published on the subject of drugs and their effect in preventing case gain applies to BT's and cluster's cases.

Most commonly drugs have shown up on NOTs cases as either cluster-making incidents, or on individual BTs being the drug or affected by the drug, or copying other BT or cluster pictures of drugs.

Several cases who were stalled on NOTs or who were making minimal gain on NOTs have been resolved by handling drugs as described in this issue.

CASE HISTORIES

The following case histories (reported by FSO C/Ses), of case handlings done on NOTs Pre-OTs on drugs are limited to this issue as they contain NOTs techniques and data. These are additional case histories to those given in HCOB 29 Jan 80, THE OT DRUG RUNDOWN, (those cases were also piloted by NOTs auditors and C/Ses, but do not contain confidential NOTs data).

Case 1:

“Institutional case who had Sodium Pentathol as an anaesthetic just prior to ‘going nuts’ and then being put in an institution”.

“Running NOTs techniques on this drug, BTs stuck in this drug, BTs being this drug, BTs affected by this drug, turned the case sane.”

Case 2:

“LSD some 200 times. Had so far refused any standard Sweat Out program. Case gain totally hung fire on his attempts to get the perception he had when he took LSD.”

“From a GF 40 Expanded, drugs read heavily and his first gains from NOTs were achieved in handling cluster-making incidents from LSD trips, BTs/clusters stuck in LSD, being LSD, etc. This was run for approximately one intensive with Pre-OT interest. It didn't crack the case but some headway was made.”

(The next action for this case is to get him onto and through the Purification RD, then the full NOTs OT Drug RD.)

Case 3:

“LSD 220 to 250 times, and alcohol and other heavy street drugs. He was at a point where he could hardly walk or articulate”.

“Many cluster-making incidents on drugs, LSD, alcohol, were handled through the Rundown. Many were Reviv'd in past locations and some stuck there (i.e. physically)”.

“He cognited and BD'd on disturbing a pocket of acid held down by a BT. BTs/clusters restimulated by that were handled, then BTs/clusters stuck in drug trips and

copies of drug trips”.

“He started recovering physically. Articulation handled and walking improved”.

“On NOTs Series 34 handling of illness, alcohol was the item. His speech went back to normal after this - Pre-OT felt tremendous”.

“Lots of charge blown on BTs/clusters stuck in hospital drug (ACTH). Result of less numb, more sensation”.

“Later a NOTs Series 43 handling was done on alcohol, plus Date/Locate of a cumulative cluster on drugs. His responsibility increased and he was off on a persistent win for almost 2 weeks experiencing automatic/continuous blow phenomena in life”.

“Lots of ‘stuckness’ on the case was tied up in drugs and alcohol. Case is currently doing very well on the Purification RD”.

(Although the Purification RD would normally precede such drug handling in NOTs, this case was unable to walk or to talk due to paralysis and was considered incurable by the medicos.)

“There are also a number of Pre-OTs who have had NOTs Series 12 handlings on Drug RDs and some on drugs.”

NOTs OT DRUG RD PGM

The NOTs OT Drug RD Program is the same program as the OT Drug RD (HCOB 29 Jan 80 THE OT DRUG RUNDOWN). It begins with the Purification RD, it has the same Steps #1 - 5. But the method of handling is by NOTs Valence Technique, rather than Inc II, Inc I. Assessment for mutal incident is the same, but individuals from a broken up cluster would be handled with NOTs Valence Technique.

The categories of: “a BT or cluster being (reading drug)”, “a BT or cluster affected by (reading drug)”, “a BT being a drug trip”, “a BT being a drug picture”, “a BT or cluster being (mis-emotion)”, “a BT or cluster being (negative item)”, should also be checked for on each reading drug taken up, and these categories may be assessed as part of a prepared list, and should be so assessed at the end of Step 5.

Step 6 is different and would consist of a NOTs Series 24 Repair List assessed and handled, to clean up any loose ends and polish off the case, before returning to the NOTs Advance Program.

ADMINISTRATION AND DELIVERY

The OT Drug Rd may not be audited on Pre-OTs who have had any NOTs auditing,

these may only be run on the NOTs OT Drug RD.

Although the NOTs OT Drug RD is done by a NOTs auditor and NOTs C/S, these must be specially trained on the NOTs OT Drug RD and only interested, graduated NOTs auditors and C/Ses may be so trained. (These issues are not added to the ACS Courses, nor given to green NOTs auditors or C/Ses.)

The NOTs OT drug Rundown is not mixed in with the NOTs Advance Program, nor is it to be bit and pieced with NOTs, nor given as a blur along with NOTs. It is its own special RD and must be delivered as its own RD, and as its own package. This does not mean that you cannot use the item “drugs” in an assessment for a mutual incident during NOTs, nor that you couldn’t handle a BT hung up in a drug during NOTs. But if drugs or drug items are coming up during NOTs, then the case is on the wrong program and should be shifted over to the Purification RD, followed by the NOTs OT Drug RD. Then after these are done, you would resume the NOTs Advance Program. (As well as not mixing the hours on the NOTs OT Drug RD with NOTs hours, there is an important Technical reason for only handling one subject at a time and completing each action and program before starting another. (ref: C/S Series 38, C/S Series 47, & NOTs Series 30.)

One would not interrupt a Pre-OT who is running well on NOTs with good TA action and who is getting rapid blows, but would flatten the action before making a change to the Purification RD and the NOTs OT Drug RD. These Rundowns can be done at any point during the NOTs Advance Program, but ideally they would be entered after the “Past Auditing Repair” steps, or after step 14, after step 15, or at any point thereafter. If drugs are heavily charged and getting in the way, then you would have no choice but to shift programs to handle.

Ideally the NOTs OT Drug RD should be delivered by a specialist team of NOTs auditors and C/S, operating as a unit, who then feed completed cases back to regular and interning NOTs auditors.

The NOTs OT Drug Rundown should help you with cases who hung fire or were resistive previously as well as speeding gains and results on all cases.

The pilot results are excellent, and show what sort of gains can be attained.

AUDIT BTs CONCEPTUALLY

(References:

HCOB 26 Sep 78 I	WORD CLEARING AND INFORMATION FOR PRE-OTS ON NED FOR OTs
HCOB 12 Jan 80	ACKNOWLEDGING THE "ME" ANSWER
HCOB 27 Oct 79	VALENCE TECHNIQUE ADDITION
HCOB 17 Sep 78 I	VALENCES.)

(This HCOB adds to HCOB 26 Sep 78, Issue I, WORD CLEARING AND INFORMATION FOR PRE-OTS ON NED FOR OTs, and is to be used in the indoctrination of Pre-OTS on NED for OTs.)

When a Pre-OT looks at a BT and gets too laggardly, the BT often turns on a picture. The NOTs Pre-OT could think this picture was the What. It never is. The What BT is simply making a picture. Answers come through as concepts, not pictures.

The rule is: THE PRE-OT IGNORES THE PICTURE AND DOES THE ACTION IN CONCEPTS.

In NOTs one is not dealing with pictures, one is dealing with the basic of pictures. Pictures are a red herring - wrong target.

URGENT - IMPORTANT

NOTs WHAT/WHO L & N STEP

(References:

HCOB 27 Oct 79, NOTs Series 47, VALENCE TECHNIQUE ADDITION
HCOB 12 Jan 80, NOTs Series 49, ACKNOWLEDGING THE ME ANSWER.)

(This HCOB contains important revisions and additional instructions regarding the NOTS What/Who L & N Step, and modifies NOTs Series 47 and 49. It does not otherwise cancel or change the rest of the NOTs Valence Technique, nor does it change the rest of the NOTs procedures or Rundown. This issue must be thoroughly word cleared and star-rated along with the referenced issues by NOTs auditors and C/Ses to qualify them to use the NOTs What/Who L & N Step.)

THE RIGHT ITEM, ON THE WHAT L & N STEP

In NOTs Series 47 and 49 it is stated that you take "the first reading item" (regardless of its read). In experience I have found this not always to be true. One can get some small falls on several items before the real item is hit. Sometimes it requires an ack to get an F/N, but the real item always F/Ns.

(E-meter Note: If one were to use other than an operational Mark VI, one could be misled by the meter. I have noticed that what is a small fall (sF) on an operational Mark VI, is a fall (F) on another meter. This is not good, as the auditor seeing a fall (F), could think he has the item, when it is really a small fall. The exaggerated read makes one think wrong items have read when these only gave a small fall. Also, the Mark V tends to just F/N, and gives on the problem of trying to read through an F/N. The Mark V is not sensitive enough. Thus it is essential that an operational Mark VI is used. The sizes of reads referred to here are at the correct Sensitivity setting of one third dial drop on can squeeze per EM-5R.

The Sensitivity must not be higher than this during the What/Who L & N Steps.)

The statements in NOTs Series 47 and 49 under Step 3 (Acknowledgement) are correct and the only change here is in the statement that you take “the first reading item”, plus a clarification of size of read.

The right What? L & N Step reads are a lot of small falls preceding the right item. THE REAL ITEM ALWAYS F/Ns (even if it sometimes requires an ack to get it to F/N).

THE “WHO” STEP

(Early in the NOTs Rundown, and sometimes later in the Rundown, the being blows easily. Often before all the Valence Technique steps have been done, frequently blowing on inspection. There is the phenomenon (described in earlier NOTs issues) of the cyclic aspect of handling more difficult-to-blow BTs and clusters, followed by a series of easy/rapid blows. Later in the Rundown, after the more available and easier-to-blow BTs and clusters have gone, those remaining tend to be in worse shape as beings. You are then more frequently going to encounter the following phenomenon.)

The being seldom gets much of a read and seldom a blow on the first right answer to the Who? question. It gives an answer, the right answer (“Me”), in many cases and there’s no real read. What one does then is ack encouragingly and asks it to repeat the answer (“Me”). Thus encouraged, a BD F/N and blow on the repeated answer occurs.

PIN-POINTING ATTENTION

It is essential that the NOTs PreOT limits his/her attention to the BT/cluster being addressed. You can get a mish-mash if their attention goes onto something else. I have developed TR 8-Q (HCOB 22 Apr 80) which is an exercise in pin-pointing attention as well as asking a question. Requiring a NOTs PreOT to do TR 8-Q will remedy this.

REPAIR LISTS FOR L & N

There are two repair lists for L & N errors that are shorter than the L4BRA, and both of these can be used in NOTs. They are: HCOB 23 Sep 68 “Violation of the Laws of Listing and Nulling”, and HCOB 29 Sep 68 “List Correction” (Tech Vol XI, pages 44, 45), and either of these may be used, resorting to the longer L4BRA when necessary. The usual thing to do though would be to recognize what was wrong from the reads noted in W/Ss (or lack of F/N on the What? item), and handle accordingly and as given in earlier NOTs issues.

FES-ING

FESers and C/Ses must know the materials given in NOTs Series 47, 49 and this issue and must inspect worksheets to see whether correct (or wrong) items have been found, and whether the BT or cluster was blown. C/Ses must do this on every session, and FESers when they are looking for errors on a case. Any previous instances of failure to get the right item, or failure to handle a being to a blow can then be taken up in subsequent sessions and properly handled as described in this issue. If the BT/cluster is still around it will read when the PreOT’s attention is directed to that position (area) and oriented to the item given in that session. (Remember that it now may be Suppressed or Invalidated, and that the being probably has a Wrong Item and an Incomplete List.) If the error can be found and corrected immediately, do so (such as simply completing the list to correct item, and completing the steps on that being to blow), or, do one of the L & N Repair assessments to find what is wrong and then correct it and handle the being to blow.

AUDITOR AND C/S QUALIFICATIONS

The requirements for an auditor or C/S to use this NOTs L & N technique as given in NOTs Series 47 and 49 are very important and it is a High Crime to violate these. ONLY auditors and C/Ses who can L & N successfully may be permitted to use this technique, and then only after they have completed the stated requirements in NOTs 47, 49, the referenced materials and this issue. Until then, they may only use the other NOTs techniques, but not the L & N Step.

PROGRAMMING THE WHAT/WHO L & N STEP

Note that in NOTs Series 47, page 3, under "Warning" it is stated: "...it will be necessary to use this technique of listing for the item, at some point on any case being audited on NED for OTs,...". PreOTs being started on NOTs should not be put onto this technique at the beginning of the NOTs Advance Program, nor until the PreOT is well advanced through the Program. The other NOTs techniques are fully adequate and very successful and most of the NOTs 26R Program can be done before resorting to the NOTs L & N technique.

Only shift to the L & N procedure when the PreOT is well advanced through the Program and encounters the phenomenon described in NOTs 47, page 1. Early in the NOTs Program the case is fat with charge that will slough off easily and with the use of NOTs techniques other than the listing technique given in NOTs Series 47. On a case that has been prematurely started on the L & N Step, prefer to use the earlier NOTs techniques and do not overwork the L & N Step until the case is ready for it, (this doesn't mean that one would stop the L & N technique altogether on such a case).

When the case is ready for the NOTs What/Who L & N Step, and provided the auditor and C/S are qualified to run it, then the case is indoctrinated on the procedure and begun (per NOTs 47, 49 and this issue). If all the NOTs auditors and C/Ses are not fully qualified, then the PreOT could be reassigned when ready for the L & N Step.

In general most cases will follow the steps as laid out on NOTs 26R and 27, as this is the research/developmental sequence of NOTs and most cases will follow the same sequence and pattern and phenomena.

NOTs trainees should also follow this same sequence and only train on the later techniques after they have had experience and wins on auditing the earlier NOTs Program steps with the earlier techniques. Those are very easy to do, very rewarding and will enable the new NOTs auditor to gain familiarity and confidence.

C O N F I D E N T I A L

CLARIFICATION ON ACKNOWLEDGING IN THE
VALENCE TECHNIQUE

(Ref: NOTS Series 7, VALENCES)

It is very important that you have the Pre-OT acknowledge the answer the BT or cluster gives to the "What are you?" question (see NOTs Series 7). Even if you got an F/N on the answer, you still acknowledge and you will broaden the F/N.

We ask "Who are you?" to the same spot and we don't feed them the answer. They sometimes comm lag, (don't get impatient with the comm lag), sometimes it's a few seconds comm lag, and then you get the answer. You may have to repeat the question (see NOTs Series 7). The "Me" answer will normally LFBD, and if that LFBD isn't very marked, you make sure you do the next step of acknowledging the "Me" answer. In any event you could still acknowledge, but if the LFBD was pronounced the probability is that he's gone. The auditor having the Pre-OT acknowledge the "Me" answer can guarantee a blow. Now is this acknowledgement produces another read then we know it guaranteed a blow. Sometimes you get another LFBD on the acknowledgement step, and sometimes you get a broadening of the F/N.

CAUTIONS

Sometimes, quite often in fact, this short-circuits. You ask: "What are you?" and the guy says "Me" and blows. And sometimes you are patiently trying to go through all these steps and you get a series of blows. A blow or a series of blows can occur at any time during NOTs. You don't then continue the steps of this Technique, as that BT or cluster has gone! Sometimes a series of blows or an automatic blow will go into a Persistent F/N or a Floating Tone Arm and in either instance you would end off the session.

Also you can get repetitive blows if a case is running pretty clean, and you can get blows without BDs. There isn't much left on the charge and it isn't registering on the meter to amount to anything.

On “Hello and OK” you sometimes get a blow. The BT or cluster doesn’t answer up and run “Hellos and OKs” repetitively to get it into comm. Rarely, it will suddenly blow, and it would then be senseless to go on trying to run “Hello and OK”, or anything else, as that one has gone.

Some auditors have been known to ask a pc if it blew, during the Valence Technique steps. Even nag the Pre-OT, “Did it blow?”, “Has it gone?”, “Still around?”. This could be due to the auditor’s unfamiliarity with his meter, and not recognizing a blow when he sees it occur on the meter. Or, possibly some may have confused another technique, Date/Locate, with this technique. You of course always Date to blow, and Locate to blow, and the auditor could get the idea that he should carry over Date/Locate technique into Valence Technique.

It is very poor practice to ask the Pre-OT if it blew during NOTs Valence Technique. You could cause the BT or cluster to submerge or be suppressed, or you could invalidate a blow that did occur.

This doesn’t mean that you can’t ever ask if it blew. You could ask if it is “still around?” and a read would confirm that it is. But this type of question is asking for a missingness. It is no longer there. There’s a large percentage of pcs that never see the blow, and it isn’t something to see, because it’s a missingness. This type of question can be difficult for the Pre-OT to answer, as there is now nothing there for him to perceive as it has gone. If the meter BD’d and F/Ned on the “Me” step, it would be idiocy to then ask if it blew, of course it did! But if your meter didn’t tell you it blew, you could be in a quandary and have to solve that problem. But you wouldn’t interrupt the Valence Technique to ask if it blew, and you wouldn’t get into nagging the Pre-OT. You just follow on through with your steps, and particularly if you had the Pre-OT ask the “Me” answer, then you got your blow alright. So this concern about whether the BT blew is misplaced.

These points are stated so that the auditor will understand what he is doing, why he is doing it, and what manifestations he can expect to occur, because these manifestations will occur. This technique is a very positive series of steps, and they go in that sequence. If these steps are done as given, you will get the result, and if departed from or if there is an error, you can definitely expect to get that manifestation too, i.e. too broad an attention span and you will get restim.

It is necessary that the auditor and C/S understand these points as this is not a technique that can be done rotely or robotically.

VARYING THE AREAS

Session by session and item by item, when spotting something to list, it is best to work a different area than the last item.

This is true when there still seem to be more in the last area worked.

Example: one session, top of head; next session, even though head is slightly massy although one has blown, work, let's say, an area in the back where one is spotted. Then, that listed, handled and blown, one can go back to the head.

The operating rule that seems best is not to work the same area twice in succession.

One also must be sure to work behind as well as in front and from different angles from in front and behind. By continuing to work from the front only, on and on, builds up an imbalance that can increase duress.

One also must remember to not always work close in: from time to time check out areas that are as much as many feet from the body.

When one has worked one, two or three areas, one is likely to get a persistent F/N, very wide, and that is the time to lay off for now, end session and begin again later - in a few hours or next day. If you keep plugging on after a good win, you are actually overrunning a persistent F/N and it clears up by simply indicating that.

Forcing forward past a good win can give you a temporary pack up; so you actually make less progress than you would have if you short-sessioned as you are supposed to.

ADVANCED NOTs PROCEDURE

This is a debrief of a revision to the Church of Scientology's NOTs procedure which was released in 1985. I have not been able to evaluate the correctness of the procedure as I have not received any other debriefs at this time. I provide it for purposes of historical interest.

1. To locate the next being to run ask: "Where is the next being?"

You will get a read (sf, F, LF, LFBD) and you should get a telepathic "Here!"

If there is NO read ask:

HIDING?
HOLDING ON?
ATTACKING?
AFRAID?

One of these should read.

2. Locate WHERE.

3. Ask "What are you?"

Listen to a F, LF, LFBD by asking: "Is there another answer from the same spot?"

Acknowledge answer.

4. Then say: "When I ask you the question - 'Who are you?', what are you going to say?"

The being may say "George Washington"

Then you say: "That was ONE identity you had. Who are you REALLY?"

If the being says "A blood clot", you say: "Well that's a FALSE identity - Who are you REALLY?"

5. When the being replies "ME" you say: "ME is correct."

Then you say: "Now when I give you the question again, you give me the same answer and leave."

"WHO ARE YOU?"

If he doesn't go, ask him if he has a problem and handle until he blows.

HANDLING CORRECTION LISTS ON OTs

When you get a read on a correction list on an individual who is on OT III or above, you should find out from what area it is reading; i.e. find the position in relation to the body, of the BT or cluster on whom that correction list question read.

Otherwise, the reading correction list line gets assigned to all areas, when it only applied to one. This creates BPC as it gives the rest a wrong item or wrong indication, and it makes the reading question appear to be a generality, when in fact it only applied to one BT or cluster.

By finding the BT or cluster that the read applied to, the auditor then clears the read on that BT or cluster. And then the auditor takes any additional steps to get it to blow and blows it.

The above does not apply to cases below OT III and must never be mentioned to such a case.

There is a tendency of an auditor trained on general correction lists to simply clear the read without finding where it is coming from, and as this omission can jam up a case who is on OT III or on NOTs; such auditors when doing NOTs or actions on individuals OT III or above must learn to handle correction lists in this way. It can mean the difference between failure and success.

Qual Corrective Actions on OTs Series 3

C O N F I D E N T I A L

QUAL CORRECTIVE ACTIONS ON OTs

(Ref: C/S Series 107 AUDITOR ASSIGNMENT POLICIES,
CRAMMING ASSIGNMENT POLICIES
HCOB 22 Dec 79 FLYING RUDS AT OT III AND ABOVE)

The reason why it is necessary to have OT versions of the various Qual corrective actions is that an OT's case can be messed up if mis-audited or mis-crammed, and the purpose of Qual corrective actions is to improve or correct the staff member.

The major cause of trouble in seeking to correct OTs has been violations of the auditor assignment policy, whereby a person of lower case level than the OT was trying to audit or cram the OT. Not only does this put the OT on a withhold of confidential data, but a person of lower case level has no reality on the materials of the case level of the OT and can easily stir up aspects of the case that should have been left alone, or, if taken up handled fully. Additionally if the OT did get messed up, then he could only be repaired by using Repair actions appropriate to his case level. A non-OT III Cramming Officer or auditor could not possibly repair BPC on an OT III.

Where Cramming Officers have limited their actions to simply word clearing the materials that the person had gone past misunderstands on, it has worked out OK. But if the action being done led into the person's case then there is a liability of messed up case and ineffective staff member.

Some of the Qual corrective actions such as False Data Stripping and some of the questions on the Product Debug Checklist are not directed toward the person's post alone but are directed towards the person's case by asking about intentions or reactions or considerations or directing the person to recall past events. The statement: "I'm not auditing you.", doesn't prevent a case action from occurring if one then proceeds to ask auditing questions.

The worst repercussions of all have stemmed from offline case actions done as some sort of squirrely “2WC” which wasn’t a valid part of the cramming action anyway.

When subjective questions are asked one invariably is into a case action. Definition of “Subjective”: “Consultation with the preclear’s own universe, with his mock ups, and with his own thoughts and considerations.” (Book THE CREATION OF HUMAN ABILITY, p. 167.) “Recall, think, remember or return on the time track processes are subjective.” (HCOB 2 Nov 57RA.)

Subjective actions, especially when metered, lead into the person’s case. If mis-done, particularly if mis-metered, these can ball the case up.

OTs when correctly handled with the correct tech appropriate to their case level, handle very quickly and easily. So it is important to know what to do and what not to do.

The solution to this is in having specialized lists for OTs, and forbidding the use of non-OT actions on OTs, and forbidding non-OTs from seeking to audit or cram OTs.

REPAIR OF OTs MESSED UP IN CRAMMING

The most frequent cause of BPC encountered is:

- (a) Misownership,
- (b) Mismetering (false reads, missed reads and missed F/Ns),
- (c) Invalidation of state of case.

There are two types of action which are most likely to lead into an OT’s case and cause BPC:

- (i) Asking subjective questions,
- (ii) Asking “earlier similar?” (which sends the Pre-OT down the track, or down different tracks.)

There are ways to detect and isolate what happened in a mis-done cramming:

- The person crammed has “any” BIs about the cramming action;
- The person continues to goof in the same area or subject;
- The person Reg Tags on the cramming or within three days after the cramming action;
- The person gets sick, misemotional on the subject of the cram, or turns on somatics, within three days after the cramming action;
- The person is introverted on the subject of the cram;
- The person comes to next session after the cram with TA or needle behavior worsened from what it was prior to the cram, (such as TA used to be in normal range and now is high or low, or Sens setting for 1/3rd dial drop on can squeeze is now higher due to tighter needle, an unusual needle pattern has now appeared, etc.).

A sharp C/S can usually spot a mis-done cram from the worksheets of the cramming action and must insist that these are legible and accurate (ref: HCOB C/S Series 98 AUDITING FOLDERS, OMISSIONS IN COMPLETENESS).

When encountering any of the above, the C/S should make up a prepared assessment to cover points of possible error in the cramming action. Here is a sample assessment which can be used or added to:

1. R Factor: “I’m going to assess a list of possible errors which may have occurred in the (cramming action), to locate any BPC.”

2. Assess:

“Was there any misownership of charge?”

“Were significances or reads misowned?”

“Was there any mismetering?”

“Was a false read taken up?”

“Was there any cleaned clean?”

“Was a read missed?”

“Was an F/N missed?”

“Was there any invalidation of state of case?”

“Were subjective questions asked?”

“Were earlier similars asked for when these did not exist?”

“Were there any out-ruds?”

“Was there no help?”

(The above is a sample assessment which contains the most common items you are likely to find on mis-done cramming actions, especially on OTs, and the assessment above is designed for use on cases who are OT III or above only as it contains “misownership”, but a similar prepared assessment could be made up for a lower level case.)

3. Handle reads on the above assessment in accordance with HCOB 4 July 79 HANDLING CORRECTION LISTS ON OTs and HCOB 22 Dec 79 FLYING RUDS AT OT III AND ABOVE. This action alone may completely handle all the BPC, sometimes very rapidly and spectacularly.

4. If not fully handled with the above, assess and handle the appropriate correction list for the action that was messed up (i.e. WCCL - Word Clearing Correction List, for messed up word clearing, or L4BRA, etc.), handling the reads in accordance with HCOB 4 Jul 79 HANDLING CORRECTION LISTS ON OTs and HCOB 22 Dec 79 FLYING RUDS AT OT III Repair List (or if the person has been audited on NOTs, a NOTs Repair List).

ACTIONS THAT CAN BE DONE

There are actions that are OK to do in Cramming and will not get into the person's case. These relate to his post or study and are objective.

Definition of "Objective": "Of or having to do with a material object as distinguished from a mental concept, idea or belief" (Dictionary). "Means here and now objects in PT as opposed to 'subjective'." (HCOB 2 Nov 57RA.)

Questions or actions by the Cramming Officer which are objective and pertain to the person's post, the materials which cover his post, the materials he is studying, clearing words misunderstood, hatting actions and post or product debugs (provided subjective questions are not asked on OTs) are all OK.

The most usual and successful cramming action is simply to take the materials or text that covers the subject of the cramming order and word clear and cram those materials. This is always safe and OK to do. (The only other caution is not to give verbal data, nor to evaluate or invalidate or throw the person's ruds out while doing the cram!)

Word Clearing Methods 2, 3, 4, 5, 6, 7, 8, and 9 are OK to do on OTs (but not Method One, which asks for "earlier similar?").

Finding and clearing Crashing Misunderstood Wrods is OK.

Demonstrating meanings or words and terms and principles either with a demo kit or on Clay Table are OK.

Starrate checkouts on materials are OK.

Product Debug Tech is OK to do on OTs (provided the subjective questions on the assessments are omitted).

All of the actions given in this section can and should be used in Cramming, and these have no liability.

OTs when handled correctly in Cramming (or in auditing) are very fast and easy to handle, and correct very readily.

OT III AND OT III ATTEST

This issue changes the current handling of OT III and OT III attests and the next step after OT III. We want to end off “endless IIIs”. Starting now, AO C/Ses are to handle PreOTs on OT III as follows.

Let the person audit on OT III as long as he wishes. But at the first slackening or abandonment or EP or if he is just going on and on into “endless III”, look for a nice win and tell him that’s it and shunt him over to Audited NOTs.

An AO Review may be necessary before sending the person to attest. On an “endless III” or some of these people who have been incomplete on OT III or who have been on and off OT III for a long time, a Review would be necessary. The Review could be as short as an LDN OT III and Rehab their best win on OT III or as long as a C/S 53 to F/Ning list followed by an LDN OT III and then Rehab their best win on OT III. On some you might only need to find a nice win they had on OT III and indicate that that was it, or get it rehabbed in session (this would mainly apply to persons currently on OT III).

Some of this termination of III would depend on auditor availability for Audited NOTs , but if this is a situation the solution is to train up more NOTs auditors.

The whole intention here is to take PreOTs who have “completed” OT III per the above qualification and shunt them over to Audited NOTs.

Let’s start making OTs in VOLUME.
